The cases where a local authority fail to administer their by-laws or misinterpret them are comparatively rare, and the Committee went on to refer to what it found the much more frequent case, where a person fails to secure the passing of his plan, but is left in the dark as to how it is deemed to infringe the by-laws. It is pointed out in the Report that whilst under section 158 of the Public Health Act, 1875, the local authority must either approve or disapprove a plan within a month after submission, and cannot in law disapprove effectually unless the plan contravenes the by-laws or other legal provision in force in the district (Reg *v.* Newcastle-on-Tyne Corporation, 60 L.T. 963), yet the local authority are not bound to specify their reasons for disapproval and do not always do so. The builder has no enforceable right to be informed in what respect the plans are alleged to infringe the law, and this leaves him in the position that if he considers the refusal arbitrary he can go on with the building and risk a prosecution, or he must have recourse to the Courts either to obtain a mandamus to compel the authority to pass the plan, or to obtain a declaratory order that the plan complies with the law, a course he is always unwilling to take. The Committee therefore made the most important recommendation

that when a local authority rejects a plan they should be obliged to state the particular legal requirement, whether of statute or by-law, which it is alleged to contravene. This appears a most reasonable recommendation, for offenders against the law relating to matters of this nature should surely be informed what the offence is, and not be compelled to take legal proceedings to ascertain in what the offence consists, but, being informed, can then determine whether they have infringed the law and either at once comply with it or, if they consider the charge unfounded, take proceedings to vindicate their innocence.

In nine cases out of ten information on this subject would lead to an amicable arrangement by which the plans could be made to conform to the law. In some cases at present, the Report states, an interview with the Committee dealing with the matter is granted; but where it is not, the representations of the builder are filtered through a surveyor, whose own misinterpretation of the by-law or unauthorised requirements may be the cause of the whole difficulty. In connection with the suggestion of the Committee that an authorised statement should be made of the particulars in which the plan contravenes the law, they also indicated that all objections to plans should be taken at the same time, and that on re-submission no points ought to be raised except such as could not be raised on the original submission, and that if this recommendation is not already covered by section 158 of the Public Health Act, 1875, it might be secured by limiting the costs and penalties which could be imposed in respect of plans twice rejected, when one consideration could have been given to them. The machinery proposed by which the true meaning of a by-law could be ascertained in advance we must consider in our next article.

SOUTHEND MASTER BUILDERS' DINNER

At the annual dinner of the Master Builders' Association and the Builders' Merchants' Association at Southend on Tuesday of last week, the recently formed Southend-on-Sea and District Society of Architects was represented by Sir Charles Nicholson, its president. Mr. A. D. Jackson, chairman of the Master Builders' Association, took the chair, and was supported by Mr. L. H. Williams, president of the Builders' Merchants' Association, the Mayor and Mayoress, and others.

Giving the toast of "The Building Industry," Alderman Dowsett said the builders had set a fine example to the town by contributing £700 to the new hospital fund, and they would not be content till they had subscribed £1,000. By their enterprise also they had provided good homes and gardens for their employees. The builders had had a prosperous time, and he had heard the housing shortage had been caught up. As far as Southend was concerned, so long as the right type of houses were provided, the Corporation would do their part in providing spaces, &c.

Sir Charles Nicholson, responding, said some people believed architects were policemen who had to look after the builders. That was not his experience, however, as some of his best friends had been builders and their employees. He had been in different parts of the country and had always learned something from different builders with whom he had been in contact.

Mr. A. D. Jackson also responded.

The toast of "The County Borough of Southend-on-Sea" was proposed by Mr. L. H. Williams, and the Mayor responded.

The toast of "The Ladies and Visitors" was proposed by Mr. John Sumner, past president of the Master Builders' Association, and responses were made by Mrs. Godfrey Sorrell and Councillor H. J. Young.

COMPULSORY ACQUISITION OF LAND

In the recent case Hutton *v.* Attorney-General and Others (*The Times*, January 12) some novel points appear to have been decided.

The Secretary of State was seeking to acquire some land for the purposes of the War Office, and had given notice to treat under the Defence Act, 1842, and negotiations had ensued but apparently without success, and then proceedings were instituted to acquire the land compulsorily under the Acquisition of Land Act, 1919. The proceedings took the form of an application to the Court to stay the arbitration under that Act from being held on two grounds. Firstly, it was said that section 23 of the Act of 1842 made it a condition precedent before any step could be taken that a certificate should be given by the persons named in that section that it was necessary and expedient that the land should be acquired, and in thi case no notice had been given to the applicant that such a certificate had been granted by two Deputy Lieutenants of the North Riding of Yorkshire, and it had only come to his notice some months later. This it was alleged was material as both sides were entitled to be heard on the questions involved by the certificate, as the Lord Lieutenant or Deputy-Lieutenants exercised a judicial function. Secondly, under section 19 of the Act it was contended that it was a condition precedent to arbitration that possession should have been taken, and this had not been done.

It was contended on behalf of the plaintiff that unless the body named in section 23 were held to exercise judicial functions then the procedure prescribed by the Act would enable land to be acquired compulsorily without the owner having opportunity to raise the question whether it was necessary and expedient that the land should so be acquired.

The Court negatived both the above contentions. As to the first point, the Court pointed out that where judicial functions had to be performed the Act of 1842 provided for their performance by judicial officers with elaborate provisions as to precedure; that was the case under section 19, but under section 23 the persons selected were not judicial officers but persons who had military functions who might well be considered by Parliament as qualified to decide whether it was necessary and expedient that the land should be acquired. The certificate of that body was linked together with the warrant of the Treasury, and it was difficult to suppose that the Legislature should have left a matter of policy, possibly vital to the defence of the country, to be debated before a tribunal at the instance of a subject whose land was being acquired. The language of the Act did not compel the Court to come to any such conclusion as that contended for.

On the second point the Court held that section 19 did not make the power to call a jury depend upon possession having first been taken, but even if that had been so the matter was now governed by the Acquisition of Land (Assessment of Compensation) Act, 1919, which by section 7 provided that the provisions of the Act by which the land is authorised to be acquired shall in relation to the matters dealt with in this Act (the Act of 1919) have effect subject to this Act and so far as inconsistent with this Act those provisions shall cease to have effect.

The application, therefore, failed on both points, and as regards the first point we may mention that the Attorney-General in his argument pointed out that when the Act of 1842 was passed, and for some years afterwards, the Lord Lieutenant was head of the military forces of the County, and consequently the last person to be selected to act judicially between the War Office and a subject when land was required for military purposes, though a most suitable person to form an opinion on the necessity and desirability of its acquisition.

LAW REPORT

ESTATE AGENT AND HOUSE BUILDING: OBTAINING MONEY BY FALSE PRETENCES.

At Devon Assizes, on February 1, Horac Charles Terry (33), whose occupation wa given in the calendar as that of an estat agent, was charged with obtaining variou sums of money by false pretences. Th several charges against accused were as fol lows:—"Obtaining £26 from George Rook at Plymouth on April 16, 1925; obtaining £10 and a cheque for £180 from George Rooke o April 24; obtaining £168 from Albert Henr Rider on May 4; obtaining £80 from Arthu Hart on June 24; obtaining a cheque for £10 from Thomas Bazley on July 29; obtaining cheque for £250 from Thomas Bazley o August 20; and obtaining £100 from Alber Charters on August 28." Accused pleade not guilty.

Mr. Rayner Goddard, K.C., prosecuting said the cases could be divided into two classes In all of them prisoner got money as a deposi for building a house, but in some of them h not only got deposits for the building o houses, but induced people also to pay hi money for the plots of land upon which th houses were to be built and of which he repre sented himself to be the owner. Prisoner wa not in a position to carry out these contracts He did not own a rod of land in Plymouth and when he started business there he wa wholly impecunious, had no banking account and no plant, organisation or any means what ever for carrying on a building business. Th jury would be invited to say that this was on of those cases of a man carrying on a wholl bogus business. In concluding his openin speech, Counsel said that all accused care about was to snatch deposits and leave peopl with nothing except receipts and agreement

After other evidence for the prosecution ha been heard, Mr. G. D. Roberts, counsel fo the defence, intimated that he had an oppo tunity of talking with the prisoner, who, upo his advice, now desired to plead guilty to th first six counts of the indictment and n guilty to the seventh. Mr. Goddard said h was quite ready to accept this plea. He adde that there was a warrant out against prison from London in respect of four more charg of a similar character, and that there were s other charges against him in respect of whi the police proposed to take proceedings but which warrants had not yet been issued. I understood that prisoner desired all the charges to be taken into account.

For the prisoner, Mr. Roberts said his clie had acted wisely in pleading guilty, and had not gone into the witness box and co mitted perjury. Apart from the present ca little could be said against him, and it w clear that he had little or nothing to do w the activities of the British Economy Assoc tion, a concern with which the accused w alleged to have been connected. M Roberts submitted that even at Plymou accused made very little out of the frauds, there was abundant evidence that nearly the money was paid out in rent, expenses wages, and that this was not the case of man who had accumulated a secret hoard had callously defrauded his victims in orde line his own pockets.

Addressing the prisoner, Mr. Jus McCardie said that if he had not plea guilty there was no doubt that the jury wo have found him guilty. He would remem in accused's favour that there were no previ convictions against him and that he had gone into the witness box to commit wi and corrupt perjury. On the other hand th were outstanding charges against him, and frauds he had committed were grave, delibe and persistent, and a mere sentence of prisonment would not meet the gravity of case. Accused would therefore have to g penal servitude for three years, all the standing warrants and charges having taken into account.

NATIONAL ASSOCIATION OF SHOPFITTERS

ANNUAL DINNER.

THE annual dinner of this Association was held Thursday week last at the Restaurant ascati, when the President, Mr. G. A. Coulson, cupied the chair. The company included ssrs. E. W. King (President, National Federa- on of the Building Trades Employers), A. H. lamson (President, London Master Builders' sociation), E. J. Brown, E. Pollard (Vice- esident, National Association of Shopfitters), E. Speaight, L. Haskins, A. Haskins, J. F. oolton, H. A. Bowman, S. H. Short, W. C. lley, Cyril Lyons, L. Courtney, W. C. Pope, . R. Robbins, C. W. Cooke, W. E. Tamlin, W. Tamlin, B. M. Hickman, A. Edmonds, R. Cook, D. Hawes, F. W. Humphrey, B. osker, K. Green, W. J. Stockman, R. G. chards, A. L. Coulson, F. Walter, A. G. ulson, J. Dyson, T. E. Sellers, B. W. Blindell, T. Andrew, A. C. Caldicott, P. Josephs, M. J. rkin, Harold E. Pollard, and W. J. Rudder- m, Secretary.

The toast of "The King" having been noured.

Mr. E. W. King, proposing the toast of "The ational Association of Shopfitters," said the ssociation was a branch of the Builders' Federa- on, and a very highly respected one. Whose enefit did the shopfitters exist for? Not for emselves, nor for the public, but presumably r the shopkeepers, whose shops they made so tractive that they added greatly to the value the businesses concerned—he hoped without y loss to their good selves. The National ederation, he continued, was very proud of the opfitters' branch of its organisation; and if it ould ever be necessary for them (the Shop- ters) to come to the "National" in any ouble, the "National" would back them up every way possible. Some of them would ve heard what Mr. Hodges had to say last eek concerning the building industry; it was atifying to know that things were going well ith respect to labour. He did not know much out the shopfitters, but he noticed that they emed to have no labour troubles of any kind. ey seemed to get unlimited overtime, and tracted to their service the most adaptable en, who, so far as his observation had gone, d not worry themselves unduly about demar- tion rules. The shopfitters carried through eir jobs in a way that was a credit to the anch of the industry to which they belonged, d on his own behalf and on behalf of the deration which he represented he wished them ery prosperity.

The President, in reply, said that they of the opfitters' Association, under the wing of the ent body, felt that they had someone to whom y could turn if ever they were in real trouble. ey were especially glad to have with them t evening their good friend, Mr. E. J. Brown, o. in the early days, had encouraged them l helped them on their feet. The Association l now been in existence for over seven years. National Federation had watched over them matters affecting labour, and they were now king forward to good times ahead.

Ir. R. G. Richards, proposing the toast of he Visitors" (in place of Mr. J. E. Sheldon, was prevented from attending through position), said Mr. King had confessed to wing little about the shopfitters. He (the aker) could tell him that they were men who e cultivating the artistic taste of the public making the fortunes of other people for emely inadequate rewards.

r. A. H. Adamson, in reply, said the builders omed the close association with the shop- rs and would like to see a similar relationship ght into being with all branches of the stry. He had had personal experience of thorough way in which the shopfitters did work. Builders were always asking for time to complete a contract, but shop- s always seemed to be finished to time.

. C. E. Speaight also replied, and, after an eciative reference to the work of the ards, Mr. Josephs and Mr. Cook, in connec- tion with the dinner, compared the present friendly relationship of the shopfitters with the hostility and bad feeling that existed among them fifteen years ago. Mr. Coulson, their President, was the connecting link between them all. He had created friendships, smoothed over troubles, and patched up any difficulties that might have temporarily arisen.

Mr. H. A. Bowman, proposing the toast of "The President and Chairman," said that for seven years Mr. Coulson had occupied the post of President, and he (the speaker) sincerely hoped he would occupy it for another seven. Mr. Coulson was always ready to listen to the troubles and difficulties of the humblest among them, and they knew that when they went to him they would get sound advice. Under Mr. Coulson's presidency the Association had made great progress; a few firms still remained outside, but they would probably come in later on. They owed their President a great debt of gratitude for all that he had done for the Association.

Before replying to the toast, the President proposed a vote of thanks to the stewards, and Mr. Josephs briefly replied. Continuing, the President said that without the work of others, particularly of Mr. Sheldon and Mr. Pollard, the Association would never have held together. Coming together as friends, they had much more to gain than by standing apart as competitors. Mr. Pollard had been successful in opening up ways and means for the expansion of the shopfitting industry, which was under a great debt to him for the policy which he had initiated years ago. He had much pleasure in proposing the health of Mr. Pollard, their Vice-President.

Mr. Pollard, in the course of a brief reply, said they were all very much more "chummy" in the shopfitting world since the Association was formed, and in conclusion he stressed the benefit which they all received through association with the Master Builders.

Building Research.

A lecture on building research, arranged by the Manchester branch of the Institute of Builders, was given at the College of Technology recently by Dr. R. E. Stradling, director of building research, who, speaking chiefly for students of building practice, discussed the development of modern methods. Troubles in the building industry, he said, were the result of using methods, which, though they had been found best in the past, needed adaptation to meet changing conditions produced, for instance, by the smoky atmosphere of our towns and the vibrations of increasing road traffic. We had not yet developed a real science of building and building materials.

Bridge Builders.

At a recent luncheon of the Rotary Club of London the Rev. C. P. Hines read a paper on "The Romance of Bridges." In an interesting fashion he sketched the history of bridge building. Bridges, he said, were, comparatively speaking, modern in history, and the progress of civilisation might be measured by their length. There was no mention of any bridge in the Bible. The reason for man's delay in tackling the building of bridges was to be found in the superstitions which regarded rivers, gulfs, and oceans as having been placed by the gods to define the habitations of men and confine nationalities. Another ancient belief was that a river was either a god itself or the home of a god, and a bridge would deprive the god of the nourishment he was supposed to derive from the bodies of travellers drowned when crossing a ford. To propitiate the gods it was common in the early days of bridge building to sacrifice the aged and infirm, and often children, in order to pay toll for the lives saved by the bridges. To the present day the same idea prevailed in China, where it was a common practice to throw into the rivers puppets representing men bound hand and foot. The step from sacrificing to the river god to regarding the bridge itself as sacred was a short one, and soon the maintenance of bridges was regarded as a sacred duty.

BRISTOL ASSOCIATION OF BUILDING TRADES EMPLOYERS

MR. CONRAD K. COWLIN presided over the annual banquet of the Bristol Association of Building Trades Employers, held on February 1, at the Royal Hotel, Bristol. Amongst the guests were the Lord Mayor of Bristol, the Sheriff, the Bishop of Bristol, the President of the Chamber of Commerce, the President of the National Federation of Building Trades Employers, the President of the Bristol Society of Architects, the Director of the National Federation, and the President of the South-Western Federation.

The toast of "The National Federation of Building Trades Employers" was submitted by Mr. H. J. Rogers, President of the Chamber of Commerce, who spoke of the cordial relations existing between the local Association and the Chamber. The question of the relations between the employers' organisation and the workers was of enormous importance. Relations, he thought, between employers and employed were now better than at any time since the war, and he hoped they would improve.

The President of the National Federation, Mr. E. W. King, responding, said they would not like to see the wages in the building trades come down, but wished to see other trades so improved that the employers in them could pay higher wages to the men they employed. The building employers prided themselves on the working agreement they had got with the men. They had no anxiety at the moment with regard to labour. They wanted to do something advocated very much by Mr. Cowlin, increase the number of apprentices. All their trouble was caused by the shortage of labour in some of the trades, and as soon as they could overcome that it would have a stabilising effect, and things would be better all round.

Sir J. Walker Smith, who also replied, said in common with all sheltered trades the building trade wages were high. Building costs were not so low as they would like them, but he disagreed with those who were inclined to allocate the blame and responsibility to the employer.

Mr. C. F. W. Dening, President of the Bristol Society of Architects, responding to the toast of "Architects, Engineers and Surveyors," proposed by Mr. C. A. Hayes, said that never in the world's history had the financial aspect of building been such a ruling factor as to-day. That might be good business, but it generally resulted in bad building. Some day it would become a penal offence for country towns and cities to be defiled by those whose only object was to develop on the lowest standard at the highest cost. Craftsmen were not yet dead but were perilously near starvation.

"The Bristol Association" was submitted by the Sheriff; while the President, Mr. C. K. Cowlin, responding, said their Association was not a price-controlling association existing for the benefit of the builders. It was for the benefit of the building trade as a whole, and for all those dependent upon it, from the architect to the labourer. He believed that trade would pull through, and that better understanding and prosperity would come.

High Building Costs.

Sir Oswald Stoll applied on Tuesday at the Brighton Licensing Sessions for a renewal of the provisional grant of a licence for a proposed theatre and restaurant in West-street. He stated that owing to the inability to get possession of the site which he bought, and also owing to the tremendous rise in the cost of building materials, he had been unable to proceed with the work. He believed, however, that his chance would be in 1928, when the housing subsidy was likely to come to an end. The magistrates granted a renewal of the provisional licence.

RATES OF WAGES IN THE BUILDING TRADE

New Beet Sugar Factory in Lincolnshire.

One of the largest beet sugar factories in the country is to be erected at once at Bardney, near Lincoln, at an estimated cost of £552,000. It will have an initial capacity for dealing with 1,000 tons, rising to 1,400 tons per day. A contract has been signed between the Lincolnshire Beet Sugar Company and Sir Robert McAlpine & Sons, the contractors, and the work will be carried out under the supervision of the Dyer Company of America.

Life of the Modern House.

Speaking at the recent annual dinner of the National Federation of Property Owners and Ratepayers, Sir John W. Lorden said that the greatest number of houses at the present time was being produced by the private builder. Before the end of the current year there would be more houses built than could be sold or even let, and then what was going to happen to t Council houses? Every crank form of buildi had been tried, and some of the houses wou last thirty, some fifty years, and very few wou last the ninety-nine years of the lease. T speculative builder at least did build hous that would last out the term of the lease.

Bristol Power Station.

The scheme of Bristol Corporation for t construction of a super-power electrici generating station, involving an estimat expenditure of £1,000,000, is to be proceed with, the plans having received the approv of the Electricity Commissioners. The Ci Council have sanctioned the immediate placi of the necessary contracts. The main co tract for the construction and initial equipme of the station is to be placed with Mess Vickers, Ltd. The entire electrical plant w be supplied by the Metropolitan Vickers Ele trical Co. as sub-contractors. The schem provides for a station of an ultimate capaci of 280,000 kilowatts, equivalent of 375,000 h.p to be built at Portishead, on the Bristol Channe about seven miles from the city.

New Gladstone Dock at Liverpool.

Early this month the new Gladstone Do system at Liverpool, covering 36 acres, w flooded with 3,500,000 tons of water from t River Mersey. This marks the culminati point in a work of construction which has be in progress for many years. The new dock according to the *Times*, will be the finest a best equipped system in the world. The riv entrance is a massive piece of work with lar gates 130 ft. wide and a waterway of 1,070 f in length. For the building of the great qua walls, 63 ft. in height, more than 170,000 to of cement have been used. The quay syste of the Mersey will be extended by about thr miles when the Gladstone Dock is opened, a the largest vessels in the world, besides futu ships of even greater size, will be able to ta advantage of the accommodation provide The graving dock, which is 1,000 ft. long and capable of holding 200,000 tons of water, h created special interest. It can be used either a wet or dry dock and can be pump dry in two and a half hours by means of fi sets of centrifugal pumps and discharge pi 54 ft. in diameter.

Town Planning in East Sussex.

A conference of representatives of lo authorities of South-East Sussex was held Hastings recently, those taking part be representatives of the county borough Hastings, the municipal boroughs of Bexhill a Rye, the urban district of Battle, and the r districts of Battle, Hastings, Rye, and Ticehu These represented an area of about 151,0 acres, a population of 121,694, and a total ass able value of £980,613. It is hoped that a result of the meeting plans will be made for systematic development of the whole of so east England. The formation of a joint regio planning conference was recommended.

MR. T. ADAMS, the Hastings town-plann adviser, said that it was impossible to c adequately with the approaches to Hastings Bexhill without considering the extensive te tory round.

MR. G. L. PEPLER, chief town-plann inspector of the Ministry of Health, and a president of the Town Planning Institute, that with the help of the Institution of Munic and County Engineers, the regional plannin joint committees has made great strides in so east England. The proposed region was fu charming old towns, villages, and buildings in a lovely countryside that once destroyed c never be replaced.

Draft resolutions for the formation of a mittee to advise in the promotion, combina and linking-up of town-planning schemes in area were passed at a meeting of the council, and a preliminary scheme for improvements suggested by Mr. Adams, in ing a main road for through coastwise traff the back of the town, was adopted.

Housing (Rural Workers) Act, 1926.

The Scottish Board of Health has issued a circular, H. & T.P.8, relating to the above Act in as far as it is applicable to Scotland. Copies, price 1d. each, may be obtained from H.M. Stationery Office, 120, George-street, Edinburgh.

THE SCOTTISH BUILDER

NEW BUILDINGS IN SCOTLAND

Dundee.—THEATRE.—A new picture theatre is being erected at Hilltown, and Messrs. MacLaren, Soutar & Salmond, 15, South Tay-street, are the architects.—Plans are being prepared by Mr. W. M. Patrick, 26, Teaman Shore, for a dance hall in Nelson-street.

Dundee.—BUILDINGS.—Plans and sections of proposed new buildings, &c., have been lodged at the office of the City Engineer to be submitted to a meeting of the Works Committee of the Town Council:—Arbroath-road, bungalows for Mr. Wm. Black; Blackness-road, cottages for Mr. J. Cree (architects, Messrs. Johnston & Baxter, 31, Albert-square); Glamis-drive, bungalow for Messrs. Gauldie & Hardie.

Dunfermline. — EXTENSION. — Plans were passed at the Dean of Guild Court in connection with an extension scheme to Dunfermline and West Fife Hospital, which will entail an expenditure of between £46,000 and £50,000.

Dunoon. — ADDITIONS. — Plans have been passed for alterations and additions to Dunoon District Cottage Hospital, at an estimated cost of £5,300. The scheme includes an installation of electric light, an X-ray equipment, an operating theatre, laundry, garage, and lodge.

Duntocher.—HALL.—The Landward Committee of Old Kilpatrick Parish Council has decided to have a new public hall erected, the probable cost of which will be £4,500.

East Lothian.—HOUSING.—The East Lothian Standing Joint Committee has approved the following estimates:—Twelve houses at East Linton, eight of which are to cost £378 and four £460 each; one hundred three-room houses in the western district at £39,000. To meet grants for the improvement of rural cottages, it has been resolved to set aside a sum of £20,000.

Edinburgh.—VARIOUS.—The Dean of Guild Court has granted an application by Edinburgh Education Authority for permission to make additions and alterations to St. Anthony's School, Lochend-road, Leith. The scheme will cost £6,400. The reconstructed building, which will provide accommodation for 360 pupils, will consist of nine class-rooms, two science laboratories, and art, sewing, woodwork, cookery, and laundry rooms. The Education Authority were also granted warrant for the erection of two additional class-rooms at Trinity Academy, Leith. The following were granted:—City—tramway shelter at corner of Easter-road and Duke-street, Leith; City—store at Thorny bank; City—alterations to public washhouse, Greenside-row; Mr. P. Forbes and another, two bungalows at Craigleith-road; Messrs. M'Kendrick & Co., six bungalows at Corstorphine Park-gardens; Mr. W. S. Wilson, double house at Queensferry-road, Blackhall; Mr. A. Forbes, four bungalows and garages behind Blinkbonny-crescent; Mr. P. Mackenzie, four houses and four garages at corner of Ladysmith road, and Observatory-road; Mr. W. Swan, two tenements of shops and houses at Restalrig road, Leith; Mr. R. Wallace, two bungalows at 2 and 4, Kekewich-avenue, Craigentinny; the Rev. H. G. Graham and another, hall at Ferry road.—The Business Committee of the Public Library have reported on a proposed addition to the Morningside Library. The proposal is to extend the ground floor of the library, and the cost of this addition is estimated at about £1,500. The City Architect is to submit a report regarding the proposal.—The Burgh Engineer has reported on the £14,000 scheme for a new outfall sewer at the west end of Corstorphine.

Greenock.—HOUSING.—The Corporation has passed a resolution to proceed with the erection of 162 new houses at the Bow Farm.

Glasgow. — CINEMA. — Messrs. Lennox & McMath, 103, Bath-street, are the architects for the new cinema to be erected in Keppochhill road, Springburn.

Kirkcaldy.—HOUSING.—An inquiry has been opened in Kirkcaldy under the Housing (Scotland) Act, Part 2 (1925), under which the Corporation have sought powers to promote a scheme of slum clearance and town improvement.

Montrose.—BRIDGE.—A joint conference has been held between the members of the Montrose Town Council and representatives of Forfar County Road Board, to consider the question of design and material for the proposed new bridge over the South Esk at Montrose. The joint consulting engineers, Sir Owen William, London, and Mr. Hogg, jun., of Messrs. Crouch & Hogg, Glasgow, were present. The former submitted a design of a proposed reinforced ferro-concrete structure providing for a 20 ft. roadway and two 8 ft. footpaths, at an estimated all-in cost of about £74,000, with £4,000 additional for an extra 5 ft. roadway if required. Messrs. Crouch & Hogg's plan of a steel girder bridge, with 20 ft. roadway and two 8 ft. footpaths, was estimated to cost £80,000.

Selkirk.—HOSPITAL.—A movement has been initiated in Selkirk for the provision of a cottage hospital. An institution for medical and maternity cases is estimated to cost £3,000, and an operating theatre and X-ray apparatus will cost £1,500 more.

Aberdeen and Town Planning.

Under the scheme of the Town-Planning Committee of the Aberdeen Town Council for educating the public in the development of cities, and for stimulating their appreciation of the beauties of their city, a lecture is to be given by Mr. G. Topham Forrest, F.R.I.B.A., Architect-in-Chief to the London County Council, in the Cowdray Hall, on March 3. Mr. Forrest's subject is to be "Guiding and Guarding the City," and he will deal with the development of areas not yet built on, the redevelopment of built-up areas, and the preservation of the historical parts of the city.

BUILDING TRADE WAGES IN SCOTLAND.*

THE following are the present rates of wages in the building trade in the principal towns of Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur:—

	Masons.	Bricklayers.	Carpenters, Joiners.	Plasterers.	Slaters.	Plumbers.	Painters.	Labourers—Masons', Bricklayers' Plasterers'.

* These prices apply to *new buildings only*. They cover superintendence by foreman and carry a profit of 10 % on the prime cost without establishment charges. A percentage of 1½ should be added for Employers' Liability and National Health and Unemployment Acts and from 1s 6d. per £100 for Fire Insurance. The whole of the information given on this page is copyright.

TRADE NEWS

Industrial Engines.

Messrs. Tangyes, Ltd., of Cornwall Works, Birmingham, illustrate many types of their fuel-oil and heavy-oil engines in their latest Catalogue 318, which will be supplied upon request. A feature of these engines is that they can be made interchangeable, to consume either liquid or gaseous fuels.

"The Crown Journal."

We have received the January issue of this journal, which is the house publication of Messrs. Higgs & Hill, Ltd. Among other interesting matter it contains a description of the new Park-lane Hotel, W., for which Messrs. Higgs & Hill were the general contractors, and which we illustrated in our last issue.

Cast and Wrought Iron Boilers.

We understand that Messrs. O. Bruster and Richardson, of 4, Lloyds-avenue, E.C.3, have taken a stand at the British Industries Fair at Birmingham, where they will maintain working exhibits of their new "Junior Glow-worm" boiler, and also of a new open coke fire with back boiler. Other of their products will also be on view. We are further informed that the prices of "Glow-Worm" products have been reduced in price to the rates prevailing prior to December 1, 1926.

Better Roads.

Messrs. William Shepherd & Sons, Ltd., of Milkstone, Rochdale, have published their January issue of *Shepherd's N.E.W.S.* This interesting little journal, which will be sent upon application, contains details of many of the contracts for road-making which are being handled by this firm, and on which they are using their "asphaltic slag." Messrs. Shepherd also manufacture "Shepfast" for laying wood-block and boarded floors. It is guaranteed to prevent dry-rot.

An Old-established Firm.

An interesting function took place on Saturday, January 22, at the London Tavern, Fenchurch-street, E.C., when, to celebrate the completion of the 180th year of the firm's existence, the directors of Messrs. Joseph Chater & Sons, Ltd., entertained the staff and employees at dinner. In asking the company to drink prosperity to the firm, the chairman, Mr. Leathley Chater, said that although there might be older houses in existence in the City of London, he did not think there were many who could boast of 180 years on the same site, the firm having had business premises on St. Dunstan's Hill since 1746, the year of its foundation. Mr. Guy Chater mentioned that during the General Strike not a single man came out, and further stated that the extension of the firm's premises at Limehouse was now well in hand, and he confidently hoped that, when complete, it would enable them to expand the business with beneficial results to all concerned.

British Industries Fair, Birmingham.

From February 21 to March 4, in every part of the "Six Acre Workshop" which constitutes this year's national display of heavy goods, there will be demonstrations of new ways of doing things. Among working exhibits with a more particular appeal to contractors, engineers and works managers will be seen new types of hand screwing machines for bolts; stone crushers and concrete-mixing machines; engineering plant made in different varieties of stainless steel and iron; electric drills of special design for use in confined situations, and the "cheapest power pump in the world."

Messrs. Ruston & Hornsby, Ltd., of Lincoln, will maintain a running exhibit of a "Ruston" Cold Starting Horizontal Oil Engine, Mark 13H, 130 B.H.P. Horizontal engines of this type are made in sizes from 16–340 B.H.P. The engines run, without alteration, on a wide range of fuel oils, including the cheapest oils, such as fuel oil of .95 specific gravity. Special features of this engine are, we understand, a guaranteed low consumption, ability to start from cold under any conditions, low cost of maintenance, continuous operation over long periods, and ease and facility of handling.

ESTIMATING ON RIGHT LINES

Everyone whose business it is to quote for building work should master the principles upon which estimating is based. These principles are clearly explained and illustrated in

'HOW TO ESTIMATE'

by J. T. REA,

a unique and invaluable work which is not excelled in thoroughness or in scope by any similar book known.

Fourth edition (now ready). 540 pages. Price 15s. net (by post 15s. 9d.). Containing thousands of prices and hundreds of examples of analysis, showing how a builder can make up rates for himself. In view of the difficulty of fixing standard prices under present conditions, the author has included an important series of Adaptation Tables and Percentages corrected to February, 1926), *which show how rates may be adjusted to meet variations at any time.*

Before purchasing any other book on this vitally important subject, you are invited to inspect this—the standard work which is in use by over 30,000 builders.

A COPY WILL BE SENT BY RETURN, AND YOUR REMITTANCE REFUNDED IF THE BOOK DOES NOT SATISFY YOUR REQUIREMENTS.

B. T. BATSFORD, LTD.
Publishers, 94, High Holborn, London, W.C.1

THE BUILDER

JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

XXII.—No. 4385. FEBRUARY 18, 1927

THE CHARM OF RURAL ENGLAND

'ATTERED far and wide over that green and pleasant countryside (which always tugs at the heart strings of the returned traveller) are those jewels, the stately manors and the pleasant farmsteads, the villages and hamlets, and the homely cottages of our homeland. o, when we see these links with our forefathers dis- n, or threatened with destruction, is the full appre- o their place and part in our heritage coming to us; a it would be more accurate to say that only now is p nbconscious tie which has always linked us to these l things revealing its real strength. What is the f is charm? It is not merely architecture, the honest o inary things—stone, brick, or timber—in the right t not only the appeal of their picturesque unexpected- te charm of their colouring which makes these old g dear to us.

e han this, but comprising these appeals to eye and a ling, we are instinctively attracted by that inherent hich expresses the characteristics of the race, and li s us with the England of Shakespeare, Elizabeth, or e ype of the solid, dignified comfort of the eighteenth . In these old villages we may see something of their te or analyse, as far as may be done, the elements which, ne give us this impression of English charm and grace, o nderstand better the way in which each uncon- l, nd perhaps fortuitous, group of houses around a g en or on each side of the main street may not be t mpered with if that charm is to be preserved.

fe counties in England are there a greater number of illges where the vandalistic hand of the modern builder t t commenced the work of destruction than in Essex. c tre of that county near to Chelmsford, lies such a —Trittle—not altogether unspoiled, yet having so a haracter that up to the present time the ugliness of f he buildings, erected after the traditions of honest g nd quiet unpretentious design had been lost, have s ed its essential charm. Here, in the centre of the i a large irregularly shaped but more or less triangular n '-free and open, bounded on one side by a main wh to the north and east are an irregular line of ancient a d cottages, and in the background further to the so e old yews, and the roof and tower of the old church h eview.

fit impression one has is that of repose—a definite, d ed peacefulness which envelops not only the varied t tly dissimilar buildings, but also one or two cottages s dable vulgarity, which somehow sink to insignificance g eral impression of the whole. If we try to analyse u pission it appears to be due (rather paradoxically) to k uniformity firstly in the irregular and slightly sloping itself, which for this reason seems bigger than it actually f condly to the fact that the older buildings all have o ontal lines, and are not built on a "building line" in the actual boundaries of the Green itself, but are te from it, firstly by a narrow strip of roadway, itself a n width, and next by an approximately equal width o garden." Some have hedges, some trees, but like o d of an old Persian carpet; these roughly parallel a y lines give a certain cohesion to the whole. They th green and the houses which surround its two sides n t entity.

c nrast is provided by the third side. Here we have first n t line of demarcation provided by the tarmac toad a beyond there is a "building line"; the gardens are v s ips and have, for the most part, railings of unpleasant . he cottages themselves are pleasant enough—of a more or less Georgian type, with a sprinkling of modern red brick. Yet this side is no longer part of "the green"; it stands as a thing apart, characterless as a whole, not beautiful nor hideous, but rather negative and negligible. Had there been no modern rebuilding its character would have been preserved, but this is not sufficiently marked to overpower the dull fatuity of the work of the last century.

Standing nearly in the centre of the south-east side of the green is "St. Albyns," an ancient timbered house, which is the sole unaltered survivor of the type of house which originally surrounded the open space. It is in surprisingly good condition, and is thus described in the report of the Royal Commission on Historical Monuments for the county of Essex:—". . . . a house 70 yards north of the church, is of two stories, timber-framed and plastered; the roofs are tiled. It was built *c.* 1500 on an L-shaped plan, with wings extending towards the E. and S. The main block had a hall in the middle and cross-wings at each end. On the north front the upper story projects at the ends of the cross-wings, and the projection is continued along the west side of the building; at the angle is a heavy diagonal bracket, springing from a moulded capital. The timber-framing is mostly exposed. On the west side are three original openings, now blocked, and with four centred heads and foliated spandrels. Further south is an original doorway with three centred head and sunk spandrels; it appears to have been formerly fitted with a grating. Inside the building are several original doorways with four centred heads and a door made up of sixteenth-century panelling. The former hall has original and richly-moulded ceiling beams and joists and one original window of two lights, now blocked. The rooms in the cross-wings have ceiling beams with curved braces forming four centred arches. On the first floor are remains of two original windows and cambered tie beams with arched traces and one king post."

The present owner of "St. Albyns" is well known as an authority on the subject of restoration and he proposes to undertake the reconditioning of the house, not by the usual procedure of a contract, but by the method of employing local labour, with the assistance of skilled craftsmen where necessary, to carry out the restoration bit by bit as the examination of the old work to the minutest detail reveals what previously existed. Thus the illustration, which we give this week, does not represent more than the first stage in this restoration—a visualisation of the gable end as a whole, but subject to revision in detail. It appears certain that the cross-wing to the west adjoining the footpath leading to the church was originally a shop. It probably had no glass in the windows, which show traces of the primitive diagonal wooden bars and the shutters which closed the openings at night. Above was probably the merchant's counting-house, with a small stair leading to the shop below. At a later stage the main part of the house was divided into three small cottages, and various internal alterations were made, including a stairway cut out of the old hall, while a portion of the eastern cross-wing was pulled down or removed owing to its being in a bad state of repair. Old fire-places have been bricked up and new windows cut in various places and other mutilations carried out at various times, but enough original work still remains to make a complete and accurate restoration possible, though this demands infinite patience and considerable knowledge.

But the method of thorough and painstaking investigation of even the slightest clue is no doubt the right one to follow, and one could wish that all owners would devote their time and talents to such good purpose with that measure of assistance from an architect which one feels confident would always be forthcoming to assist in the preservation of the architectural treasures of rural England.

NOTES

The Gold Medallist.

IT will be generally agreed that the Royal Gold Medal will be rightly bestowed on Sir Herbert Baker, A.R.A., who has earned a wide reputation by many prominent works since he first began to be known through his association with Cecil Rhodes. As architect for the new Bank of England and great Government buildings in India and South Africa, Sir Herbert has secured some of the prizes of the profession, and the full list of his activities would be a long one. Force and dignity have marked much of what he has done, and we shall probably hear some critical appraisement of his work when the medal is presented.

The Registration of Architects.

WE cannot think that a past-President of the Royal Institute of British Architects would have officially countenanced the autocratic power of an architect which, in his letter to the *Times*, Prof. Prior credits him with upholding. The employment of an architect by his client carries with it a sort of obligation to follow his advice and abide by his decisions, and the agreement and contract entered into between the client and the builder gives a large measure of authority to the architect. But the public would, we imagine, hesitate to place in the hands of an architect the autocratic control which Professor Prior's words suggest. Behind all the claims which may be fairly upheld for the status of the architect, we cannot forget that his chief value should lie in his artistic vision, and if he possesses nothing of this he cannot lay claim to the full and proper conception of an architect. We doubt not that most of the public look upon the practical and utilitarian services of an architect as his most valuable attribution—and we must admit that there are those who have nothing more to offer. To make a close corporation of a body of men who by education and examination can qualify for the practical side of this work, the opponents of registration will probably concede. But, as we understand it, they maintain it is unthinkable to make a close corporation of artists.

The Belief in Registration.

BUT a large majority of the members of the Institute have agreed to the principle of Registration by Act of Parliament, and the ultimate admission to their ranks of those only who have received an architectural education and who can pass a qualifying examination. They believe—and the belief is shared by many of our leading architect will be a distinct gain if the titl tect is used only by those received architectural training, education and examination will to limit or obliterate the artisti of a man. A Registration Act give architects all they hope fo it may even provide disappoi but on this question of title, R should provide some protectio public as well as the architect, does not, would the public or fession be worse off than the day?

Unfair Tendering.

IT is not easy estimate the final unfair tendering fo work. In a perti which we publish to-day (p. 296) appears to think that much m is done than the mere bankr those who aim to secure co impossible prices. Sir Harry Lau duces us to a joiner who has ju a contract, and says: you alwa a contract; and he is probabl from the truth. With the un in the labour market, it must n courage for builders to put down competitive price. But it is to that better education will sho coming generation of builders

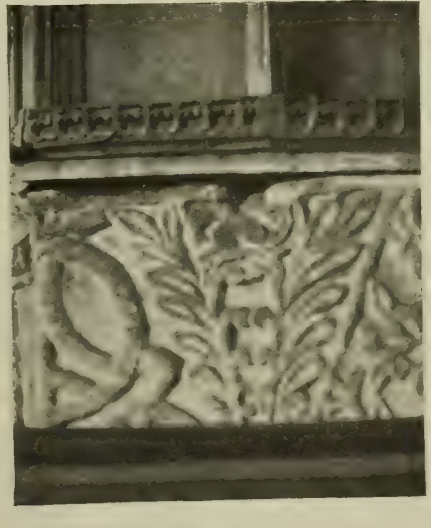
PENTLOW CHURCH, near the Suffolk border of Essex, formerly dedicated to St. George, now called St. 's, has the distinction of possessing ly one of the half-dozen round in this county, but also an apsidal d. It is considered by some that ver was a later addition to the church, but evidence of the nship suggests that nave, apse, nd font are all of early twelfth- date. The square font, of which ree sides are visible, the fourth nfortunately built into the wall, e example of elaborate carving, olonnette at all the angles. Each worked with varied designs of ork, foliage, linked circles and astronomical symbols. The face has a quite symmetrical f considerable intricacy, while the aces, though possessing a pro- centre line in their design, are ed exactly similarly on both sides e two halves of both designs are, cleverly balanced. A fifteenth- wooden cover of octagonal shape,

Pentlow Church, Essex.



surmounts, somewhat incongruously, the square font, which is not set upon a rough brick base. Other points of interest, dating from later times, are the fourteenth-century piscina, with trefoil head and basin, two sixteenth-century niches, possibly intended to hold lights, and the alabaster monuments in the Kempe chapel.

Fog Penetration.

ULTRA-VIOLET rays have for years enjoyed undisputed sway among the mysterious "dark light rays" in the public imagination. Mr. Baird, the inventor of television, has now brought the infra-red into at least equal prominence. In his earlier experiments at television the sitter at the transmitting end had to be bombarded by so fierce a glare of light that Mr. Baird decided that it was necessary to employ some dark ray. Ultra-violet light failed him on account of its lack of penetrating power and its injurious effects upon the eye, but where the short wave ultra-violet failed the more kindly infra-red, with its long wave length and far greater penetrating power, succeeded, hence the success of television. The effects of the penetrating power of infra-red rays will be tremendous, and it is curious that we have not used lights leaning more towards the red for street lighting in our fog-bound cities. We all know that the sun appears blood-red in a fog because only the red rays can get through their penetrating power, being some sixteen times as great as that of violet rays, and correspondingly in excess of that of blue and green. The infra-red beam will, no doubt, revolutionise shipping, but the power of human vision in a fog might be greatly increased by the use of visible red light.

GENERAL NEWS

Professional Announcement.

Mr. J. D. Hossack, A.R.I.B.A., lately with Messrs. Mewès & Davis as a senior assistant architect, has entered into partnership with Messrs. North, Robin and Wilsdon, F. and A.R.I.B.A., of 35–39, Maddox-street, W.

Preservation of Ancient Cottages.

The Surveyors' Institution has contributed fifty guineas to the Royal Society of Arts Fund for the preservation of ancient cottages.

Royal Scottish Academy.

Mr. S. J. Peploe, A.R.S.A., Edinburgh, has been elected to fill the vacancy in the ranks of R.S. Academicians caused by the death of Mr. Edwin Alexander.

New Severn Bridge.

The Salop County Council, it is understood, will shortly put in hand the construction of a new reinforced concrete bridge to carry the London-Holyhead road over the Severn at Atcham three miles east of Shrewsbury.

Surveyor's Estate.

Mr. Frederick Henry Appleton Hardcastle, F.S.I., of Clyde-street, Redcliffe-gardens, S.W., who died on November 26, aged 80, left estate of the gross value of £12,051, with net personalty £11,930.

Institution of Structural Engineers.

At an extraordinary general meeting held at its premises at Upper Belgrave-street, the members of the Institution of Structural Engineers decided to petition the Privy Council for the grant of a Royal Charter of incorporation.

The Tarpeian Rock.

Excavation work, it is understood, is about to be commenced with a view to revealing the Tarpeian Rock. This famous rock will eventually appear in the identical form which it possessed in ancient times, since it has not been altered in any way by subsequent building.

City Church Ancient Lights.

The rector and churchwardens of the Church of St. Edmund, King and Martyr, Lombard-street, are relinquishing their right to ancient lights in the neighbourhood to the Commercial Bank of Scotland, Birchin-lane, which overlooks the churchyard, for the sum of £1,750.

Renovation of Historic Inn.

The historic George Inn, at Norton St. Philip, Somersetshire, which is said to be the oldest village inn in the country, its licence dating from 1397, is at present undergoing renovation under the advice of the Society for the Preservation of Ancient Buildings.

The New Guildhall.

The scheme formulated by Sir Banister Fletcher, V.-P.R.I.B.A., for the reconstruction of the Guildhall, E.C., whose own design was published in *The Builder* for October 8, may be organised into a competition for the best design by the Court of Common Council in consultation with the R.I.B.A.

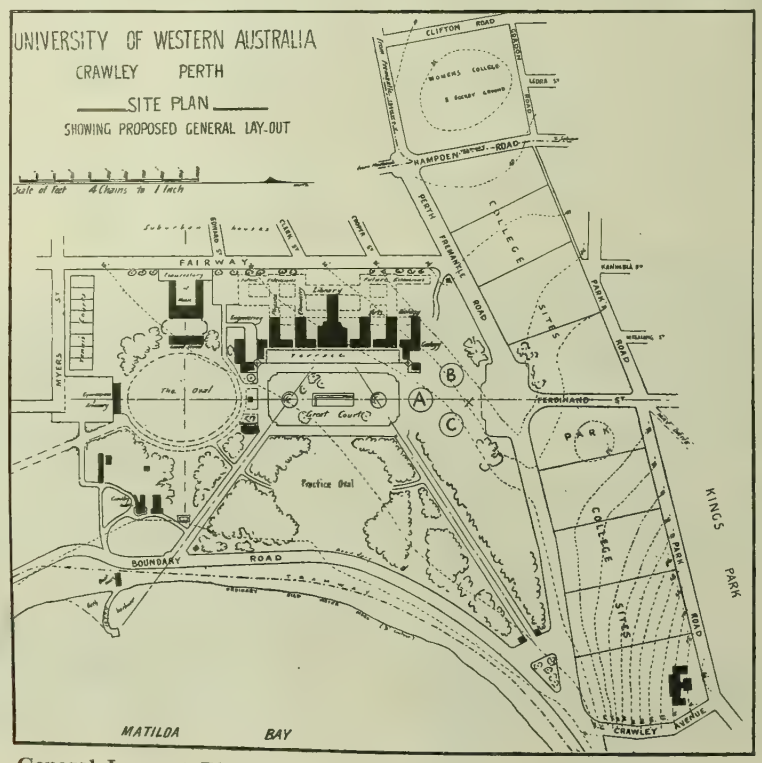
Fine for Marring a View.

A firm of Cardiff brewers were fined £1 and £5 costs at Cowbridge recently for exhibiting an advertisement which, it was contended, disfigured the natural beauty of the landscape. It was stated the sign, which was about 15 ft. high, was placed off the main road between Cardiff and Cowbridge in the Vale of Glamorgan.

War Memorial on Mount of Olives.

The Imperial War Graves Commission announce that the construction of the war cemetery at Jerusalem on the Mount of Olives is nearing completion, and that the memorial will be unveiled by Field-Marshal Lord Allenby, on Saturday, May 7 next.

The chapel memorial and cemetery have been designed by Sir John Burnet, R.A. The mosaic work is the design of Mr. R. Anning Bell, R.A., and the sculpture work of Mr. Gilbert Bayes, R.S.B.S.



OBITUARY

Mr. William Holditch Stevens.

We regret to record the death, at the age of eighty-two, of Mr. William Holditch Stevens, Mr. Stevens served his pupilage in his father's office in Torquay, coming to London in 1868, when he entered the office of the late T. E. Knightly, architect, and district surveyor for Hammersmith. Here he remained for over twenty years. He obtained his certificate of competency in 1876, and for 16 years acted as deputy until the death of his chief in 1904. Pending the appointment of the new surveyor, he was appointed Interim District Surveyor, and held the post from 1904 till 1907. Having reached the age limit, he was unable to appointment to a district, but was aw the post of Interim District Surveyo Streatham West, and this he held from till 1910. In construction, writes a corr dent, he had many sound and practical and many an architect and builder wh sulted him in the course of his duti reason to be grateful for his courtes advice.

Mr. G. Sutherland.

The death has occurred in Aberde Mr. George Sutherland, F.R.I.B.A., partner of the firm of Sutherland & (architects, of 26, Crown-street. Mr. Suth was sixty-five years of age.

General Lay-out Plan, University of Western Australia Competition.

COMPETITION NE

Grammar School, Bradford.

The Governors of Bradford Grammar invite competitive designs from architect proposed new school for 1,000 boys. University of Western Australia.

This competition, the block plan of wh give this week on this page, is being condu the expressed wish of the late Sir John Wi Hackett, first Chancellor of the Univer Western Australia, who, by his mu bequest, has laid upon the Senate the re bility of erecting a University centre whi embody the testator's ideal as to "the ance of fine buildings in the education and ment of the citizens of a State." It is building to be known as "Winthrop especially that this ideal should be r All is to be left to the unfettered discre the designer. He is asked to record his tion of an ideal type of building for a Un group to be erected by a British commu a climate and setting which may perh best described as "Mediterranean." intended that the winning design shall type for all future buildings which r erected on the site. Further particula given in our issue of February 4.

Henry Saxon Snell Essay Prize.

The Henry Saxon Snell prize of the Sanitary Institute for 1927 (Fifty Guin the Medal of the Institute) is offered essay on "Sanitary Accommodation, Ap and Fittings, for Hotels and Flats, w gestions as to proper placing, arran ventilation and lighting, particularly there are no external walls in which v can be placed." The essay is to consis more than 5,000 words, to be typewri foolscap, one side only, and to be illu by drawings or sketches. Two competit combine in sending in an essay and di Essays must be delivered on or befo tember 30, addressed to the Secretary Royal Sanitary Institute, 90, Buck Palace-road, London, S.W.1, from further particulars may be obtained.

Practical Homes Competition.

The proprietors of *The Lady* propose a Practical Homes Competition, in co with which an exhibition will be Angmering-on-Sea, Sussex, from Octo October 8. Prizes will be awarded as Class A—Houses or bungalows costing than £1,200; prize £250. Class B—H bungalows costing not less than £800, r than £1,200; prize £150. Class C— or bungalows costing not less than £ more than £800; prize £100. Furth and medals will be offered for fu fittings, and garden lay-outs. Full pa and conditions of entry may be obt application to "Moira," at *The Lady* 39 and 40, Bedford-street, Strand, Lond

Proposed Restoration of Gable End, Saint Albyn's, Writtle, Essex.

Lt.-Col. H. P. Cart de Lafontaine, Architect.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Architectural Schools.

Sir,—As chairman of the Board of Architectural Education I frequently hear criticism of the Architectural Schools. May I for once put before your readers the other side of the picture by sending you an extract from a letter just received from a young man who wishes to come into a London architect's office with a view to experience and to an opportunity of study in the evenings in a good school of architecture. The letter is as follows :—

"I have just finished 4½ years' pupilage with Mr. ————, my present employer, my age now being 20 years, 7 months. I can survey, level and design under previous rough sketches. I have charge of three junior pupils and do all the work of the office drawings."

In other words, this pupil is the head man in this architect's office. Is it to be wondered at that some of us are trying very hard to introduce a more enlightened state of affairs into the education of the young architect ?

If any of your readers have a place in their office for the writer of this letter, to enable him to do what he wants and get to a town where there is a school in which he can study in the evenings, I shall be happy to put them in touch with him. I have no vacancy myself at the moment or would take him gladly.

Maurice E. Webb.

"A Suggested Change in Building Law."

Sir,—Your leading article on a suggested change in building law is timely, because both the L.C.C. and the City of London authorities are now drafting new sanitary by-laws covering, amongst many other things, the vexed question of the position of the w.c. in any class of building. Modern experience shows that some discrimination is necessary. Modern apartment houses and modern hotels in London can rarely be planned economically and effectively so long as the existing by-laws are in force. I have recently slept in large, sumptuous, new hotels in the cities of South America in which the bathrooms containing the w.c. and bidet are remote from outer walls and are ventilated *into the corridors of the hotel*. There is one bathroom and w.c. to each bedroom, and *nuisances do not arise*. I do not defend this practice, but it is instructive to note the fact. Some variation in the London by-laws is clearly desirable. It is not reasonable to make one set of conditions apply to the only w.c. in a small property, used by a large family, and also to a private w.c. attached to a bedroom of an hotel. The regulations of water authorities should similarly be variable. Some years ago, when I asked the Chief Engineer of the Metropolitan Water Board for permission to depart from the regulations in equipping a luxurious bathroom at Hampstead, he said, "I don't suppose they will be doing the week's washing in this bathroom." The necessary permission was given. But, as you say, such variations should not be discretionary; they should be unequivocal. It is desirable that the building trade and the R.I.B.A. should deal with the question forthwith before the proposed new by-laws are made effective.

T. A. M'Intyre,
Director of Shanks & Co., Ltd.

The Architect and the Builder.

Sir,—We have read your recent leaders on "The Architect and the Builder" with interest, but also with the feeling that the point of view expressed is that of the architect. In this age of widespread educational facilities, builders possessing sound knowledge and good taste are quite common, and their productions bear comparison with those of the average architect, the "spiky finial and crinkly barge" being conspicuous by their absence.

We find that the architect of to-day does not give the same time and thought to his planning as the older school did, hence the countless problems cropping up for adjustment during the building. Also numerous items are now referred to specialist firms; hence a £7,000 job with £5,000 p.c. items, all the competitive tendering being confined to £2,000 of more or less speculative items from a builder's point of view.

We recently tendered for a housing scheme, and the following items had been previously allocated: Concrete, gravel, sand, bricks, breeze and concrete blocks, damp-proof course, roofing, grates, doors, bath, door and window fittings, rain-water goods, inspections cover, &c. Can the architect buy better than the builder ?

Going back to the "spoiling the landscape" question, we have several plans of houses wherein we have honestly tried to make the best use of site and funds available, and we should be pleased for you to publish one or two of these, and would give a prize of £2 2s. for the best constructive criticism of each, yourself acting as judge. Just Ordinary Builders.

[*** The attempt was made in our articles to be quite impartial, and we do not question the statement that there are, fortunately, many builders who possess sound knowledge and good taste; but we also believe, what most builders of our acquaintance appear to admit, that the services of a competent architect in the erection of almost any building are desirable if sound planning and design are considered. We believe our correspondents are mistaken in thinking that the architect of to-day does not give the time and thought to his planning that the older school did. We shall be pleased to publish one or two of our correspondents' designs.—Ed.]

American Methods in Building.

Sir,—Prof. Reilly, of Liverpool University, lecturing at the Society of Arts, is reported as attributing the speed attained in the construction of Devonshire House to the adoption of the American method, namely, of preparing a time schedule or chart before the work started. As these time schedules are so essentially a product of common sense, I imagine they have arisen spontaneously in many undertakings in England.

Personally, I have no recollection of having drawn any inspiration from the States, but I drew up time schedules for big buildings in 1915, 1916, and 1917, and the work was carried out in accordance therewith. The construction of these time schedules was explained and use advocated in a series of articles I for *The Builder* in 1923, but it is now years since I first practised their use i country. E. F. Sarge

Party Walls.

Sir,—I have read the very interesting of articles on the above subject which appeared for some weeks in *The Builde* the writer has not dealt with the case London area, where a building owner out work without notice and where the adj owner is not aware of what has been don the work has been completed. Applying injunction will not help, and lawyers a at all certain whether the Act provides a r if the building owner refuses to recogni wall as a party wall. Perhaps the writer series of articles would kindly deal wit point, and also where work has been com and an agreement has been come to, shou agreement be embodied in a formal a I should also like to know whether in such as I have mentioned, solicitors' charg in your contributor's view, a legitimate i

"Survey

Architects' Registration Bill.

Sir,—Your correspondent "Justitia" the definite statement that under the pro Registration Bill, members of the Institu styled "Chartered Architects," while architects who are not members of the Ins are to be styled "Registered."

I would point out that there is no ref in any part of the Bill to the title "Cha Architect" or "Registered Architect." Bill provides that persons registered und Act are to be entitled to use the descr "Architect." Your correspondent is appa confusing the Bill with the R.I.B.A. S mental Charter of 1925, paragraph 7 of gives corporate members the right to u title "Chartered Architect."

The object of the Bill, as has frequentl pointed out, is to register all *bona fide* arch whether practitioners or assistants, and w or not they are members of any organise of architects.

C. McArthur Butler,
Secretary of the R.I.
Registration Commit

OLD HAMPTON COURT PALACE

ORE the Royal Institution last week, Mr. Law, C.B., gave a very interesting on "Old Hampton Court Palace ed."

ng briefly described the familiar works ration, &c., carried out at the Palace up). the speaker said that with the advent 2 of the present Secretary of the Office ks, Sir Lionel Earle, a new era opened mpton Court, and since then, in that riod of fifteen years, owing to his energy, nd enthusiasm, more had been done to the historic and artistic interest of on Court than in the whole previous -four years since the Palace was opened en Victoria free to all her subjects. He ot omit to notice the active co-operation Peers, the Inspector of Ancient Monu- of Sir Frank Baines, the Director of and of other officers in the same Depart- The first result was this official announce- n March 25, 1918: "The King, on the of th· First Commissioner of Works, has ed to the opening to the public of the d Gallery at Hampton Court," together portion of Henry VIII's Holiday Closet, ueen Anne's Pew, with facilities for g what had hitherto not been open to pection of the general public, the Chapel one of the most interesting of all the of the Tudor Palace. In the process of g up the Gallery, and clearing away excrescences, some curious old inscrip- for centuries hidden, were uncovered vealed. For instance, on the stone and plastered jambs of an old wall of 's building, bricked up by Henry VIII 5, there were discovered certain scratch- id incisions, with the names of several ry VIII's workmen, made by them just t was bricked up. One was very plainly one," that was Galyon Hone, the King's who was at this very time glazing the s in this Gallery and the adjacent ng Chamber and Hall. Another scratch- apparently the half-obliterated signature chard Rydge of London, Carver," who the time carving the beautiful pendants oofs of the two chambers just mentioned. orthy, excellent workmen-artists they who did good, sound, honest work in me. Unfortunately, only portions re- of the Holiday Closet, most of it been cut up and destroyed by Wren in gn of William III. Several of its old ed windows, however, still existed, the glass, of course, long since knocked Puritan or classicising ruffians. A large of the wonderful ceiling, however, d, mellowed indeed by age, but other- t as it looked on that All Saints' morning lenry and Catherine took the Sacrament r beneath its glittering ribs and pendants. next important revelation of Old on Court took place on August Bank , 1923, when what remained of Cardinal 's Private Rooms was opened to the The oak panelling in three rooms vealed, two being varieties of the linen- ttern. Two ancient stone doorways, and moulded, with their original huge oks for hanging the massive oak doors of riod, were found and opened out, and o fine stone Tudor fireplaces behind the ones. Another valuable discovery was overing of portions of Wolsey's beautiful ital ceilings behind the classic cornices ound these rooms by Sir Christopher o hide the gaps made by his ruthless of the friezes that must originally have important features of the decoration. portions, hidden for 200 years, retained iginal colours, as rich and resplendent they shone down on their owner. All ly-revealed features in these rooms ontemporary with Cardinal Wolsey. re the same doorways he passed through, dows he looked out of, the fireplaces he Not often was there to be seen a suite os with associations such as these, so and yet so intact in their main features, so redolent of old, forgotten, far-off times, and, happily, so little defaced. Not often had so much antique work been brought suddenly to light in one of the King's Palaces—after an entombment of 200 years—in rooms hallowed by memories of one of the greatest figures in English history.

What was conceived to be Wolsey's Ante-Chamber was panelled from floor to ceiling with a rare pattern of linen-fold. Whether this panelling formed the original decoration of this room, or whether its walls were covered in Wolsey's time with tapestry or cloth of gold, was uncertain. But that it was made for the room and put up at latest a very few years after the Cardinal's death was certain. In this connection it was curious to observe that the top of the Tudor arch into this panelled room was only about 4 ft. above the steps leading into it; so that, within the last five years, some half-million people had had, in passing under it, to enter Cardinal Wolsey's Rooms with bowed heads. From this ante-room they passed through another doorway into a finer, more important, and more interesting one in every way. It seemed likely that we had here Wolsey's "Privy Chamber." The plain Tudor oak panelling was probably put up subsequently to the Cardinal's time, for his rooms were all hung with the choicest tapestries, his own more private ones being ablaze with splendid hangings of cloth of gold and silver. One of the most interesting features of this room was the original fireplace—exactly as it was when Wolsey sat by it 400 years ago—with its back of bricks laid herring-bone-wise, still black with the wood burnt in the grate more than 200 years ago. Entirely intact was the beautiful ceiling, one of the most attractive, and perhaps the purest in design of any in England of this period and style, with none of those extravagant ribs and protuberant pendants and bosses that marked the inferior taste of the latter end of Henry VIII's reign, and still more the latter half of the sixteenth century. It was constructed of wooden ribs, with gesso ornamentation applied, and with their intersections marked by small bosses of turned wood, with leaves of lead; while the plaques at the hexagonal radiating point were a sort of papier-maché—called "mouldyd work" in the Cardinal's building accounts.

From this room they passed into the largest of the three, but the one which had suffered most from eighteenth-century vandalism—horrible Georgian sash windows substituted for the picturesque old bay mullioned one and others; the Wolsey frieze and half of the beautiful ceiling dragged down. The half that remained, though intricate, was yet very pleasing. Some of the plaques exhibited the cognizances of Cardinal Wolsey—the pillars and cross-keys. This room was formerly divided into two by a common-place partition, and when this was removed the old fireplace was discovered. It has some curious ancient inscriptions, incised on the arched stones, not yet deciphered, but certainly decipherable.

The next portion of the old Tudor Palace to be revealed was Henry VIII's Great Kitchen, which was made accessible to the public on August Bank Holiday, 1925. This had been out of use as a kitchen for some 150 or 200 years. The accounts of the Clerk of the Works for the three years 1530–1533 made it clear that the whole building, nearly 100 ft. by 40 ft. broad, was treated and referred to as one. We were confirmed in this view when we come carefully to examine its whole plan and arrangement, for we found that the main walls of the two divisions of the Kitchen were in line, without break or straight joint, and, above all, that the roof was and is in one continuous structure. Moreover, the fact of there being no sign anywhere of anything like an enlargement or extension of early work would seem to dispose of the idea formerly entertained—that we had here Wolsey's Kitchen. This was more likely to be identified with a smaller one than this, though with similar features, some 90 ft. to the east, in a position much nearer the site of Wolsey's Hall, which was pulled down by Henry VIII. In any case, even if this surmise were not correct, the whole big kitchen, as we saw it now, was unquestionably that which was known in Henry VIII's time as his new kitchen or Great Kitchen. These vast kitchens and cellars, with their various appurtenant offices, were built by King Henry, mainly in 1531 and 1532, not only for the essential needs of the royal households, but especially with a view of keeping up the good old English custom of the whole of the inhabitants in a great establishment, and of all who, whatever their business might chance to be, were staying in a great house, dining together in hall.

It was not until four years ago that the idea was definitely broached, in connection with the problem of the vast cellarage under the Great Hall. At that time the Wine Cellar was cut up into eight or nine separate spaces, three of them in private occupation, all the rest being devoted to the storage of coke for the heating apparatus in the State Rooms. The work of clearing away the encumbering partition walls had been going on all this winter—a very slow process, as every bit of the stuff, bricks and brick rubbish, had had to be carried out in baskets and up steps into the open. It was estimated that no less than 150 tons had been got out, including thousands of bricks, which had been trimmed for use elsewhere—and excellent ones they were, of considerable value.

Another point was that there was a reference in the old accounts to making the wooden stands or stillages for the casks to rest on; and it was extremely interesting to note that the remains of these had been found in many parts of the cellar on the top of the brick benching, some of them still showing the bevelling to take the circular shape of the barrels. That they should have been preserved these 400 years was very remarkable. Of course, the Office of Works were taking the greatest care of them, on the exact spots where they were found: and so they would aid us considerably to imagine the arrangements made for stacking the casks and the general appearance when, as we may suppose, King Henry went to view, as he doubtless did, his fine "Newe Wyne Seller," on his first visit to Hampton Court after his marriage to Anne Boleyn.

Adjoining to the "Kynges Newe Wyne Seller" was a room built, or, at any rate, altered so far as its windows were concerned, by the same King, at the same time, and called the "Drynkynge Howse." It was, in fact, the Palace canteen or "bar," to which those who had allowances of wine or ale resorted, to get their pitchers or black-jacks filled, including workmen too, who, in the good old Tudor days, had generous allowances of free beer and "drinking times" to consume it in. Although not a large room, being only 27 ft. long by 12 ft. wide, it was at present cut up by wooden partitions into three separate enclosures; but its original fireplace remained, though at present obscured by a common, modern grate. Some portions of the old panelling which covered its walls also remained. In my Lord Cardinal's time there was a "parlour nexte Seller barre"—the bar-parlour, in fact—which was then hung with tapestry, and which might be identical in its main features with King Henry's "Drynkynge House." In due course, the speaker had no doubt, arrangements would be made for clearing away the obstructing partitions, opening up the original fireplace, and re-covering the walls with its old panelling; and then making this very interesting relic of Tudor domestic life accessible to all who wished to view it.

"What to See" Road Signs.

The touring department of the Royal Automobile Club announce that they have now definitely accepted the plan for the production and issue of "What to See" road signs. They have arranged to furnish local authorities with signs, in stoved enamel. Each sign will measure approximately 40 in. by 32 in., and will be ready for fixing to wall spaces at the entrance to the town or village, or to sign-posts.

AMERICAN APARTMENT HOUSES—VI.

By F. E. BENNETT, A.R.I.B.A.

FIG. 25.—TYPICAL PLAN—31 SERVICE FLATS. VARIOUS, 4, 3, AND 2 ROOMS. City Block, 200 ft. by 190 ft. 17 Stories. 12, East 86th Street.

ALTHOUGH this is the plan of an "Apartment Hotel" and not a block of flats, it is given as an example of the complete opposite of plan No. 11 (January 21). It indicates planning features when a great number of small flats are designed on a large site. The court space is large, there is practically no dark area, and the public corridors have enormous length. The common unit of the living-room with a kitchenette and bedroom with bathroom and large closet—to take two travelling trunks—is a very good one and a peculiar development of America, but the accommodation provided is rather intimate as between flats and may be severely criticised for this reason. Nevertheless, the hotel is said to be a great success financially. The kitchens together with dining alcoves seen on this plan are enlarged in an illustration to be published later.

Probably the great weakness of this plan is the courts, which are only 24 ft. wide and provide very inadequate lighting at their inner ends, especially on the lower floors. It means that a flat on the second floor at an inner corner is some 120 ft. away from the light horizontally and equally far away vertically. Vertical circulation is provided by four lifts at one point in the centre of the plan.

Typical Plans with Inside Courts.

FIG. 26.—2 FLATS—14 AND 12 ROOMS. Corner Site, 117 ft. by 127 ft. 907, 5th Avenue, N.Y.

The arrangement of passenger lifts, public halls and galleries is unique, and again there is a new feature in reception rooms and conservatories.

FIG. 23.—4 FLATS. Corner site, 100 ft. by 125 ft. 570, Park-avenue, N.Y.

This shows all the servants' rooms grouped around the inside court.

FIGS. 27 AND 24.

Two examples of a type very common in New York on "inside" sites.

FIG. 28.—TYPICAL PLAN—5 FLATS.—C site, 150 ft. by 125 ft. "The Ba Apartment House, Chicago.

The laws of Chicago governing flats are on those of New York, but they have c differences. This plan shows the ch There are two stairways from each flat as h but the internal ones are provided with wells glazed over at the top. The lifts three groups of two—passenger and ser one group supplying one flat and the two to each. In the corner flat the smaller than the New York one, but the portions, namely, living, bedroom and s are still carefully segregated. The maids' are a little larger, an 80 ft. minimum required as against 70 ft. in New Yor

It is unusual in Chicago to have one t plan for the whole building, but variety and disposition of flats is introduced if p within the same building. This is due big flats being newer in Chicago and generally accepted as in New York. It wo considered venturesome on the part of a fi to back his enterprise on one type of p a city where the requirements of the ten still uncertain.

Morley College for Working Men and Women.

This College, a centre for the higher education for working men and women by evening classes and lectures, was formerly housed in a portion of the "Old Vic.," in Waterloo-road, occupying rooms entirely surrounding the stage and both above and below it, and seriously interfering with the safety and efficiency of the stage performances. When it became essential for improvements to the theatre to be undertaken to comply with the requirements of the London County Council, the result of the negotiations was that the College became possessed of the old school premises belonging to the Yorkshire Society in Westminster Bridge-road. The adaptation of these premises involved considerable alterations and extensions to render them fit for the purposes of the College. Luckily there was sufficient open land at the rear of the buildings. The work involved the raising of the centre block of the old work to give better classrooms and a laboratory, the provision of a common room, the centre of the social life of the foundation, a large assembly hall, gymnasium, refreshment room with the necessary staircases, service and sanitary arrangements.

The assembly hall is planned with an entrance for the public as well as communication with the College buildings, and so can be used as an independent entity without interference with the College work. It is provided with a cinema installation for two machines. For its size the hall contains an exceptionally large stage for the use of the large orchestral and choral classes of the College. During the course of the work it was decided to have a resident caretaker on the premises, and provision for him was made by raising the retiring-room block to accommodate a two-storied flat.

The aim of the College Council was to meet the necessary requirements at as moderate an expense as possible, so that nothing was available for any elaborate architecture, and the whole work, the total cost of which was £28,863, is treated in a very simple manner.

The general contractors were Messrs. Dove Bros., of Cloudesley-place, Islington; and the following were sub-contractors:—F. Edwards & Son, central heating and domestic hot-water service; Locke & Soares, electric lighting and power for cinema installation; The Crittall Mfg. Co., Ltd., steel casements; J. F. Ebner, patent flooring; J. M. Pirie & Co., door furniture.

The architects were Messrs. Lanchester, Lucas & Lodge, of 19, Bedford-square, W.C.1.

Skating Rink for the London Ice Club.

This building has been erected near the river adjoining Grosvenor-road for the London Ice Club, for the purpose of ice-skating and general use as club premises. It is approximately 210 ft. long by 130 ft. wide, and consists of the skating rink proper surrounded by club rooms, American bar, tea lounge and restaurant, access to all of which is obtained from promenades and balconies surrounding the actual ice surface. The contractors had to overcome numerous obstacles not usually met with on building sites, as the whole of the foundation work was under water level. This work generally consisted of piles and reinforced concrete, the latter also being used in the construction of a large basement with its retaining walls housing the engine and boiler rooms, coal and wine stores, etc., a drainage sump, ventilating shafts and ducts, stairs, certain floors, external balconies, the ducts carrying the brine mains and the rink basin proper.

Fifty-two reinforced concrete piles 12 in. square were driven, the maximum load per pile being 30 tons. They were placed in groups of two, three or four, and reinforced concrete caps were cast over the heads to receive the stanchion bases. The piles varied in length from 22 to 25 ft., and penetrated the ballast about 5 ft. "Ferrocrete" was used for the whole of the piles and the basement, and a large proportion of the rest of the structure. The basement retaining walls are of the cantilever type, of an average height of 12 ft. Owing to the slope of the gravel strata, portions of the basement were actually resting on the gravel. In one wing, however, the ground consisted of peat, and here the loads of the retaining walls were carried on beams spanning between mass concrete piers, carried down to ballast, at times 26 ft. below. No asphalt damp-proof course was used in the basement, but a small proportion of "Novoid" was mixed with the cement. Careful construction has resulted in a perfectly water-tight basement, although continuous pumping was necessary during construction.

The superstructure is a steel-frame building, the steel being surrounded with concrete and the panels filled with red brick. The backing of concrete, made with "Ferrocrete," was cast simultaneously with a facing of concrete made with white cement and a Derbyshire spar aggregate, and this facing varies from 1½ in. to 3 in. in thickness. The method used gives a homogeneous concrete, and when the shuttering is struck the white grout or cement on the face of the columns, beams, etc., is brushed off with an electric brush, thus exposing the spar aggregate as a permanent finish.

The actual ice surface is 170 ft. long by 90 ft. wide, with a circle 100 ft. diameter in the centre. Three ammonia compressors in the basement are used to lower the temperature of the brine mixture, which is circulated by pumps through main overflow and return pipes running along one long side of the rink. To these, at every 2 or 3 ft., are connected the coils of piping which actually freeze the water on the rink. The floor of the rink consists of reinforced concrete 6 in. thick laid on hardcore, then 4 in. of compressed cork, on which is laid 1¼ in. of asphalt, on top of which the pipes are set. When the pipes had been tested and levelled, expanded metal was laid over them and concrete filled in and around them, and ¾ in. of concrete—stained with black manganese oxide—floated to a perfectly level surface completed the floor ready for flooding with water to a depth of approximately ½ in.

The skating area is surrounded by a removable barrier of oak panelling, all in sections, and entrances on to the rink are indicated by columns and over-doors which show over the heads of the skaters. The ground floor is laid in teak, with the vestibule and staircases in terrazzo work. On the ground floor is the large entrance hall in which is situated porter's box, small reception room, telephone exchange and public call office. From this, through swing doors, the rink proper is entered. The cloakrooms for the use of guests are situated next to the entrance hall, and skate-rooms, in which members have lockers for clothing and skate-boots, are situated on each side of the tea lounge on the ground floor. From each skate-room an inner staircase gives access to lavatories on the first floor without the necessity of entering the rink promenade. A ladies' dressing is provided in conjunction with the lava Bathrooms are provided for both men women members, with a shower ba addition in the men's lavatory.

On the first floor is a large restaurant fifty tables, capable of dining 200 me There is an American bar, and following and *en suite*, are writing room, smoke Board and Committee Room, and dining-room. On the balcony outside suite of rooms, and overlooking the rink private box for distinguished visitors. club rooms are treated with a restful ment-coloured scheme, with brown cu and carpet and hide-covered furniture. rooms are lighted by candle fittings.

On the second floor is the Secretary's kitchen, etc., store rooms, staff lavatorie Lifts, four in number, communicate be the kitchen and service rooms to both t lounge and restaurant. The restaurant large plate-glass enclosure overlookin rink. A false ceiling of fibrous plaster f the line of the steel trusses and is finish the top with a long barrel vault of pl whilst the flat ceilings below this are pa with framing filled in with cathedral Glazing in the outer roof illuminates th through false ceiling lights and provi brilliant light on the ice. At night con lighting is reflected from the barrel which, being coloured yellow, grading orange, gives an effect of bright sun whilst numerous powerful lamps abov glass ceiling lights give the brilliance sary if the effect of outside ice is to be obt whilst casting no hard shadows on th Round the walls of the rink are arr specially designed electric light fittings give a general glow of warm yellowish-c lighting over the whole of the promen Throughout the whole of the rooms this lighting effect is maintained.

The maintenance of a comfortable tem ture in all parts of the rink—whilst yet k the ice at its cold temperature below fr point—has been a matter of some dif owing to the problem of condensation br about by the two widely different tempera Members sitting around the edge of th watching the skating are protected fro cold draught rising from the ice by ca arranged steam pipes, which induce a screen of air completely shutting off the By means of many ingenious devices— temperature of 6 degrees below freezing on the ice—it is possible to maintain th of the building at a minimum of 60 degr without causing any condensation. Vent is by the Plenum system with a fan ro the basement, extracts being placed in th

In the summer months it will be poss thaw and run off the ice, and on the co floor thus exposed lay a sectional spring floor capable of being used by 1,000 c The general decorative scheme in the designed to give an effect in sympath the accepted surroundings of outdo skating, greens and blues predominatin warm colours in tea lounge and rest The acoustic properties of the building carefully considered and have proved quite satisfactory.

Prior's Court, Chieveley, Berks.

dditions and alterations to this country
near Newbury, have been designed by
Forsyth & Maule, FF.R.I.B.A. The
fice quarters contained in a one-story building were pulled down, and the new wing built on this site between the main part of the house and the stable and bothy building. Connected to the north side is a new one-story wing, containing the kitchen, servants' hall and offices. The main feature in the new wing is a large L-shaped music and billiard room, panelled in oak by Messrs. J. P. White & Sons, Ltd., of Bedford. On the first floor there are new bedrooms, bathrooms, &c., and in the roof, servants' bedrooms. Two bay windows have been added to the dining and drawing rooms at the east end of the old house. The elevations, in red brick, are treated in a manner similar to the old, the moulded brick cornice and stone coping being continued. The gables are brick with a stone coping to the pediment. The general contractors were Messrs. Foster & Dicksee, of Rugby; other contractors being: J. Jeffreys & Co., Ltd., central heating; Tyler & Freeman, electric light plant and wiring. The consulting engineers for the drainage work were Messrs. Rogers, Field & Bean.

Mission Church of St. William, Ecclesall, Sheffield.

In connection with this work, illustrated in our last issue, we are informed that Messrs. Drytone Ltd., were not only responsible for the panelling, but did a good deal more of the woodwork, including the reredos, organ front and screen, skirting, and mouldings. The firm not only finished the work with the Drytone patent process, but manufactured the joinery in their own workshops.

Professor Prior on Registration.

SIR,—The challenge to the Registration Bill voiced by Professor Prior in his letter to the *Times* raises issues of very real importance; issues to which there has never been shown much attention by the promoters of the Bill. Is there not grave danger in making architecture into a close profession, in setting up a court as to what shall constitute architects' title and practice? Is the Institute in thus "tying architecture to its tail," doing its best for it—a best which is contained in no schedule of practice, but depending on the nobility and endowment of the architect himself? Is the Institute the infallible judge of what this includes? Surely its usefulness as an Institute can be very well recognised without any such fanciful prerogatives. Some of the best buildings have, I understand, been erected by those outside of its membership. The public must also suffer under a claim which thus delivers them bound into the Institute's hands.

Allowing full recognition for the difficulties out of which this proposed legislation has arisen, it is none the less regrettable that at a time when the architect's services are becoming more appreciated, the Institute should have chosen that moment to set up an impediment to the very objects we all have in view. But apart from all this is it not falling back on reaction for the Institute thus to set itself up as an infallible court whose experience is final? The best things done are the outcome of new experiences, shaped on its own needs, the power of its own initiative, not those emerging through conformity to an arbitrary tribunal. If the Institute could consider the nature of architecture it would see that architecture is too big to be kept in its pocket, and that to have the courage to believe in architecture a little more is a more powerful impulse than that sort of protection which would wish to keep it spoonfed. There are better means than those of extending bureaucracy for promoting the freedom and expansion of architecture—and these are to believe in it a little more.

ISIS.

[***Whatever may be the real value of Prof. Prior's contribution to the discussion on registration, we fear our correspondent has rather missed the point in his letter to us, however much we may sympathise with his motives. What does he mean by "the Institute?" The Royal Institute of British Architects has by an overwhelming majority agreed to the principles of Registration by Act of Parliament, and if majority rule means anything the Institute had no alternative but to introduce a Bill in fulfilment of this expression of opinion.—ED.]

Registration of Architects.

Prof. Edward S. Prior has addressed the following letter to the Editor of *The Times*:—

SIR,—I am told that the Bill for the Registration of Architects, as promoted by the Royal Institute of British Architects, is shortly to come before Parliament. As an architect I may be allowed to say that the Institute has been of service to the public in safeguarding the respectability of the profession. But the best servant may prove a tyrant, when he is allowed to take his master's place and to order the household. The proposal of the Institute is, in short, to set itself up as a Court of judgment as to what shall constitute architect's title and practice. It would, in the first place, automatically endow the 8,000 odd who pay fees to the architects' "unions."

Up to some ten years ago the Presidents of the Royal Institute have discountenanced attacks on the liberty of art to build; and indeed not a few of our leading architects have practised outside the limits that the Institute is now seeking power to define. The public should consider whether they wish to be tied to the Institute's tail. I have in my hands an autograph letter from a late P.R.I.B.A. It informs me that, when a client has once appointed an architect, he himself has no occasion to interfere with his architect's execution. The appointment "makes the work his"—the architect's—and so no protest, delay, or alteration can be discussed. The architect—like the Crown—can do no wrong. Will the public consent to put into legal registration such an autocrat's privilege?

EDWARD S. PRIOR.

CONSTRUCTIONAL STEELWORK SIMPLY EXPLAINED.—XIX

BY OSCAR FABER, O.B.E., D.Sc., M.Inst.C.E., etc.

[EDITORIAL NOTE.—*This series, which will be published in book form later, is intended to present the problem in so simple a form as to be readily understood by those having no special engineering training.*]

WE will now take an example of grillage design. Let us consider the case of a stanchion carrying 600 tons, which load it is desired to distribute on a soil capable of carrying four tons to the square foot.

Clearly the area of foundation required is

$$A = \frac{W}{p} = \frac{600 \text{ tons}}{4^T/\text{sq. ft.}} = 150 \text{ sq. ft.}$$

So that a base just over 12ft. square is indicated. We will design the grill on the basis of using gusset plates as in Fig. 54. Assuming the stanchion to be 20in. square, the forces acting on the upper row of grills would be as shown in the figure.

The worst bending moment occurs on the centre line AA. Its magnitude can be calculated by considering the forces acting on one side (either side) of this line. These forces are: a downward load of 300 tons (half the total load) acting about 10in. from the centre line (since the load is transmitted from stanchion to the grills through the gusset plates); and an upward load of equal amount, uniformly distributed over the underside of the half base, and therefore having its resultant at the mid-point of the half base, *i.e.*, at a distance of $\frac{12\text{ft.}}{4} = 3\text{ft.}$ from the centre line.

The moment about the centre line is, therefore,

300 tons × 10in. = 3,000 inch tons clockwise,

and

300 tons × 36in. = 10,800 inch tons anti-clockwise,

making a resultant moment of

10,800 − 3,000 × 7,800 inch tons.

Adopting a safe stress of $7\frac{1}{2}$ tons/sq. inch, the section modulus required is clearly

$$z = \frac{7{,}800}{7\frac{1}{2}} = 1{,}040 \text{ inch units.}$$

Adopting the new British Standard Sections, this can suitably be provided by five 24 × $7\frac{1}{2}$ × 90lbs. joists, having a section modulus of 203.6 inch units each, or a total modulus of 1,018 inch units. Allowing a space of $1\frac{1}{2}$in. between joists for the insertion of concrete (this is the minimum practicable) the overall width would be $43\frac{1}{2}$in., which determines the width of gusset plate required.

Coming now to the lower grillage, the forces acting are as in Fig. 54 (*b*). As before, the greatest moment will be on the centre line AA. As before, we need only consider the forces on one side of this centre line. The downward forces on the lower grill are 120 tons $\left(\frac{600^T}{5}\right)$ from each of the five upper grills, and an upward force of 300 tons (half the total load) uniformly distributed on the half base, and therefore represented by the resultant, central on the half base, and therefore at a distance of $\frac{12\text{ft.}}{4} = 3\text{ft.}$ from the centre line.

The movements about the centre line are, therefore:

Clockwise.—120^T × 9in. + 120^T × 18in. = 1,080 + 2,160 inch tons = 3,240 inch tons.

Anti-clockwise.—300^T × 36in. = 10,800 inch tons.

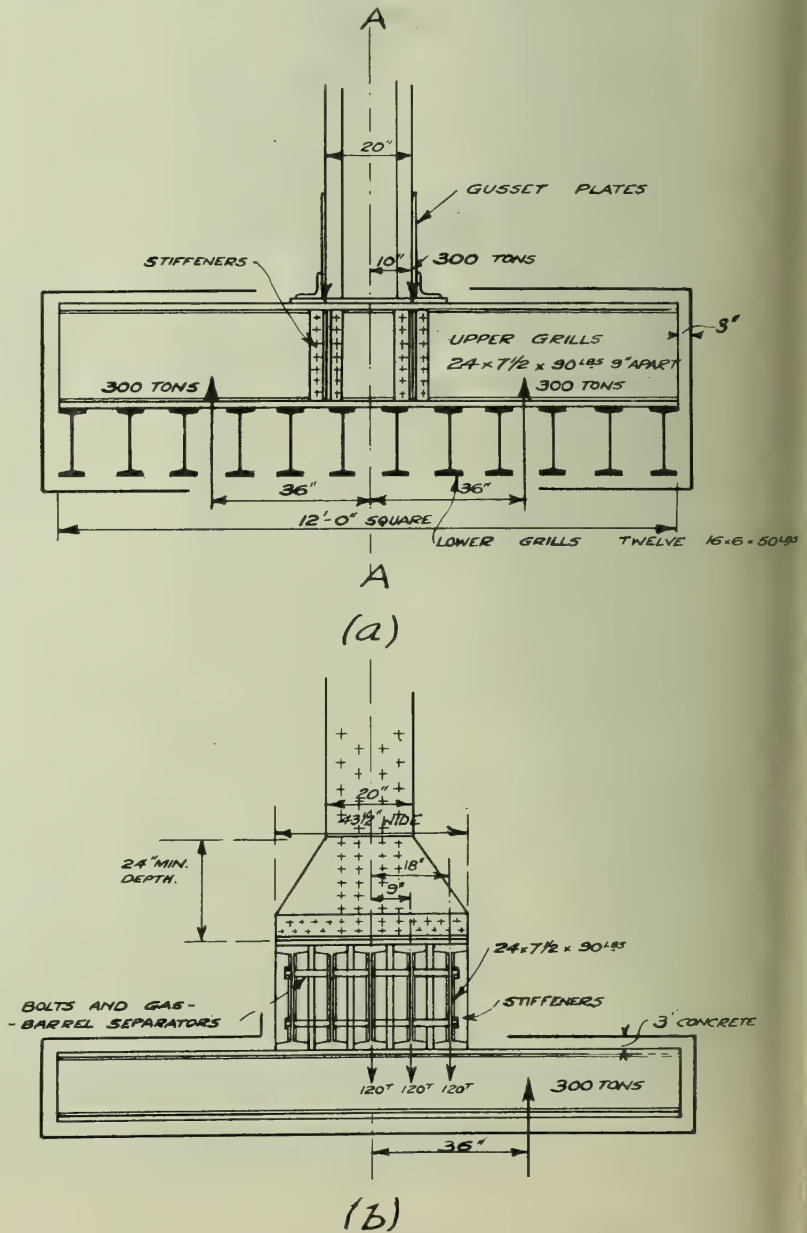
Resultant.—10,800 − 3,240 = 7,560 inch tons.

Adopting a safe stress of $7\frac{1}{2}$ tons per square inch, the section modulus required is

$$z = \frac{7{,}560}{7\frac{1}{2}} = 1{,}000 \text{ inch units.}$$

This can be provided conveniently by twelve 16 in. × 6 in. × 50 lb. joists, each having a modulus of 77.26, and therefore an aggregate modulus of 925. The concrete filling increases the strength and stiffness, even if somewhat indeterminately, which explains why an apparent deficiency of modulus may be permitted.

Coming now to the design of the gusset plates, if we followed strictly the L.C.C. regulation (General Powers Act, 190 clause 12*c*), which requires the gusset pieces to have sufficient rivets to transmit the *whole load* to the base plates, the gussets would need to be very large.



Even with four rows of rivets on each side (see Fig. 54 *b*), and adopting 1-in. rivets 3 in. apart vertically (the absolute minimum spacing for this size), we should only develop

$$8 \times 4.2 = 33.6 \text{ tons}$$

for each horizontal row of 8 rivets, and should therefore require

$$\frac{600}{33.6} = 18 \text{ rows.}$$

These, at 3 in. apart, require a vertical length of 18 × 3 = 54 in. for the gusset. But actually it will be seen that the three centre joists of the upper grill come inside the limits of the stanchion, and would receive their load by direct bearing from the

Arrangement of and Forces on Grillages.

FIG. 54,

nchion even if the gussets were omitted. the workmanship is good, so that the l of the stanchion and the bottom of the set plates are all in one plane and make tact with the base plate without any s, it is unnecessary in such case for the sets to be designed to transmit more n the load from the two outer grills, ch do not receive direct load from the nchion. This reduces the number of ts, and therefore of rows, to $\frac{2}{5}$ of what previously required, say,

$$\frac{2}{5} \times 18 = 7\frac{1}{5}.$$

eight rows 3 in. apart, giving a imum depth of gusset of 24 in.

tiffeners and bolts and gas-barrel separa- to the upper row of grills are required, lescribed in the last article. Concrete ng between the grills and at least 3 in. k all round them (for their proper pro- ion) is, of course, required.

he method of erecting a grill is im- tant. If the grills are concreted up first, vill be found that the stanchion, after nbing and the fixing of inter-connecting ers above, will not touch all the upper ls (except by some lucky chance), but probably bear at one point and require ging at other points. The space may too small to ensure grout filling it up l. In that case there will be "give," probably unequal "give," when the l comes on (as the building nears com- ion), which, besides overstraining the l. may cause cracking of stone, parti- s, etc. Even if the space is sufficient llow of grouting solid, the pressure be- en the base and the top grilles is pro- y far higher than grout or concrete can d without crushing.

better method is to wedge up the whole . when plumbing the stanchion, main- ing metallic contact, and concreting sequently. An alternative is to design area of base plate to be sufficient not verstress a concrete filling between base grill. This generally involves the use eavier and larger bases.

he above design may be considered cal of good standard practice. Improve- ts (resulting in economy of material or include the following:—

) Shortening alternate joists in each . in a manner corresponding roughly to moment diagram, remembering that the ent diminishes rapidly as we recede the centre section.

) Substituting three plated joists for plain ones for the upper grill. This les the gussets (with all the depth of dation and extra rivets they involve) dispensed with, as all three joists can receive their bearing direct. But care cessary—

1. In not overstressing the webs in ear. Often built-up sections of plates d angles will be necessary to give equate shear strength.

2. In making the smaller number of ffeners adequate in area.

3. To prevent risk of lateral collapse webs in buckling.

Substituting reinforced concrete for ower grill.

Substituting reinforced concrete for grills, and adopting a bloom or other ate base which will not overstress the ete in bearing pressure.

ere is no space in this elementary ment to do more than indicate these bilities.

PARTY WALLS: PRACTICE AND DECISIONS

By J. DOUGLAS SCOTT, A.R.I.B.A.

CHAPTER VII.—DANGEROUS STRUCTURES.

The provisions respecting dangerous structures are simple, and are dealt with under Part IX of the London Building Act, 1894, except the provisions as to the service of notices, summonses, or order, which have been amended by Section 5 of the Amendment Act of 1898. The administration of the law is placed in the hands of the London County Council, and not in the hands of the district surveyors, whose services, however, are made use of in the proceedings which follow. They are not then acting as district surveyors, but as special surveyors appointed for the occasion.

The term "dangerous" is not defined under the Act; the interpretation is left to the magistrate to determine according to the merits of each individual case when applied to for an order to remove the danger. The term "structure" is defined only in this part of the Act and nowhere else.

The procedure under Part IX of the Act is as follows:—When an information reaches the London County Council (it is usually sent by the district surveyor, either on an intimation made to him or on a discovery made by him, but is also sometimes anonymous) the department concerned instructs the surveyor to inspect and report, who in a certificate to the London County Council states whether there is danger and what ought to be done by way of taking down, repairing, or securing, and if shoring is required. The London County Council then prepare a formal notice accordingly and serve it upon the owner or occupier in the manner prescribed, or if the owner cannot be found the notice is affixed to the premises, usually the door. If shoring is required under the notice not much grace will be given for its prompt erection, and failing compliance with the notice the London County Council will instruct its contractor to do this work.

If after the lapse of a reasonable time nothing has been done by way of removing the danger, the district surveyor has to report again to the London County Council; but if, as is often the case, he has been approached by the owner's surveyor, who perhaps asks for further time pending negotiations with a freeholder or an adjoining owner, he may be persuaded to recommend the L.C.C. to allow further time, provided the danger is not immediate. If, however, no action is taken by the owner or occupier the London County Council take out a summons in a police court against the owner, and the magistrate will, if satisfied with the evidence, make an order for the danger to be removed within a stated period, and the order is served upon the owner or affixed to the premises if he cannot be found.

At the hearing of the application to the magistrate for an order, the aggrieved party may attend and endeavour by evidence to resist the making of such an order. The owner's surveyor may give rebutting evidence but cannot conduct the proceedings on the owner's behalf, which must be done by a solicitor or counsel. The argument often used that the wall and floors having been shored up and secured, no danger remains, is not often accepted, as shoring is not considered to be a removal of danger, but only a temporary expedient for preventing further danger and is really an acknowledgment of danger.

If, after an order is made, nothing is done within the time stated the London County Council send their contractor to take down what has been condemned by the magistrate to the satisfaction of the district surveyor. The contractor will only take down; he will not repair or do anything in the nature of building even with a view of preservation, and the process of taking down one part may so weaken another part and render it dangerous that it may also have to be taken down, often resulting in the entire demolition of the premises.

This procedure is not favourable to the owner as he has to pay all costs and charges incurred, and the London County Council has a lien upon the property, and the site cannot be built on until these are paid. A competent architect can usually deal with the matter with greater advantage to the owner than if the authorities are allowed to step in and do the work, and for this reason it is contended that except in very urgent cases a preliminary warning notice should be given to the owner before instituting proceedings. An order will be made upon the owners on both sides of a party wall condemned as dangerous, and it is often difficult to persuade either of the owners to take the initiative to do the work.

If upon the receipt of a dangerous structure notice the owner disputes the necessity for any of the requisitions stated therein, he may, by notice in writing to the London County Council within seven days from the service of the notice, require that the matter be referred to arbitration. The owner appoints his surveyor to act in conjunction with the district surveyor, and these two surveyors appoint a third surveyor to act as arbitrator. If the surveyors meet and report within seven days, or if they disagree and the arbitrator reports within fourteen days, the matter is at an end, and the finding in the report or award is substituted for the requisitions in the notice. But if the owner, having given notice of his desire for arbitration, fails to appoint a surveyor, or if the surveyor that he has appointed fails to concur in the appointment of an arbitrator, or in any way fails to report within seven days, then the owner's requisition for arbitration drops if no arbitrator has been appointed; but if an arbitrator has been duly appointed, then upon the surveyors disagreeing or failing to report within the seven days, the whole matters in dispute go to the arbitrator to be dealt with by him. If the arbitrator is unable from any cause to report within the fourteen days, the court has power, under the Arbitration Act, 1889, to extend the time or cause any defects to be cured.

Provision is made under the Act for the removal of the inmates from a structure that has been certified to be dangerous upon the application of the London County Council to a police court. Outside the County of London the provisions in regard to dangerous structures are contained in the Public Health Act, 1875, which, however, are not so definite or comprehensive as those contained in the London Building Act.

The liability of a sub-lessee who occupied the upper floors of a building for the cost of rebuilding a party wall condemned as a dangerous structure was held to extend only to the cost of pulling down; the cost of rebuilding was the liability of the lessee who occupied the ground floor only. (Cave *v.* Robinson, 1903.) Where one owner, under a magistrate's order, pulls down a party wall condemned as a dangerous structure, both the building owner and the adjoining owner are liable under Part IX of the Act for the expenses of pulling down. (Spiers & Son *v.* Troup, 1915.)

French Architectural Fragments.

We understand that M. Henri Auriol, Deputy for the Haute-Garonne Department, has laid before the Chamber a Bill to prohibit the taking away of parts of buildings of artistic value belonging to private owners in France. The evil which the Bill is designed to remedy exists in the sale, largely for export to purchasers abroad, of pieces of fine architecture or decoration. M. Auriol proposes the official classification of buildings of artistic value and also the seizure and restoration of fragments which it may be attempted to export.

DESIGN AND INDUSTRIES ASSOCIATION

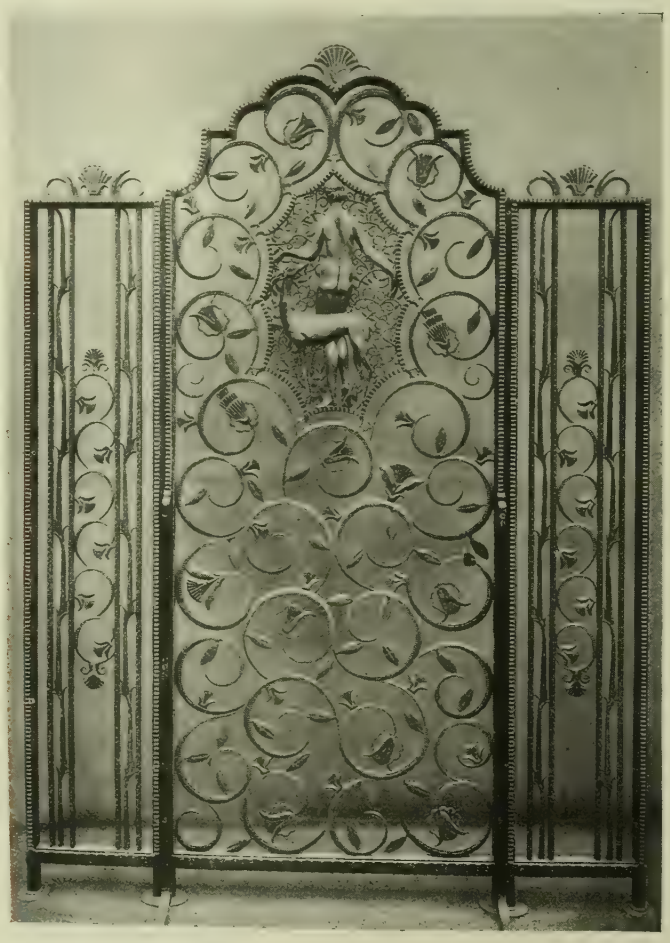
French Iron Work.

A VERY interesting paper on this subject, supplemented by some notes by Mr. A. B. Reed, was read last week at 6, Queen-square, by Mr. Stanley Hamp, F.R.I.B.A. Several well-known architects and craftsmen were present and a general discussion followed. Opening his paper, Mr. Hamp remarked that it had been said "that no material was more worthy of study than iron, for no substance on earth had more profoundly influenced the destinies of the human race. Although it was the cheapest and most ubiquitous of metals, lacking many of the intrinsic qualities of the precious metals, it nevertheless immeasurably surpassed the whole of them together in interest and in its value and utility to man. It might be that artists of the present day would seldom select iron as the best material in which to execute any purely artistic conception, yet in the past we found great artistic skill lavished upon it." One of the great difficulties of iron was the sure tendency to rust if exposed to moist atmosphere, and although many methods had been tried to overcome this, it seemed that nothing was of use excepting a coat of lacquer or preservative substance.

In designing for wrought iron it was important to realise the qualities of the material. Iron became loosened by heat, and as it softened, bars would droop and curl into scrolls under a relatively slight pressure, this property rendering it so facile a metal in the hands of the smith. When hot it could be welded, separate pieces adhering firmly together if hammered or pressed, and the rich and intricate effects they had all seen were mainly produced by this means. The welding point was the highest degree of heat the iron would bear without burning and disintegrating, and its management required skill and dexterity. He would impress on all those who were engaged in designing the importance of the true smithcraft, and that they should insist that no casting should be allowed. The whole of the work should be properly forged. It might be suggested that for the reason of reducing the cost portions might be cast, but he hoped that all would refuse to have it done. He could conceive that if that were allowed the present movement would lose its charm and deteriorate out of all recognition.

In examining the work of the past he could not help feeling that one needed to go back almost to the twelfth and thirteenth centuries to find any work which might be said to have influenced the present movement. If one looked at the old door hinges from Gannat in Auvergne and St. Alban's Abbey in this country, which were to be seen in the Victoria and Albert Museum, one would find there, he thought, a feeling which might have inspired the present designers. These particular hinges consisted of convoluted scrolls springing from a main stem with zigzag and curved lines over the surface. It was there apparent tha stamping was already a recognised process of the industry which our ancestors were not at all ashamed to use. The St. Swithin's grille in Winchester Cathedral might also be considered a work that might have influenced the metal work of to-day.

In Spain there was a grille in the north aisle of the Romanesque Church of San Vinciente, at Avila, near Madrid, which had the same character. A more simple and probably later type was to be seen in the choir grilles at Lincoln, also a grille in Chichester Cathedral. These were works of the thirteenth century, and the close of that century had been considered t mark roughly the end of a period in this countr of genuine blacksmithing. On the other han however, in the later work, such as the cho gate at Canterbury, there was an interesti form of rich hexagonal diaper design, consisti mainly of long notched straps of iron about ½ i thick, placed vertically with other simil straps crossing them diagonally, and bolted a riveted. It had been said with regard to t last example that the smith had no han whatever in the production of such a desig as that, and even in its execution his part wa quite subordinate, for it was little more tha joinery executed in iron. By such introductio the smith's interest in an art in which his shar was but mechanical, naturally declined an slowly fell off altogether. Smithing as a fine a then became almost extinct in England for couple of centuries. Since that time the Frenc had taken the lead in ironworking, whethe in point of delicacy of execution or refinemen and invention in design, and to-day they le in the right treatment for the present day needs



From what had been said, it might be gathere that he attributed the present tendency of th French designers to be towards an attemp to get back again to the truly blacksmith art. With all the facilities now obtainable, the had realised that the accidental effects produce by the old men were no longer justifiable Although they appreciated, as we all did, th artistic value which had thus been obtained they frankly set out to develop on fresh line and produce somewhat similar results, th difference being that, whereas in the former cas it was accidental, in their work it became a ordered method. This might be thought un justifiable, but he held the contrary opinio and claimed that if the effect produced wa obtained by true craftsmanship, that it might b accepted and encouraged. Although the moder movement had been encouraged in Germany Denmark and Sweden, it had not until recentl received any encouragement in this country We seemed to be so much afraid of attemptin new forms here that only traditional *motif* were accepted. In fairness to the few who ha knowledge of this work. the lecturer admitte that up to quite recently they had had n opportunity of showing what they could do.

It was important in criticising the designs t remember that the artist had been faced wit the problem of producing a character in h design, which should be in harmony with th architectural setting. It might be argued wh one should attribute this movement mor particularly to the French designer, and in s doing one might be thought to be a little unju to other continental countries. The lecture however, felt that the degrees to which th movement has advanced were more largely du to the artistic genius of the French natio than any other. Fortunately for the Frenc designers, they worked for a nation that ha the courage and artistic perception to giv them their opportunities. It was perha regrettable that we in this country had n the same opportunities, and he believed th was largely the reason why the metal work here had not produced equally interestin examples. He was certain it was not becau we lacked the skilled worker.

It might be interesting for a moment consider what were the pecularities of th modern work. They might be summed up the following manner :—

(1) True appreciation of smithcraft. Using as a means of expression markin which were hammered on the surface of t material, so arranged as to give variety a delicacy of feeling to members that wou otherwise express little more than line form (3) The introduction of ornamental featu placed so as to obtain by the superimposing one worked flat surface over another, a solid so necessary in true metal work. (4) For t first time since the early work, the desire allow the metal to speak for itself without aid of an unmetal finish.

The markings referred to were produced

Inside Pavilion Grating, from the Paris Exhibition, 1926.

BY MR. EDGAR BRANDT.

imate smithing, the actual tools. however, determined by the craftsman.

French critic has said, in referring to style of modern metal work, that at of M. Edgar Brandt was famous for its nth and rich colouring, its facile elegance, arresting splendour; while that of M. ard Desvallières was noted for its bar- n arrogance, with even a suggestion of dy. This fantasy and rare freedom in joyful ease in "hand writing," if one l use such an expression, characterised the t of the old master Emile Robert, the rer of artistic metal work. The art of M. o was recognised by its perfection of detail, harm of grace and its richness unspoilt by usion; that of M. Jacques Bregeaux by partan severity. Precise and didactic was genius of M. Raymond Subes, who was the lator of telling effects. From M. Schenk ad grilles sober and reserved in their com- ion; from the brothers Nic we had lamp gs that depended upon skilful grouping of for the beauty of their effect; from ns we got the noble and distinctive works of les Pignet. As to M. Pierre Yung, the comer to this famous concourse, he was ossessor of genius and pure taste." To his f French designers I would like to add the e of Paul Kiss, whose work was charming delicate throughout.

r. A. B. Reed, in prefacing his remarks, said vas not a craftsman but merely a humble gner of wrought-iron work. He was an nple of the modern tendency, which was to gn for others to carry out. Coming to his ect, he said French wrought-iron work was cal of all modern styles; they set the pace aris, chiefly through Edgar Brandt. Sincerity the keynote of the movement. While some he French specimens of ironwork might act nspirations for others, some of the styles d become dead through the weakness of gners following after, who "lifted" a utiful *motif* indiscriminately. That was orable. A great point about Brandt was he was an iron worker himself and not only esigner. There he had the pull over the nary designer, whose only hope was to design ece and trust the interpretation to a crafts- , and hope for the best. French work lled because they seemed able to give life t. In ironwork design, the questions of hts cropped up. In a drawing, one could no idea of what the metal would look like finished form. Regarding the methods in the craft, there could be no real reason oxy-acetylene welding should not be used. as the welding that was the process, not the hod of welding. Mr. Hamp had said the ch were a nation of artists, and in his own ion their work had always been of interest. he compared Wembley with the Paris 1926 bition, there was something alive in Paris dead in Wembley. In the examples of ch ironwork, one realised more and more their charm was in the art of texture. treated surfaces with colour, hammer s or ribbing, in fact, in a thousand ways. garding processes, there was no reason why hould not employ modern tools. When one ght of modern arts, one immediately re- l the art of printing, and although the craft n old one, yet it would be in a sorry way y were the old methods rigidly adhered As it was, printing was better to-day than r had been, and it would go on improving.

Discussion.

the discussion which followed Mr. Reed's ks, Major Pringle said that, at all costs, ng must be avoided. Must we in England s copy? English art was dreary—always dy of archæology—a copying of what had done. Regarding the question of what modern ironwork, it was hard to define. nearest he could get was a style that had been done before. Ironwork, he thought, l look like iron and not like lacework. h ironwork was good about 1180, but from on we owed a lot to France. Ironwork had etion. It was strong and it must look . It must always be designed in character he work it was intended for. Proportion cale were two points of extraordinary importance to be remembered in designing. When a designer was making a drawing, he made it in small scale, perhaps 1 in. to 1 ft. Then, if he were unwise, he sent it off to the smith. He would advise all who wished to design, to draw at least a small portion full size. Little models in cardboard were also useful in gaining true appreciation. He was glad to see that the architectural profession was at last realising the true worth of ironwork and its value in architecture.

Mr. J. M. Pirie said he completely differed from the idea of the previous speaker that ironwork could not look like lace-work and quoted the views of Mr. Howell S. Creswell, of New York with regard to Edgar Brandt's designs as follows:—"There is now a whole school of modern iron designers, which corresponds exactly to the Modern French School of Interior Decoration. In many of their exhibitions one often is astonished to see lace window curtains and wrought iron ornaments seemingly made in the same way, the former of linen threads and the latter of iron threads. One of the most recent examples of this paradox was the creation of silk stuffs inspired from the intricate and beautiful wrought-iron designs of Edgar Brandt. This is all interesting in showing the common relationship between fabric designs and the designs in wrought iron. It is still more interesting to know that the most ancient iron gates in the Orient were often copied in design from famous Persian and Arabian carpets." He gave an interesting sidelight upon Edgar Brandt, who, before the war, had thirty-seven craftsmen in his employ. Now he had as many designers alone as he had had previously craftsmen, the latter now numbering over 300. Brandt himself was a man of an enquiring turn of mind, and would never leave anything without exploring it first himself.

Mr. Llewellyn Roberts said that technically they had heard little. One of the chief difficulties that the modern ironworker encountered was the variation in the quality of iron which was not always pure charcoal iron. The prevention of rust was a very great difficulty, but to some extent it could be prevented by the ironwork being well-hammered, thus closing up the pores. In our English atmosphere, however, it was not possible to protect ironwork adequately, even by depositing a non-ferrous metal on the surface, since even that would in time oxidise. For work to be exposed to the open air, it would be best to magnify texture to protect it.

Mr. J. B. King said that designs had greatly improved. He thought there was a commercial opening for the craft. He did not agree with all refusal to copy other designs. After all, there was nothing new under the sun.

Mr. H. Turner said that he refused to acknowledge that the English were a nation of copyists. With regard to preservation, he said, in his opinion, the solution lay in experiments with amyl acetate. Dealing with the relations of the architect and craftsman, he said that in all good architecture one was bound to admire the craftsman's work. The latter had been ignored for the last twenty years, but architects were beginning to realise that the craftsman was an important man. Co-operation of architeet and craftsman was the need of the future.

Mr. K. Anns said that craftsmanship came down to a matter of cost. In England people would not pay for good work. The French paid more and so encouraged their crafts.

Mr. E. Hobbs related that he had been told of three methods which Edgar Brandt used to preserve his iron: First, the fusing in of white shellac; secondly, a kind of oil process similar to the treating of a gun-barrel; and, lastly, a deposit process in which he fancied the metal used was lead.

Mr. Harold Curwen then closed the meeting with an expression of thanks to those who had read papers or taken part in the discussion.

Inside Pavilion Grating, from the Paris Exhibition, 1926.

By Mr. Edgar Brandt.

SOCIETIES AND INSTITUTIONS

A.A.S.T.A. (METROPOLITAN DIVISION).

Visit to Woolwich War Memorial Hospital, Shooters Hill.

By kind permission of the secretary, Mr. Radford, the architects, Messrs. Pite, Son & Fairweather, and the builders, Messrs. Foster and Dicksee, a number of members of the Metropolitan Division of the Association of Architects, Surveyors, and Technical Assistants spent a very interesting afternoon recently inspecting the Woolwich War Memorial Hospital, Shooters Hill, now in course of construction.

The site (writes a correspondent) is about 415 feet above sea level, in the midst of ideal surroundings. The buildings visited form the first section only, which consists of four wards of 25 beds each, a maternity unit of eight beds and two isolation wards. In addition to the administrative offices and central station, there are sunlight and electric therapeutic departments. Two more sections remain to be constructed before the scheme is complete, and when finished the area covered by the hospital and grounds will be 13½ acres. The external elevations are in multicoloured bricks with red-brick facings, with a cornice constructed of concrete left from shuttering, which gives a very pleasing effect. The main front entrance is built of Portland stone.

To enable the visitors to obtain an idea of the hospital the plans were first inspected, and a résumé of interesting items was handed to them. Mr. Pite explained many of the preliminary difficulties encountered concerning the levels of the site, and the disposal of the soil, before the party set out to examine the actual buildings. Starting with the administration block, the party was conducted through the various offices, dining-rooms and kitchens to the Memorial Hall, which is in remembrance of 2,100 local residents who lost their lives in the war. It is not yet completed, and the intention is that it shall be panelled in various coloured marbles. The construction of the dome is a good example of concrete left from shuttering, the finish being particularly good.

The nurses' and matron's quarters, and operating theatre, with its plentiful supply of light, were next visited. A special feature of these rooms were the coved cornices, terrazzo and tile dados, granolithic skirtings, and coves, where all the angles were rounded; the window sashes are fitted with stamped rounded metal angles, all of which are effective aids in ensuring cleanliness and the avoidance of dust and dirt.

In the wards the keynote is simplicity, entirely devoid of ornament; but the diminishing beams in the ceiling retrieve the plainness, and give interest to what would otherwise be a large flat area. On entering the sun balcony, it was noted that the columns were of reinforced concrete again left from shuttering. From this balcony a beautiful view of the surrounding country is obtained. An excellent idea has been carried out with regard to the areas, these being treated as Dutch tea gardens.

After the visit the party were entertained to tea at the Fleetbrook Hotel. After tea Mr. Holden, on behalf of the Division, proposed a vote of thanks to all who had contributed in making the visit so interesting and instructive. Hospital planning and design, he said, presented extremely difficult problems to the architect, and they were grateful for the opportunity of learning many lessons from the excellent example they had been privileged to inspect that afternoon.

Mr. Pite briefly replied.

THE COLLEGE OF ESTATE MANAGEMENT.

The session of Special Post Graduate Lectures at the College of Estate Management, Lincoln's Inn Fields, came to an end on February 7, when Mr. Sydney A. Smith, F.S.I., F.A.I., gave his second lecture, and dealt with the valuations of factories and flats. The lecturer said that the first consideration in the case of a factory was position, and in respect to position the most important thing was the vicinity of labour, skilled or unskilled, according to requirements. If there was not ample labour in the neighbourhood a newly established factory had to build its own houses for its workpeople, which was a costly procedure and earned only a small return, although, of course, on the other hand, good housing meant a contented staff. A factory must also be situated in a place where adequate power was available, which in this country was coal, and must have access to gas and electricity supplies. Another great desideratum was that the factory should be in the neighbourhood in which its own raw materials were found—a beet sugar factory, for instance, should be near where beet was grown. Water supply was another important consideration in many manufactures, though it did not follow that a works which had a river frontage could take up unlimited water from the river for nothing; some firms paid rather heavily for this privilege. The facilities for transport, of course, would have to be looked to, and it was a great advantage for a factory to have access to two railways, as competition brought down the charges for freights. Another point in determining the value of a factory site was the advertising facility, as, for instance, in a prominent position on a railway line nearing an important station. And in assessing a factory the valuer must not forget the question of the local rates. The method of valuing was, as with other property, to take the rental value multiplied by the appropriate number of years' purchase. One means of ascertaining true rental value was by calculating the net available floor space, and pricing it at a figure which, however, must vary considerably with conditions. Possibly the average standard of value of factory floor space was one shilling a foot.

Flats, again, were valued in the same way as other property. It was a problem simply of finding the net rent and multiplying it by a number of years' purchase. In the case of flats the matter was relatively simple because as a rule there was only one class of purchaser of a block of flats, namely, the investor. Mr. Smith indicated the various outgoings which had to be borne in mind in the upkeep of a block of flats, and how planning was of greater importance in the case of flats than in almost any other property. Situation also was important, and the kind of aspect from the windows had to be regarded. It was a serious drawback to a flat if most of the windows looked out upon a wall between blocks. If there was a passenger lift practically all the flats above the ground floor carried the same rental; if there was not a lift the first floor carried the rental, and above that each floor might be considered approximately 10 per cent. less than the floor immediately below. Flats were very expensive to build, and rather difficult to finance in building. The valuer had to try to get down to a fair average rent, and one which was likely to be maintained in future as the basis of his valuation.

Sunlight Lost through Smoke.

Speaking on "Sunlight" at Gresham College, E.C., Professor Leonard Hill said they had got rid of sewage out of water and had cleaned up the streets and courtyards. The great hygienic reform demanded to-day was to get rid of sewage out of the air. The known loss of sunlight through smoke pollution was the visible rays, the heat rays, and the ultra-violet rays. Records kept during the last two years showed that a sanatorium in Oxfordshire received three times the amount of ultra-violet rays that Kingsway received. Ultra-violet rays, which were so necessary for health, did not pass through ordinary glass, but they did penetrate quartz and the new vitaglass.

ROYAL INSTITUTE OF BRITISH ARCHITECTS

NOMINATION OF ROYAL GOLD MEDALLIS

At a general meeting of the R.I.B.A., he on Monday, February 14, Sir Herbert Bak A.R.A., was nominated by the Council for t Royal Gold Medal, 1927.

Election of Members.

The following Members were elected:—

As Fellows.

W. J. Brown.	F. E. Mennie.
P. H. Coleridge, M.C.	T. A. Moodie.
E. C. Davies.	E. Penfold.
J. M. Easton.	H. W. Allardyce.
A. H. Foster.	F. G. Cundall.
B. P. Gaymer.	G. W. Ferguson, J.P.
W. Goodchild.	C. Cressey.
C. D. Hawley.	J. Peddle.
Col. W. A. Henderson, C.M.G., D.S.O., V.D.	J. W. Wilson.

As Associates.

W. A. F. Bowen.	L. G. Thomson,
J. A. Cosh, B.Arch.	F.S.A.(Scot.).
S. H. Lloyd.	D. T. Wallis.
C. T. Prangnell.	C. N. Wallnutt.
E. Rugg.	

As Hon. Associate.

M. A. Buckmaster, A.R.C.A.

As Hon. Corresponding Members.

Professor Paul Bonatz.	Ludwig Hoffmann.
Professor Theodor Fischer.	Professor Fritz Schumacher.

Tite Prize and Soane Medallion.

The attention of intending competitors called to the fact that the preliminary competitions, consisting of twelve hours' "*en loge*" for the Tite Prize and the Soane Medallio will be held on April 7 and 8 respectively, a the R.I.B.A., and at local centres. (*N.B.*—Th dates for the Competitions have been advance from July.) Applications for admission to th preliminary competitions, which must be ma on the official forms to be obtained free at th R.I.B.A., must be sent to the Secretary of th Board of Architectural Education so as t reach him not later than March 26.

Exhibition of Architects' Working Drawings.

An Exhibition of Architects' Working Dra ings will be held in the R.I.B.A. Galleries fro Monday, February 28, to Friday, March 11. Th exhibition will be open daily between the hou of 10 a.m. and 8 p.m. (Saturdays, 5 p.m.), an will include drawings lent by Mr. E. Guy Dawb F.S.A., President R.I.B.A. (a house); M Michael Tapper, A.R.I.B.A. (St. Mary's, Han gate); and Messrs. Granger & Leatha AA.R.I.B.A. (Kensington Kinema).

A special students' evening will be held at t exhibition on Thursday, March 3, at 8 p. All students are cordially invited to atte It is hoped that the architects who have l the exhibits—or their representatives—will present in order to explain the drawings students. Refreshments will be provid and no cards of admission are required.

International Exhibition of Architectura Drawings, Australia.

A request has been received by the R.I.B that the Exhibition of British Architect Drawings which is being sent to Melbou Australia, for the International Exhibit there, in May, 1927, shall be forwarded Sydney at the close of the exhibition in M bourne. As the exhibition is primarily inten to interest the general public, it will consis rendered elevations, perspectives, sketches, Architects who are willing to send drawings this exhibition for selection by the R.I.I Exhibition Joint Committee are requested make immediate application to the Secre R.I.B.A. for the necessary form and particul The works will be required at the R.I.B.A the end of February for shipment to Aust early in March.

THE GREATER LONDON HOUSING CAMPAIGN

V.—LOCAL AUTHORITIES' PROGRESS UP TO SEPTEMBER 30, 1926.

By JAMES PORR.

previous articles under this heading* the ess of the Greater London Housing Cam- was reviewed as at September 30, 1925, March 31, 1926. The purpose of this e is to bring the review up to September 30,

AL AUTHORITIES' OUTPUT OF HOUSES IN APRIL–SEPTEMBER.

th in London and elsewhere each new ear since 1924 has seen an output con- bly in excess of that of the last previous ear; but there has been, especially in on, an extraordinary spurt since last . The table at foot of columns 3 and 4, comparative figures of recent progress in on.

e local authorities of England and Wales leted 36,742 houses between them in the six hs from April 1, 1926, as against 24,696 in revious six months, thus bringing their war output up to 270,406. The correspond- ures for Greater London were 5,047, 2,606, 1,053 respectively. London's share of the early output of England and Wales had, 1924, been steadily falling, till in the half- ended March 31, 1926, it was little more one-tenth; but in the half-year ended mber 30, 1926, it rose again to close on one- th, a welcome return to the proportion of

th the L.C.C.'s output and that of the other ocal authorities of Greater London was, in ast six months, nearly double that of the ous six months, whereas outside London orresponding increase in output was only r cent. The L.C.C. were, as usual in recent , responsible for about half the total output. aggregate post-war output was, by mber 30, 1926, 14,290, or 35 per cent. of 41,053 houses completed by all the local rities of Greater London together. Their ge weekly output in the last six months 4. a little below their record of 98 in 1922-3.

TRIBUTION OF LOCAL AUTHORITIES' NEW HOUSES.

e distribution of the 5,047 houses com- d in April–September is shown in the wing table:—

L.C.C.'s Houses.—Of the L.C.C.'s 2,437 , 1,447 are in Becontree, some 11 miles he centre of London, and 565 in Lewisham, he south-east boundary of the county. nts of extra-metropolitan areas are not ed as tenants of these 2,012 houses, and it y only people working in the easternmost uthernmost metropolitan boroughs who ake much use of them; people who work er metropolitan boroughs find them ptable on account of the expense and loss e attaching to journeys to and from work. remaining 425 L.C.C. houses, only the 282 hampton and Tottenham are available for eral public. The others—111 in Wands- and 32 in Tabard-street—are reserved for

BUILDER of January 22 and July 9, 1926.

families whom the L.C.C. have to remove from areas scheduled in slum-clearance schemes and from sites required for new schools. Since the 1921 census only about 600 houses not so reserved have been provided by the L.C.C. in the north-western quadrant of Greater London, where—to take only those boroughs in which overcrowding in tenemented houses forms the crux of the housing problem—no less than 52,525 people were found living more than three per room in Kensington, Paddington, St. Marylebone, St. Pancras, Islington, and Finsbury, at the time of the 1921 census. There is, however, hope for the overcrowded families in these boroughs in the progress now being made in the development of the L.C.C.'s new estate in Hendon.

(*b*) *Other Local Authorities' Houses.*—Apart from the L.C.C.'s work, there has been, in the six months since last March, as compared with the previous six months, a notable increase in the number of authorities who are building and in their average output. These authorities do not, however, cater for people residing outside their respective areas; so the fact that no less than 59 of the 124 authorities completed no houses during the six months is much to be deplored. There are still eight of the 42 authorities south of the Thames and 26 of the 82 north of the Thames of whom not one has provided 80 dwellings, *i.e.*, an average of 10 per annum, since the war.

RENTS IN THE THREE CLASSES OF SCHEMES.

The 5,047 dwellings completed in April-September, 1926, consisted of 248 under the Addison scheme of 1919; 1,416 under the 1923 Chamberlain scheme; and 3,383 under the 1924 Wheatley scheme. The corresponding figures for the previous six months were 127, 1,340 and 1,139.

(*A*) *The Addison Scheme.*

In the Addison scheme, the rents are fixed by agreement between the Minister of Health and the Local Authority; or, failing such agreement, by the Rent Tribunal. The annual loss is borne almost entirely by the State, the rates contributing only the proceeds of a penny rate. The 248 Addison dwellings were erected—

196 by the L.C.C. (190 in Roehampton and six in Bellingham);
20 by St. Marylebone;
32 by Tottenham.

Weekly rents (including rates) are on the usual high scale, *e.g.*:—

for 3-roomers—16s. to 17s. 6d.
for 4-roomers—17s. 6d. to 20s.
for 5-roomers—20s. to 22s.

Few families earning less than £4 per week can afford to take these dwellings; but, since the loss to the public purse averages in the L.C.C. scheme something like 16s. 6d. per house per week (nearly £43 per annum), no reduction in the average weekly rent of 13s. 6d. plus rates can be expected.

(*B*) *The Chamberlain Scheme.*

In the Chamberlain scheme the rents are fixed by the Local Authority, while the annual loss is borne up to £6 by the State for 20 years, and any balance by the rates. Of the 1,416 Chamberlain dwellings, 239 were erected by the L.C.C. and 1,177 by 34 of the other 124 Local Authorities.

(*a*) *L.C.C. Houses.*—Of the L.C.C. houses, 86 are in Becontree, and 143 of the remaining 153 are reserved for tenants from slum-clearance areas, viz., 111 in East-hill, Wandsworth, and 32 in Tabard-street; and only the 10 in Roehampton are available for the general public. Thus only 96 of the 239 contribute to reduction of the house-shortage; the remaining 143 are merely substitutes for dwellings newly closed to human habitation.

The weekly rents of the Becontree houses run
from 12s. 8d. to 14s. for 3-roomers;
from 14s. to 16s. for 4-roomers;
from 16s. 8d. to 17s. 4d. for 5-roomers.

These are a good deal cheaper than the Addison rents; but in conjunction with cost of travelling to and from work are too high to permit poor families to take these dwellings, unless they can find work within easy reach of their new homes. It is a significant fact that in the year 1925-6, 454 of the 5,969 tenants gave up their dwellings on the Becontree estate, while only 226 of the L.C.C.'s 5,840 post-war dwellings outside Becontree were given up.

Unlike most other local authorities, the L.C.C. supplement the State subsidy by a considerable subsidy from the rates, in order to keep down the rents. The average annual subsidy from the rates appears to be more than the normal £4 10s. of the Wheatley scheme; for at Becontree the rents of Chamberlain houses are about 6d. per week less than those of corresponding Wheatley houses. Exact figures are not yet available, as the estates are not yet fully developed; but the average loss per house is probably about 6s. per week, of which the State pays 2s. 4d. and the rates 3s. 8d.

(*b*) *Other Local Authorities' Houses.*—Of the 1,177 Chamberlain dwellings outside the L.C.C. contribution, the only considerable contributions in London County were 24 by Kensington, 67 by Lambeth, and 62 by Wandsworth Borough Council. The chief contributions outside London County were:—

Enfield.....	176	Sutton	92
Wealdstone ..	75	Coulsdon	53
Molesey	51	Southgate	47

Twenty-five other authorities contributed 490 dwellings between them. Weekly rents are high, *e.g.*, for four-roomers, 15s. 4d., 18s. and 20s. 6d.; and for five-roomers, 16s. 11d., 18s. 6d., and 25s., including rates, and they vary greatly from place to place, but there are few, if any, that families earning less than £4 per week can really afford to pay. The rents could be reduced by about 2s. 4d. per week,

if the local authorities would provide from the rates a subsidy equal to the State subsidy of £6 per annum for 20 years, as was contemplated when the 1923 Act was passed; but most Councils have decided to put no burden on the rates, presumably because they have plenty of applicants who can afford the higher rents. In some cases these rents are the same as those of similar L.C.C. houses, in spite of the fact that the latter are subsidised from the rates and the former are not. This seems to show that the L.C.C. have had to pay a good deal more than other local authorities for their houses; but figures of cost of the L.C.C.'s Chamberlain houses have not yet been published.

(C) The Wheatley Scheme.

The main object of the Wheatley scheme was to secure the letting of Wheatley houses at rents commonly paid for the time being for pre-war working-class houses in the same neighbourhood. For 40 years the annual loss on the Wheatley houses is borne up to £9 per house by the State. Any further loss is borne up to £4 10s. by the rates; and the local authority meets any excess over this £13 10s. from rents or rates or both, as it pleases. It is only by such share of this excess as is not to be borne by the rates that the average rent per Wheatley house may exceed the average rent of pre-war working-class houses in the same neighbourhood. Of the 3,383 Wheatley houses completed during the six months under review, 2,002 were built by the L.C.C., and 1,381 by 34 of the other 120 local authorities.

(*a*) *L.C.C. Houses.*—The 2,002 L.C.C. houses were all on the same estates as the 744 built in the previous six months, viz., 1,361 in Becontree, 559 in Downham, and 82 in White Hart-lane. Those at Becontree are still let at weekly rents varying from 13s. 4d. for three-roomers to 18s. for five-roomers, while those at Downham are about 1s. dearer. The phenomenon that these more highly subsidised houses are let at rents rather higher than those charged for similar houses built under the 1923 Act still continues. The explanation is not far to seek. Just before last summer's recess the Minister announced in Parliament that the supply of new houses was beating all records; that since the passing of the 1923 Housing Act loans to local authorities for building advances had amounted to £29 millions against less than one million in the previous 24 years; and that, in 1924, Building Societies had advanced over £40 millions against an annual average of £9 millions in the five years just before the war. About the same time the Chairman of the Housing Committee warned the L.C.C. that on account of a continuous rise in cost not only of materials and of labour, but also of money, the loss on Wheatley houses would, in spite of the high rents, probably involve a charge of more than £4 10s. per house per annum on the rates. The rate of interest on which estimates were based in 1923–5 was 4¾ per cent.; but L.C.C. stock issued in February, 1926, cost 5¼ per cent. In these two announcements we have cause and effect set out. So long as the abnormal demand for houses too costly to be available for the more needy classes continues to be stimulated by liberal subsidies, loans and advances, we cannot expect to see the cost of houses revert to normal, and therefore the Wheatley scheme must remain quite ineffective as a device for lowering rents.

(*b*) *Other Local Authorities' Houses.*—Outside the L.C.C. estates the only contributions of more than 50 Wheatley houses were—

Islington	148	Croydon	148
Willesden ..	112	Woolwich	76
Kingston ..	62	Surbiton	50
Chislehurst ..	50		

There are remarkable differences between the rents charged by different Councils for houses with the same number of rooms. Take 4-roomers for instance: Willesden charge 20s. 8d., and Croydon, 19s. 4d. per week, including rates, both estimating the annual charge on the rates at £4 10s. per house; whereas the corresponding rent in Kingston is no more than 13s. with the same annual charge on the rates. Next door, in Surbiton, the rent is 14s. 7d.; but the annual charge on the rates is estimated at only £1 per house. In Woolwich, the Council still hold that local needs call for the limitation of net rent to 10s. 6d., so that with rates and electric light charges the tenant pays about 15s. 6d.; but this entails an annual charge on the rates, which on some estates approaches £14 per house. These variations are very baffling to the student of housing finance. Constructional cost should not vary much from place to place within the Greater London area. Land, it is true, is very much more costly in the centre than in the suburbs; but the more expensive sites are not used for subsidised houses, and central sites carry many more dwellings per acre than the cheaper suburban sites; so the difference in cost of site per dwelling should not make a difference of more than a few shillings in weekly rent. Other causes of high cost and high rent may be special difficulty in developing a site, high rate of interest on loan capital, specially large rooms, unusual amenities, heavy local rates or grasping contractors; but, however good cause there may be for high rents in particular places, the fact remains—and it is the only fact that matters to the bulk of the ill-housed, for whose special benefit the Wheatley Act was intended—that there are only a very few subsidised houses available for families who earn less than 70s. per week, and cannot afford to spend more than 15s. per week on rent, plus travelling expenses. Such few houses as are available are mostly 3-roomers, and are, of course, too small for large families; and it is the large family with a single earner that forms the largest class among those who most need early relief from serious overcrowding.

Prospect.

There is no prospect of any improvement in this unfortunate position for, at any rate, the next twelve months; for the Minister's recent order for reduction of the subsidy in respect of houses not completed by next October has added a new stimulus to the demand for early completion of houses; and with the industry suspicious that the housing programme may be curtailed in view of the intense strain it is putting on the Exchequer, and therefore reluctant to embark upon abnormal recruitment of skilled workers, the shortage of such workers will probably become more marked than ever. Thus, cost of houses and therefore rents are likely to rise rather than fall; and the more houses are built, the greater will be the rise in cost, which must be met by increasing either rents or the burden on the rates.

The L.C.C. have adopted the figure of 50,000 houses as indicating the Greater London house-shortage in 1919, and last July the Chairman of the Housing Committee told the Council that this shortage had by the beginning of 1925 risen to 78,000, and then, thanks to the vigour of the 1925 campaign, fallen to 72,000 by the end of that year. If the success of the campaign depended merely on numbers, 1926 might be regarded as a record year; but location and rents of the new houses must be taken into consideration also; and, that being so, this third six-monthly review of the situation, while it records unprecedented progress in the supply—at great expense to the public purse—of new houses for families earning £4 or more per week, must unfortunately record also the same conclusion as the two previous reviews, *viz.*, that the great bulk of the London families, who need early relief from bad housing, particularly those residing in the north and north-western Metropolitan Boroughs, are not getting that relief, and are not likely to get it for a long time yet, under the London housing campaign, as at present conducted.

New British Embassy, Washington.

The Commission of Fine Arts is understood to have approved the plans of the new British Embassy building. The Commission has declared that the plans "are appropriate for the uses for which it is intended, are expressive of the dignity of the nation, and are imbued with charm." Sir Edwin Lutyens, the architect, who drew up the plans, is expected to go over in the spring to supervise the construction of the work.

ROMAN DECADENCE

THE THERMAE AS THE CLUBS OF RO

Sir Banister Fletcher, V.-P.R.I.B.A., a recent lecture at the Central Schoo Arts and Crafts on the construction equipment of the great Roman therma baths, said that these gigantic thermal estab ments showed us those old Romans as masters in matters of water supply, ce heating and complicated planning. These were designed to minister to the pleasure of a population that Emperors sought to pla The old spirit which had made Rome the mis of the world was flickering out, and men's m were turned from arms and war in distant vinces to the pursuit of pleasure and pers indulgence, and these magnificent and m mental buildings were the last word in luxu living, providing as they did not only for bat lounging, gossip, but even lecturing, an these marble halls and colonnades the gi youth of Rome chatted over the news, criti the Government, and indulged in scandal.

Buildings designed to meet such complic requirements involved a fresh developmen architectural planning, and they could onl carried out by using slaves for labour and crete for material. The thermae of Cara formed an important study in planning modern requirements. The central block, its central tepidarium, flanked by the f darium, calidarium, and countless chambers corridors, was as vast as that of Westmin Palace, including the Great Hall itself, an was erected on a vast platform which was out like a park. Other baths were erec throughout the Roman Empire, such as Pompeii, in Italy, Timgad in Africa, or B itself in our own country, and substan remains existed at the present day to rem us of their former magnificence.

VIEWS OF OLD LONDO

The collection of prints and water-col relating to London in the possession of L.C.C. amounts to over 6,600 items, and been acquired either by bequest, gift or purch It has been the Council's practice for some t to place on view in one of the rooms in County Hall, Westminster Bridge, S.E a number of its various prints and water-col selected and arranged so as to form a cohe whole. At first the basis of arrangement chronological, and exhibitions illustrative (1) Tudor London, (2) Stuart London, Eighteenth Century London, and (4) E Nineteenth Century London were given. It afterwards decided to vary the basis of arra ment, and for a time the keynote will be t graphy, not chronology.

The second of the new series (the first b that of Islington and Finsbury), illustrating topography and history of St. Pancras, is on view. Over 140 items are shown. An the places and buildings illustrated in the pre exhibition may be mentioned: Kentish T Camden Town, Tottenham Court, St. Pan Old Church, Agar Town (now for many y a thing of the past), Bagnigge Wells (one o most popular resorts of the Londoner), G Inn-road, King's Cross (the old Cross, the Heaps, and the Panharmonium), and Foundling Hospital.

The room containing the drawings is incl in the itinerary for visitors to the County The general public are admitted to view ce portions of the hall (entrance in Belvedere-r during the undermentioned hours:—

Saturdays: From 10.30 a.m. to 12 n and from 1.30 p.m. to 3.30 p.m.

Easter Monday, Whit Monday, and A Bank Holiday: From 10.30 a.m. to 12 r and from 1.30 p.m. to 4.30 p.m.

Arrangements can generally be mad persons interested to view the exhibitio any day during office hours. Applicatio this purpose should be made at Room N (the Members' Library). In cases in parties of several persons desire to see the ings, application should be made by let

THE LONDON BUILDING ACTS AND THEIR APPLICATION.—VI

By H. V. MILNES EMERSON, A.R.I.B.A.

SECTION 14.—This section of the 1894 Act as been repealed by the Act of 1898, and the evised section now reads as follows :—

"In every case where any new building or ew structure or any part thereof is erected, or ny building or structure or any part thereof extended in such manner that any external all of such building or structure, or (if there e a forecourt or other space between such xternal wall and the roadway) any part of ny external fence or boundary of such fore- ourt or space shall be at a distance in any irection from the centre of the roadway of ny street or way (being a highway) less than he distance permitted under Part II of the rincipal Act, or contrary to the conditions and erms (if any) subject to which the Council or ribunal of Appeal has sanctioned the erection r extension of such building or structure, the ouncil may serve a notice upon the owner or ccupier of such building, structure, fence, or oundary, or upon the builder, requiring him o cause such building, structure, fence or oundary or any part thereof, to be set back o that every part of any external wall of such uilding or structure or of the external fence or oundary of such forecourt or space shall be t a distance in every direction from the centre f the roadway of such street or way not less han the distance permitted under Part II of he principal Act, and shall be in accordance ith such conditions and terms (if any) as the ouncil or the Tribunal of Appeal may have rescribed."

Note.—In the case of L.C.C. *v.* Aylesbury Dairy Co. (1898, 77 L.T. 440) it was held that ection 14 of the 1894 Act did not empower he Council to require an owner (who had rected new buildings and left the old boundary all with a space between same and the new uildings) to set this old boundary wall back lthough it came within the prescribed distance.

15. This section provides for payment as to ompensation in certain cases.

Note.—For the purpose of this section the xpression "owner" has the same meaning s in the Lands Clauses Acts (1845) section 3.

16. This section provides "as to erection of uildings at less than prescribed distance from entre of ways, not being highways."

17. This section provides for "sanction to nstruction of new buildings at less than escribed distance."

The remaining sections, 18 to 21, of this rt of the 1894 Act, deal with regulations, peal, and certain exemptions.

RT III.—LINES OF BUILDING FRONTAGES.

22. Mode of proceeding with regard to ildings beyond line of street :—

(1) No building or structure shall, without the consent in writing of the Council, be erected beyond the general line of buildings n any street, or part of a street, place, or ow of houses in which the same is situate, n case the distance of such line of buildings rom the highway does not exceed 50 feet, or within 50 feet of the highway when the listance of the line of buildings therefrom mounts to or exceeds 50 feet, notwithstand- ng there being gardens or vacant spaces etween the line of buildings and the highway. Such general line of buildings shall, if required e defined by the superintending architect y a certificate, such certificate to be issued ithin one month from the date of the pplication therefor.

(2) This section shall not apply to any uilding or structure erected after the com- encement of this Act upon land which either the commencement of this Act or at any me within seven years previously has or all have been lawfully occupied by a uilding or structure.

ote.—Under this section the general line of buildings in any street, &c., is determined by the Superintending Architect, and a certificate must be issued by him within one month after application has been made for same. The applicant has the right of appeal to the Tribunal against such certificate if necessary.

The position of the general building line falls under two classes as follows :—

(1) The consent of the Council is required when the building line is less than 50 ft. from the highway;

(2) When the building line is more than 50 ft. from the highway, no building may be brought nearer than 50 ft. from the highway without the consent of the Council.

If one is forming new streets from off an existing main road (the latter being suitable for shops), before building is commenced in these new streets the end shops should be built first with the return walls at the prescribed distance from the centre of the roadway, *i.e.*, 20 ft., otherwise these return walls will have to follow the line of frontage in the side streets. Assuming that houses built in the side streets have a building line 15 ft. from the back of the pavement (in a 40 ft. road, this would mean 35 ft. from the centre of the road), the return walls of the shop would have to conform with this line if commenced after buildings had been erected in the side road, or at least on a line equal to half of this building line, *i.e.*, 7 ft. 6 in. if allowed by the Council. In any case, this point is worth watching with land suitable for shops at £20 or more per foot frontage. The above relates to positions where a new building line is created.

A flank wall with footings have been held not to be a building, structure or erection, within the above section (Wendon *v.* L.C.C., 1894, 70 L.T. 94), but a dwarf wall, taken down and replaced with a wall 18 in. thick and 11 ft. high, to be used for advertisements, has been held to be a building, structure, or erection (Larry *v.* L.C.C., 1895, 73 L.T. 106).

If it has been decided to build shops with the flank wall at what will eventually be on a line in front of the building line of houses or other buildings to be erected in the side street, it is necessary not only to commence but to complete such building before the buildings are erected in the side street. The following case deals with this point.

A building commenced on a corner plot was discontinued when the wall was 12 ft. high. A building line was subsequently established by the erection of a row of houses, the fronts of which were set back in the side street further than the flank wall of the suspended building on the corner site. It was held that the completion of the corner building was a new building erected beyond the frontage line in the side street because the frontage line in the side street had been established before the building on the corner site had been erected. (Wendon *v.* L.C.C., 1894, 70 L.T. 94.)

The general building line is that relating to the main walls of a building, and under certain conditions, as set forth in section 73, bay and oriel windows may project beyond the building line.

A glass and iron portico projecting beyond the general building line and built into the main building, cannot be erected without the consent of the Council. (Coburg Hotel *v.* L.C.C., 1899, 81 L.T. 450.)

Former Royal Mint Burned Down.

An ancient building in the heart of Canterbury was recently gutted by fire. Only the outer walls of the building remain. The premises, which dated back to A.D. 1100, have, it is stated, a considerable historical interest. The building formed part of the Cambium Regis, or King's Exchange, which was one of the two mints in England, and was evidence of Canterbury's importance in those days.

THE WEEK IN PARLIAMENT

WESTMINSTER, *Wednesday.*

The 1927 Session was opened by the King and in his Speech from the Throne, His Majesty foreshadowed the introduction of a Bill for the reform of the law with reference to industrial disputes, and stated that proposals would be made for an amendment of the law relating to leasehold premises, so as to secure to an outgoing tenant compensation for the loss of his goodwill and unexhausted improvements. Proposals for the Amendment of the Companies Acts would also be introduced.

New Bills.

A Bill to provide for the registration of architects has been introduced by Sir C. Kinloch-Cooke and read a first time.

Mr. F. Roberts has introduced a Bill to prolong the Rent Restriction Acts. This measure has also been read a first time.

Cost of Houses.

Mr. Chamberlain informed Mr. H. Williams that the average cost of houses included in contracts let by or in approved direct labour schemes of local authorities during each of the last six months was :—

Month.	Non-Parlour Houses.	Parlour Houses.
1926—		
July	£453 ..	£502
August	434 ..	498
September	445 ..	502
October	453 ..	522
November	422 ..	502
December	463 ..	496

These prices excluded the cost of land and development.

Progress of Building.

Mr. Hannon asked for statistics showing the number of houses erected under the Housing Acts in the years 1924, 1925 and 1926; and also the numbers which had been erected in the same years without subsidy.

Mr. Chamberlain said that the following table gave the information :—

Year.	Number of Houses Erected. With subsidy under the Housing Acts during the year ended in December.	With subsidy under the Housing Acts during the year ended in September.	Without subsidy during the year ended in September.
1924 ..	52,730 ..	36,459 ..	73,032
1925 ..	99,497 ..	92,291 ..	66,735
1926 ..	144,619 ..	131,895 ..	65,689

Condemned Houses.

Mr. Chamberlain informed Mr. Albery that, according to the Annual Reports of Medical Officers of Health, 12,722 houses were reported during the year 1924 as unfit for human habitation.

Gravesend and Northfleet Schemes.

Mr. Chamberlain informed Mr. Albery that up to the 1st instant 309 houses had been completed in Gravesend with State assistance under the Housing Act of 1923, and none under the Act of 1924. The corresponding figures in the case of Northfleet were 105 and 16.

Brickmaking Dividends.

Mr. Bennett asked the Minister of Health whether, in view of the dividends now paid by certain brickmaking companies, he would investigate the high cost of building materials in the light of such information.

Mr. Chamberlain said that the Inter-departmental Committee on the Prices of Building Materials kept in constant touch with and investigated prices of building materials. In their last Report, dated December 22, they stated that they proposed to keep close watch

over the movements of prices in the immediate future and to review the position again as soon as a period of stability had been reached.

Burden of Rates.

Lieut.-Colonel Troyte asked the Minister of Health whether he was aware that many local authorities considered that the administration of the Rating and Valuation Act would add to the burdens of the ratepayers; and whether he had made any estimate as to the amount by which this Act would increase or decrease expenses.

Mr. Chamberlain said that the cost of administering the new Act would depend largely upon the methods adopted by local authorities in the organisation or reorganisation of their staffs. Though the simplifications introduced by the Act should in the long run make for substantial economies, no material was available for an accurate estimate, and it was, in his view, too early to form an opinion of any value as to the comparative costs of the new and the old systems.

Re-Housing.

Mr. Albery asked the Minister of Health if he would impress on local authorities the desirability of utilising the 1924 Building Act primarily to re-house those living in condemned houses; and if he was aware that this was not being generally done.

Mr. Chamberlain said he had already, in a circular recently issued to local authorities, urged them to devote themselves specially to the provision of the type of houses capable of being let at rents within the means of the less well-paid workers. He did not think it was practicable for local authorities, in letting new houses, to limit themselves in the first instance to the class referred to, but he believed it was the general practice to give weight to the claims of those living in condemned houses.

Steel Houses.

Major Elliot stated that at the 5th instant 1,522 steel houses had been erected in Scotland by the Scottish National Housing Co. (Housing Trust), Ltd.

L.C.C. Houses.

Mr. Chamberlain informed Mr. Day that the number of State-assisted houses completed by the London County Council up to February 1, 1927, was 15,452, and the number under construction at that date was 4,371.

Slum Clearances.

Mr. Cadogan asked whether it was the intention of the Government to introduce any legislation this session dealing with slum clearances?

Sir K. Wood said that this matter was engaging the attention of the Government, but the Minister of Health did not think it would be practicable to introduce a Bill during the present session.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

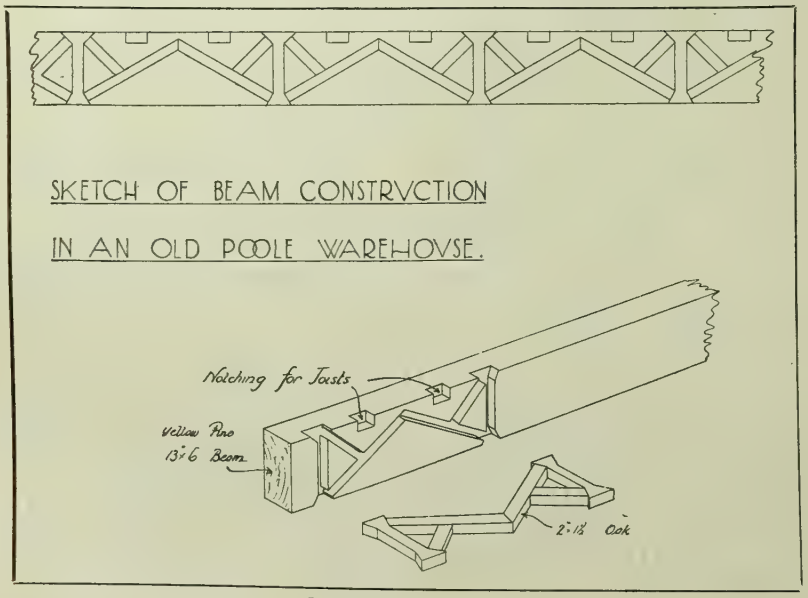
We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—ED.

Demolishing Hollow Walls.

[REPLY TO "H. E. B.," FEBRUARY 4.]

SIR,—Your correspondent has raised a point which has often been in my mind, as to how long a life we can expect from a modern hollow wall. I, too, have hoped to have the opportunity of examining the conditions of an old one during demolitions, but have never had the good fortune. With regard to mortar droppings, I never cease to din into the operative to be particular over this question, and specify battens to be suspended in the cavity while building; but invariably I find room for a good "grouse" about the condition of the ties when I go on to a job, and I have a strong suspicion that the battens find their way out of store after I have turned the nearest corner on the way to the job, and return to roost shortly after my exit. It appears to me that there must always be a eriod between each row of wall ties where the atten has to be taken out and raised, to prevent ts being shut in by the next row above when built in, and surely it is too much to ask for this to be so skilfully executed as to save every loose particle from dropping. The ties within reach can be scraped clear, but the hundreds below just carry their accumulation of rubbish for the rest of their lives. Has anybody discovered the infallible method of doing the job properly? Personally, I look forward to the days when there shall be a way of weatherproofing a wall without destroying its porosity, and as cheaply as by the use of cavity walls. When this arrives, and has been sufficiently tested, I have finished with cavity walling. SOLIDS.



Fire Danger: Departure from Specification.

SIR,—Can any of your readers inform me whether there is any remedy, legal or otherwise, against a contractor or his foreman who deliberately builds a beam into a fireplace in such a manner as to be certain to cause a fire—contrary, of course, to instructions contained in the specifications? Can a criminal charge be brought against one or both for possibly endangering the lives of occupants of the building? ARCHITECT.

Old Timber Beam Construction.

SIR,—We were much interested in your illustrated account of the old timber beams at Middlesex Hospital, and venture to send you a sketch of an old method of strengthening (?) similar beams in an old Poole warehouse.

S. WHITELOCK & Co.

SEE LETTER ABOVE.

Capacity of Dance Halls.

SIR,—It was with great interest I read your illustrated article on the Astoria Cinema and Dance Hall. The dance hall is rated as having a holding capacity of some 1,000 persons. It would be helpful to a provincial man to know if there is any official rule in London for fixing the capacity of such a room where some dance and some sit out. It would seem that the actual dancing space would be uncomfortably full with 400 dancers. If there is no rule, would it be somewhere near the mark to allow ¾ sq. yd. per person on the dancing space and ¾ sq. yd. (to include gangways) for each person sitting down around small tables?

Another point is, in what way is the floor sprung? There seems little space between the dance floor and the concrete below.

ARCADIUS.

By-laws Relating to Buildings and Streets.

[REPLY TO "BY-LAWS," FEBRUARY 4.]

SIR,—It is gratifying to find that "By-law" agrees with my suggestion as to the reasonableness of the requirement of a minimum 5 ft. vertical side to a room in a roof. In spite of the by-law, I wonder how many servants and children are sleeping in rooms with skilling ceilings of totally inadequate average height, because on the plans submitted to the local authority these rooms were marked "box-room," and, owing to their diminutive size, there was nothing to justify the authority taking the view that they were anything else but box-rooms, so had to be approved?

With regard to by-laws as to windows, I think your correspondent will have to admit that I was right in stating that windows can only be required for ventilation purposes. Section 157 (3) of the Public Health Act, 1875, is the one under which by-laws for windows are made, and such a by-law has to come within the scope of the words, "with respect to the ventilation of buildings." Of course, incidentally, such windows do give light to buildings, but they may be placed in such a position (for instance, at the back of a loggia), that although it could not be said they did not give ventilation, they would be of very little use for lighting purposes. It would be very interesting to know just how far local acts have been allowed to go in requiring windows for lighting purposes.

You point out in a recent issue that once by-laws have been confirmed, the Ministry of Health has no powers to interpret, to enforce, nor to entertain appeals. From a fairly long experience, I believe that 50 per cent. of the trouble lies in the fact that local authorities are given no discretionary powers and the Ministry has none to use. Every remedy seems to bring with it its own fresh troubles; but I should be prepared to welcome a Court of Appeal of some sort. Why could not Ministry of Health Board inspectors, having special experience in such matters, be appointed? Each could have a district of fifty or sixty authorities, and with a little arrangement each could be visited actually or in groups in the course of a month. SCRUTATOR.

Profit on Cottage Work.

SIR,—We find there is a great difference of opinion between the architect, builder and purchaser of a cottage in regard to the profit which a builder should make on the cottage. Taking the cost of the cottage to be—labour £208 18s. 2d., and materials, £232 8s. 10d., we should like to know what is a reasonable allowance for overhead charges, which are affected by bad weather, illness, difficulty of getting material, high railway rates, &c. and on the what is considered a fair profit? We try to work at low prices and profits, and pay fair wages. An expression of opinion from you would be very much appreciated.

PRODUCTION AND PROFITS.

Other Inquiries.

To save time, answers to inquiries from "Kaforidua" (Gold Coast, West Africa), "Accra," & "Axim" (India and Queensland) have been sent by post.

THE BUILDING TRADE

BY-LAWS RELATING TO BUILDINGS AND STREETS.—VII

We now come to the recommendations of Committee as to the creation of machinery which disputes as to the true meaning of aws should be determined in advance.

everal suggestions were laid before the mittee for this purpose and carefully con-red in the Report at some length. These e: (1) The setting up of a tribunal on the eral lines of the tribunal of appeal under London Building Act, consisting of pro-ional men with special qualifications in ding matters, one such court or tribunal cover the area of several local authorities perhaps several counties; (2) the setting of a similar tribunal in London at the offices he Ministry of Health, but giving its decisions pendently of the Ministry; (3) the adapta-n of the "party wall" procedure of the don Building Act; and (4) the giving of a er of decision to a representative of the istry of Health acting in and for such an a as was described in the first of the above posals.

The recommendations of the Committee are tainly simpler and involve the institution of new tribunal. They were: (1) That the istry of Health should be empowered to ertain a case stated to them by agreement ween the parties, in cases which the Ministry m suitable, in substantially the same manner they entertain a case stated under section 12 the Poor Law Amendment Act, 1851; that in cases where the parties do not agree adopt this procedure, jurisdiction should be ren to petty sessions to decide beforehand e interpretation to be placed upon a by-law, the application of one of the parties to the pute.

Under the first of the above proposals it was o suggested that in difficult cases it might of advantage if the Ministry were given the wer of stating a case upon a point of law the opinion of a Divisional Court of the ng's Bench Division, such as is given in ation to closing orders under the Housing ts, but otherwise the decision of the Ministry uld be final. Under the second proposal the port states that the decision "on application petty sessions or on appeal to quarter sessions uld have to be made binding in any proceed-s at the later stage, save perhaps on the h Court."

The first of the above suggestions appears to to have much to recommend it. The Report h reference to this proposal states (par. 40): We are not suggesting that the present right either party to have recourse to the ordinary rts should be abolished. We are strongly the opinion that there exists no ground for ating special machinery as the *sole* means the interpretation of by-laws, any more n for the interpretation of any other form law, but if both parties to the dispute, that o say, the builder or building owner and the l authority, are prepared to waive their erent right of having the matter decided in courts, we see no objection to their doing

The Report points out that the academic tion of giving the Ministry, which frames models, the power of interpretation, is weighed by the advantages which would ue from adopting this first suggestion, as would bring to light cases where by-laws working badly, or cases where the models he authorising statutes need any revision, it would assist the present policy of setting a standard, and then allowing alternatives he model forms. For instance, the strength walls is fixed in terms of the ordinary k wall but, under the model, any other er form of walling may be put up, but it must, if designed to serve in place of a brick wall, be so constructed as to give, (except in certain specially provided cases), substantially the same standard of stability, but complaints had been laid before the Committee that in some old by-laws there is not this elasticity, and the Report states that local authorities sometimes object to the allowance of alternatives because their adequacy will come to be determined by a bench of magistrates without technical qualifications to decide such points, whilst 'on the other hand from the builder's point of view the possibility of having to bring expensive witnesses to refute the opinion of the local authority's surveyor, also tends to render nugatory the elasticity of such a clause; therefore the Committee considered that if there were ready to hand a body such as the Ministry, with technical and legal staffs, whose decision could be invoked by agreement between the parties it should greatly facilitate the introduction of such clauses into by-laws, and it would also secure the object sought by those who advocate discretionary control as a substitute for by-laws.

We may here mention that the Ministry of Health has shown enterprise and a desire to assist parties by adopting this suggestion voluntarily, for we have before us a circular containing an offer on the part of the Ministry, where both parties agree, and are willing to forego their rights to go before the Courts, to express an opinion on questions of interpretation. The reference to the Ministry can be made through the Clerk of the local authority and should preferably be made upon an agreed statement of facts, but the circular states that where the facts can be decided upon documentary evidence, questions of fact are not ruled out.

This first suggestion appears to us, as we have already said, admirable, but we wonder whether nothing can be done to improve the second suggestion, which we may repeat was, "That failing an agreement to refer the legality of the rejection to the Minister of Health, either party be given a right to apply to a court of summary jurisdiction, with appeal to quarter sessions, for a declaration whether the rejection was or was not lawful; that any declaration so obtained be binding except in the High Court."

This suggestion appears to us far less satisfactory, although of course, it does provide for what at present does not exist, the right to obtain a declaratory judgment, in a Court of Petty Sessions, but the cases where the parties cannot agree to go before the Ministry are certain to be cases involving questions of the most difficulty, and petty sessions, as appears from the Report itself, is a tribunal the least fitted to decide matters involving interpretation of the law. If, as the Report states, both the local authorities and the builders have found difficulties arise out of alternative clauses because at a later stage the question of their adequacy may come before a Court which the Report admits does not possess the necessary qualifications for deciding such points, and if a change is to be made in the law, why should the parties unable to agree be relegated to the most unsatisfactory tribunal? Almost any other tribunal would be more satisfactory in questions of interpretation beforehand; the county court, for instance, where there is an appeal to a Divisional Court and by leave of that Court a further appeal to the Court of Appeal.

It appears to us that this alternative offered of an agreement to go before the Ministry, or failing agreement, to resort to an admittedly unsatisfactory tribunal, might place a weapon in the hands of a recalcitrant party by which to force a settlement on the other party, as it might be said "Agree with me or I will take you to Petty Sessions." The Committee themselves appear to have recognised that this proposal was the least satisfactory, and that reasonable people would take the first, and we quote the following passage from the Report: "In most cases we imagine where each party is acting on a genuine belief in the correctness of the legal contentions it puts forward, both will consider it important that the decision shall be by a body capable of skilful interpretation, which usually the local bench are not, and will therefore be willing to agree on a joint case for the Ministry of Health, but we think that if for any reason one party is averse from so proceeding the other should not be thrown back into the present unsatisfactory position." This passage emphasises the danger we have indicated above; the person with no genuine belief in his contention may try to force terms on the other party on the threat of taking the matter before an unsatisfactory tribunal, for the only difference made by this second proposal on the "present unsatisfactory position" is that recourse is given to a court for a declaratory judgment, but to a court admittedly the least suited for the purpose. As we have said, the county court would be preferable, but we venture to put forward a further suggestion, that in all cases where a declaratory decision is required beforehand on the interpretation of a by-law, the Ministry of Health should be the first tribunal, whether by consent or not, but that where an unwilling party is brought before it, the appeal proposed in the first case, where the parties come before the tribunal by agreement, (that is the power suggested to be exercised by the Minister of stating a case for the High Court), should be extended, and such a case should be stated at the request of either party.

The only objection to this suggestion would seem to lie in the following passage from the Report (par. 40), "Where the parties are unable to agree upon a case" (that is to refer the matter to the Ministry), "or either party desires to have the matter decided in a court of law, or the Ministry considers that the issues raised are such as would be better decided in accordance with the existing practice, we think that jurisdiction should remain with the Courts. This would incidentally provide a safeguard against a danger that some of us have felt strongly, namely, any tendency to take trivial matters to the Ministry, such as whether a particular mortar was or was not properly mixed. The Ministry having an option whether to entertain a case or not, would presumably decline to be troubled with mere trivialities, and moreover the parties would be unlikely to wish to refer them to London for decision." As the Committee were dealing only with questions of interpretation of by-laws, it is difficult to see how such a question as that instanced in the above quotation as to the mixing of mortar could arise, but under the suggestion we have made, the Ministry could still be left to exercise a discretion as to whether it would entertain a case, and on its refusal the parties would be left under the existing procedure, but in trivial matters that would be no hardship; whilst, where the refusal was based upon the ground that the matter was one best entertained by a Court, provision could be made in these exceptional circumstances that the case should be heard in the County Court.

We submit that our suggestion would be preferable to that contained in the Report, where the parties cannot agree to lay their case before the Ministry, for in such cases it gives the parties a skilled tribunal in the first instance, with full access to the High Court by request for a case to be stated, and it also lessens the appeals on preliminary questions of this nature; but if that suggestion is considered impracticable by those best able to give an opinion, we still think that the second recommendation of the Committee requires reconsideration and amendment.

"THE CINDERELLA OF INDUSTRY"

A LONDON contractor writes :—"Many years of real and active work in the contracting world suggests to me that the above is the correct description of the building industry. In most trades the selling price is based upon a known definite cost of production, to which is added a fairly big percentage to cover 'on costs' and profit. In the building industry the materials are practically all 'ringed,' and the value thereof is easily ascertainable, but the labour costs are most erratic and doubtful. Since labour, as a generality, forms at least half of the cost of building work, it is perfectly correct to state that the builder sells, at an absurd percentage, something of an unknown cost.

"Comparison with other industries shows the futility of the cut-throat competition so prevalent in the building industry to-day. In the motor trade, where most of the work is on a day work basis, the mechanic draws much less than the building craftsman, but is charged up at a rate that would shock the most generous of architects and surveyors—4s. per hour is quite a usual rate to charge. Yet the London Master Builders' Association, in their Day Work Schedule, quote 2s. 4d. per hour for a craftsman, which rate it is occasionally found the builder has a difficulty in obtaining. A common rate for establishment charges on motor work is 50 per cent.; can one picture this rate being agreed to on building work? What can one picture as a reasonable charge in our industry to cover—use of capital, expensive plant, workshops, &c., tendering costs on unsuccessful jobs, establishment charges, highly skilled professional services, margin to cover the selling, based on, to a large extent, unknown costs, contingencies (only provided in contracts for architects' use and never for builders'), increases in costs of materials, and lastly, and often '*leastly*,' profit. Would not the average builder be glad to take, say, a quarter of those percentages ruling in the motor world or, say, the drapery world? Often the estate agent who sells a house receives more for his infinitesimal trouble than the builder with his many risks receives on his enterprise.

"We may divide the contractor's work into two halves, material and labour. Material is practically 'ringed' and 'trusted' to at least 75 per cent. Labour is in a sense 'ringed.' To enable the builders' merchant to function, and to enable labour to function, the services of the contractor are necessary, and the heading of this article is justified if one realises what the contractor gets out of the deal.

"At present there is a distinct lull in the building trade. It may only be temporary, due to the effects of the Coal and General Strike, or it may be the start of one of those unfortunate depressions that occur periodically. In any case, it cannot fail but to have a purifying influence on the cost of materials and the output of labour. The last few years have certainly produced more work, and in the ordinary course this should have had the result of giving the builder a percentage more in keeping with the risks of the trade, but owing to the shortage of labour, this slightly better price has been more than counterbalanced by the lesser output.

"In the medical profession, skill and ability may lead the doctor to Harley-street; in the building trade, skill and ability may lead the contractor to Carey-street, because of the extraordinary want of skill found amongst some of the smaller competitors in the contracting world. The estimator who leaves the most out is the man who secures the contract. A premium on ignorance. It is perfectly true this sends also the inexperienced contractor to Carey-street, and at that one could leave the matter to work out its own end but that the effect of incompetent estimating tends to drag down and prostitute a noble calling.

"The writer, with over thirty years of actual experience as an estimator, later as a contractor, has frequently gone to the trouble of re-pricing a lost job at cost of material (mostly tariff) only, and pricing labour at nil (rather an impossible theory), only to find that this extreme view would not have secured the contract.

"The explanation of this extraordinary position can only mean one thing, viz., absolute ignorance of what is really the life's blood of the industry—estimating. For this reason, and in the hope that the light of knowledge may lift the industry more in keeping with its dignity and importance, one is grateful that the Institute of Builders is fostering technical education to its utmost."

NEW BUILDINGS IN LONDON

Downham.—HOUSES.—A further 111 houses are to be erected on the Downham housing estate, Lewisham, for the London County Council. Plans have been approved by the local borough council.

Grove Park.—HOUSES.—The Lewisham Borough Council are to erect 272 houses on the Grove Park housing estate. Mr. W. R. Davidge, F.R.I.B.A., of 5, Victoria-street, S.W.1, is the architect.

Hayes.—EXTENSIONS.—The directors of "His Master's Voice" Gramophone Co., Ltd., have decided to carry out an important scheme of development at their factory at Hayes, Middlesex. The factory will be greatly enlarged—one "shop" alone receiving 60,000 sq. ft. additional floor space. The plans have been prepared by Messrs. Wallis Gilbert & Partners, architects, of 29, Roland-gardens, S.W. 7. No building contract has yet been let.

Highgate.—CLUB HOUSE.—Upon the Highgate golf course a new two-story club house is being built by Messrs. John Willmott & Sons (Hornsey), Ltd., to the design of the architects, Messrs. W. H. Woodroffe & Son, F. & A.R.I.B.A., 5, Bedford-row, W.C. 1. The floors and roof, of steel construction, are being supplied and erected by Messrs. Young & Co., 6, Queen Anne's-gate, Westminster, S.W. 1.

Horniman-gardens.—CONVENIENCES.—Messrs. J. & C. Bowyer, Ltd., builders, have made an application for plans to be passed by the Lewisham Borough Council for the London County Council for construction of conveniences at Horniman-gardens, Lewisham. The plans were approved.

Mile End-road.—REBUILDING.—A sum of £5,000 is to be spent on the rebuilding of the Old Boys' Club, in Mile End-road, E.

Soho-square.—FLATS.—It is reported that the last part of the site of Messrs. Crosse & Blackwell's old factory in Soho-square has been sold to a Yorkshire property owner for between £35,000 and £40,000. A scheme providing for shops, offices and flats is being proposed.

Stratford.—REBUILDING.—A contract has been signed with Messrs. Henry Knight & Son, of Tottenham, N., for the rebuilding of the central front block of Messrs. J. R. Roberts' Stores, Ltd. The facings are to be of Messrs. Carter & Co.'s white ceramic marble, and the bronze arcade windows to this section and the two side wings constituting an arcade 260 ft. long, are by Messrs. Courtney, Pope & Co. The architects for the scheme, costing about £25,000, are Messrs. George Baines & Son, FF.R.I.B.A., of 121, Victoria-street, S.W.1.

Tottenham Court-road.—THEATRE.—A new company is being formed, under the name of the Casino Theatre, Ltd., for the erection of a new theatre on the Meux Brewery site at the corner of Tottenham Court-road and New Oxford-street. Accommodation will be provided for 2,648 persons. Sir Alfred Butt is to be one of the directors of the company.

Upper Thames-street.—REBUILDING.—Messrs. Gunton & Gunton, Finsbury House, Blomfield-street, E.C., are the architects for the rebuilding of a portion of 78, Upper Thames-street, E.C.

Young-street.—REBUILDING.—Messrs. John Barker & Co., Ltd., of Kensington, have received the Kensington Borough Council's permission to rebuild certain premises on the south side of Ball-street, abutting upon that street and Young-street.

HOUSING: DAMP-PROOF COURSES

THE following circular on this subject has been issued by the Scottish Board of Health :

In their circular, dated January 17, 192 the Board drew the attention of the loc authority to the use by some contractors damp-proof courses of inferior quality. Report however, continue to be received by the Boa from their Housing Inspectors to the effe that this practice is still prevalent, mo particularly in the case of houses being erect for sale by private enterprise with the assistan of subsidy from local authorities. It is report that not only is the material used frequently inferior quality but also that it is improper laid. In either case the danger of dam supervening in the houses is very real, an effective remedial measures after a house ha been erected are usually impracticable.

The quality and laying of damp-proof cours are matters to which the Board attach th greatest importance. In order to participate State Subsidy, the materials used must be good quality, such as is ordinarily specified b a local authority in a contract for workin class houses. This in effect requires compliance with the General Specification of the Boar which reads :—"The damp-proof course sha be of pure bitumen sheeting of approve quality and manufacture or other approve material." Having regard to the reports the Board's Inspectors above referred to, th greatest care must be exercised by the loc authority to see that where sheeting is used th core is of canvas, hessian cloth, or other materi of equal quality. Further, where samples ar submitted for the local authority's approva they must take the necessary steps to satisf themselves that only the approved quality being laid.

The method of laying the material is of equa importance and particular attention should b given to the following, viz. :—

(*a*) A damp-proof course must be provided—

(1) below the level of the ground floor jois in all outer walls, partition walls, ar sleeper walls;

(2) on all piers under wooden beams;

(3) under all door standards on the groun floor;

(4) at the ends of wooden joists where th latter abut on concrete floors;

(5) below and at the back of all concrete si in cavity walls and extending not less th three inches beyond each end. The pie below the sills must be turned up an tacked to the back of the wooden sills;

(6) above all ground floor lintels in cavi walls, extending not less than three inch beyond each end and turned up not less th three inches above the inner lintel a properly fixed.

(*b*) In the case of outer walls, the dam proof course must be laid at a level of not l than six inches above the finished surface the outside ground abutting thereon.

(*c*) In solid walls, the damp-proof cou must be of one width for the full thickness the walls and lapped at least three inches all junctions.

(*d*) As the damp-proof course at door op ings and in internal walls may sometimes torn and displaced before the superstructure laid thereon, care should be taken to see th it is properly renewed before being cove over.

The Board have instructed their Inspect to give special attention to the provision damp-proof courses so that State Subsidy n not be paid in respect of any house in wh they find that the materials and workmans are not in accordance with the requireme of the Board as set forth herein. It is for local authority, therefore, if they wish to ens that State Subsidy will not be withheld, take immediate steps to see that these requ ments are fulfilled in all cases.

HOUSING AND BUILDING EXHIBITION EDINBURGH

is Exhibition, the second of its kind held in burgh, was formally opened on Wednesday, 9th inst., by the Right Hon. Alexander nson, the Lord Provost, under the chair- hip of Councillor G. D. Brown, Convener ie Housing Committee. In opening the bition, the Lord Provost said it was organ- in the interests of the building industry architects, builders, engineers, in fact all rned with building would find it full of est. He congratulated Mr. Percy Bentley the success of the Exhibition.

low we give particulars of some of the bits :—

The Stands.

an Ure & Co. (Keppochhill, Glasgow), **s 22–23, Row B.**

ates.—Of particular interest here is a work- nodel of the famous "Ure Back-to-back" . Cast-iron mantelpieces and interior com- ions with hot-water arrangement are also gst the exhibits of this firm, whose Edin- n representative is Mr. A. Ainslie, 44, erby-road, Trinity, Edinburgh.

tish Vacuum Cleaner Co., Ltd. (Parsons n-lane, S.W.6, and 7A, Hope-street, Edin- h), **Stand 32, Row C.**

cuum Cleaners.—This stand is of particular e to works' managers and indeed to all ested in the efficient cleaning of workshops, s or home. Three types of cleaner are on , the "Turbinet," electric cleaner, the ivac" hand cleaner and the "Goblin" non- ric suction sweeper, and demonstrations are ed out continuously, while, by appoint- , demonstrations can be arranged in one's residence.

The Builder," Ltd. (Catherine-street and t-street, Aldwych, W.C.2; branch offices irmingham and Glasgow), **Stand 49, Row C.**

blication and Models.—At this stand there is play of books of interest to the architectural, ding and allied professions, and an exhibition electrically-illuminated models, amongst h are "Old London Bridge," "London's Waterworks," and a "House with Four ooms," which took first prize in *The Builder* of Building Competition. There are also displays of *The Builder*, *Architecture*, and publications issued from *The Builder* e.

e Chalmers-Edina Co. (39, Assembly-street,), **Stand 44, Row C.**

mps.—This firm has an interesting exhibit mps of all species on view, ranging from the "Edina" Colonial Piston Pump, with a ity on 100 ft. head of 600 gallons per hour, e large "Edina" centrifugal pumping set, paraffin engine, which can handle 15,000 s per hour on a 10 ft. head. Of special st to contractors, however, is the "Edina" service pump, electrically driven, of par- r value for the country house. Several of concrete mixers are also displayed.

w, Clark & Co. ("Diamond" Patent r Works, Leyton, E.10), **Stand 68, Row F.**

ension Ladders.—A display invaluable to ntractor is on view at this stand, where ds of Messrs. Drew, Clark & Co.'s ladders, s and scaffolding are to be seen. "Rap- patent scaffolding has been used in the s of Parliament, Home and Foreign , National Gallery, and a score of other tant buildings, where its use has effected t saving of time and expense. There are own the "Diamond" telescope extension s, in which there is absolutely nothing to ong, while they are compact, rigid and .

ells, Congdon & Muir, Ltd. (Ancoats, Man- r, and 10, St. Colme-street, Edinburgh), **35, Row C.**

tric Lifts.—This stand consists of a repre- on of an electric lift as it might appear in trance hall of a public building. This e lift engineers of long experience and are able to supply all requisites for the equipment and maintenance of electric lifts for any purpose. Their exhibit shows a full-size car of a design which contains all the latest improvements including the E.C.M. improved locking device.

The Express Lift Co., Ltd. (71, Waterloo-street, Glasgow), **Stand 29, Row C.**

Lifts.—This is an exhibit of interest to architects, in view of the fact that "Express" lifts have been selected for the new Municipal Buildings, Glasgow. The exhibit is one of Standard (C.4) Driving Gears, in which the over-driven worm is of special grade hammered steel, cut from the solid and case-hardened. The worm wheel is constructed with a "Phosphor Bronze" rim with machine-cut teeth. Also on exhibit is the small Electric Service Lift, suitable for restaurants, hotels and private houses. The method of control is on the push-button system and the lift can be arranged to serve any number of floors, while it will make several hundred journeys at the cost of one B.O.T. unit.

Goodwin, Barsby & Co., Ltd. (St. Margaret's Ironworks, Leicester), **Stand 34, Row C.**

Stonebreaking Machinery.—Several types of stone and concrete breaking machines are on view in this stand, including an "Acme Victor" concrete breaker on travelling wheels, designed for dealing with builder's aggregate. Worthy of note, too, is this firm's No. 1 (¼ yard) "Open Drum" concrete mixer, which is entirely self-contained with hoist, batch measuring and loading hoppers, self-contained power unit, and water tank. This machine also is on travelling wheels.

L. Keizer & Co., Ltd. (Coalfield-lane and Mitchell-street, Leith), **Stand 16, Row B.**

Plywood Walls.—This stand concentrates on the display of the practical application of plywood to interior walls. On exhibition are panelled sections of figured Japanese oak, mahogany, figured Austrian oak, Oregon pine, and alderwood. There are also on view ceiling sections in various designs illustrating the use of plywood as an attractive substitute for plaster as a base for paint or paper work. We understand that while at first cost plywood compares favourably with any other material for wall covering, and that while the erection is no dearer than simple plastering, the ultimate saving by elimination of cost of upkeep and redecoration is assured—a very important saving.

King, Craig & Co., Ltd. (113, Queen Victoria-street, E.C.4), **Stands 17 & 18, Row B.**

Hardwood Doors and Porcelain Ware.—This firm has an illustrative display of well-made hardwood doors suitable for all types of purpose on view at their stands, where there are also on view a good selection of their baths, closets, tile surrounds, mantels, &c.

R. H. Kirk & Co. (St. Peter's, Newcastle-on-Tyne), **Stand 28, Row B.**

Concrete Machinery.—There is on view at this stand the "Kirk" patent block-maker, for which it is claimed that all artificial stone and concrete blocks required on a building from foundation to chimney cornice can be made. This particular machine, together with another exhibit, the "Champion" patent slab and block maker, was used on the Lochend, Craiglockhart, Prestonpans and Gorgie housing schemes.

Liner Concrete Machinery Co. (Glasshouse Bridge, City-road, Newcastle-on-Tyne, **Stands 12 & 13, Row A.**

Concrete Machinery.—This firm's "A" type "Liner" Patent Concrete stone-moulding machine and mechanical stacker, shown on their stands, is claimed to be the only double-unit moulding machine on the market that makes and stacks mechanically cast stone. The following claims are made for the machine: Firstly, it has a moulding-box of steel which ensures perfectly true stones; next, it makes a large variety of finished stones rock-faced or plain, building blocks, partition slabs, steps, sills, mullions, &c., while the moulding-box is adjustable so as to bond with ⅜ in. joints when necessary. On view at the stands are also several other type of "Liner" apparatus, including the patent slab, block and brick machine, stocked in three standard sizes; the face-down block-making machine, in which, as the name implies, the blocks are made face down, enabling a fine close face to be obtained; while besides these are a number of other concrete making and forming machines which deserve close inspection.

Scaffolding (Great Britain), Ltd. (Lansdowne-road, S.W.8), **Stand 27, Row B.**

Scaffolding.—This stand will be of interest to builders and contractors for there are given daily demonstrations of the use of tubular scaffolding, which comprises patent sprocketed steel tubes, reinforced putlogs (which eliminate putlog holes), suspended scaffolding, and "Scaffixer" scaffold ties. There are also demonstrations of the use of "Conforms" or patent adjustable stanchion plates which centre a column or pilaster to any dimension in a few seconds.

A. Stevenson & Co. (Bonnington Welded Boiler Works, 60–62, Newhaven-road, Leith), **Stand 21, Row B.**

Central Heating.—In view of the popularity of the central heating system of warming, this stand is of the very highest value to the contractor or architect. On view here are "Weldun" welded boilers of a type suitable for domestic engineering and of kinds to accommodate all fuels, and also various designs of range and grate boilers suitable for housing schemes and general requirements.

Standard Metal Window Co. (West Bromwich), **Row C.**

Metal Windows.—In this row are shown several of the productions of this firm, who specialise in leaded light casements, roof lights and standard cottage casements. Yet another development is their steel-partitioning for offices, factories, classrooms, &c.

Winget (1924), Ltd. (Winget House, Grosvenor-gardens, S.W.1), **Stand 36, Row C.**

Concrete Mixers.—A machine for which it is claimed that "a perfect mix is guaranteeed"—the "Winget" open drum concrete mixer—is the principal exhibit on this stand, a machine which is fitted with a semi-helix bottom construction of the Burn-Lancaster mixing drum. An output of 60–70 cubic yards per eight-hour day is claimed for this machine, whose claims are backed up by an offer from the makers of seven days' free trial before purchase, if desired. There are also on view several types of "Winget" slab and block making machines and stone-breaking and granulating machines, whose long list of successes on public contracts speak for themselves.

Yorkshire Copper Works, Ltd. (Leeds) (Scottish representatives, Round & Robertson, Ltd., 16, North St. Andrew-street, Edinburgh; P. M. Martin, 78, M'Alpine-street, Glasgow, and Elliot Paisley, 20, St. Andrew-street, Dundee), **Stand 37, Row C.**

Copper Tubing.—Copper tubes for hot and cold water service pipes have many advantages, amongst which may be numbered a low initial cost, a sound and reliable installation, and no burst pipes. "Yorkshire" light-gauge housing tubes have secured many contracts for housing schemes, hospitals, and other public institutions, which speaks well of the high quality of their material and finish. These "Yorkshire" tubes are produced in a manner which makes them particularly suitable for use with all types of compression joints. It is claimed that they can be bent, drifted, or flanged without annealing, thus ensuring a quick reliable job with minimum labour costs. These tubes are manufactured in all sizes from .005 in. inside diameter to 24 in.

Building Trade Wages.

The Minutes of Proceedings at the Statutory Meeting of the National Joint Council for the Building Industry have now been made public. They contain the report of the Grading Commission whose recommendations were published in our issue for January 21.

RATES OF WAGES IN THE BUILDING TRADE

Every endeavour is made to ensure accuracy, but we cannot be responsible for errors.

Plans for Leeds Improvements.

The Leeds Corporation Improvements Committee estimate their expenditure on capital account during the ensuing year at £1,008,400 on street improvements, £600,000 on development and housing, and £25,500 on housing assisted schemes. One of the latest proposals of the Committee is to purchase 975 square yards of land, with the synagogue and other buildings thereon, in Merrion-street, and required for street improvement purposes, for £15,500. The Committee have also decided, subject to the approval of the City Council, to purchase 1,881 square yards of land, with the buildings thereon, in Woodhouse-lane, Wormald-row, and Guildford-street, for £39,250. The site is required in connection with the widening of the street between Victoria-square and Vicar-lane.

Bristol Plumbers' Dinner.

The annual dinner of the Bristol Master Plumbers' Association was held on February 11 at the St. Stephen's Restaurant, Bristol, with Mr. A. J. Vaughan (the President) in the chair.

In responding to the toast of "Our Civic Rulers," Mr. J. L. Brown (Chairman of the Bristol Health Committee) referred to the importance of the plumber in ensuring healthy dwellings, and the necessity of competent workmen, of which there was at present a lack. The great bugbear of to-day was the shoddy work put into buildings.

Professor Andrew Robertson (Dean of the Faculty of Engineering of the Bristol University), responding to the toast of the "Merchant Venturers' Technical College," said he understood that some of the qualifications required by the Health Committee for the appointment of inspector were not such as an ordinary plumber could be expected to have. The people of this country had not taken technical education as seriously as they should. There had been a decay in the apprenticeship system, and he believed that sooner rather than later employers and employed would have to think furiously on the question of the proper training of young men, which required thorough investigation and revision.

Mr. O. C. Parfitt, Hon. Secretary, said the Association was gaining strength; it had now reached a stable position; and they hoped the Registration Bill would pass through Parliament, as it would put the craft on a higher plane. They worked harmoniously with the public bodies; their aim was the bettering of the craft of plumbing and its workmanship.

PRICES CURRENT OF MATERIALS

Owing to the exceptional circumstances which prevail at the present time, prices of materials should be confirmed by inquiry.—Ed

regret to announce that the death has d at Sydney, N.S.W., of Mr. Alfred son, the general manager of this firm's ian business.

THE SCOTTISH BUILDER

NEW BUILDINGS IN SCOTLAND

Aberdeen.—ROAD.—A remit has been made to the Finance Committee of the Town Council to consider the desirability of having a general conference with the Town Council and County Council with reference to the proposed new mid-Scotland road from Linn o' Dee, Braemar, through Glenfeshie to Kingussie.—Plans passed: Two blocks of lock-up garages in Viewfield-road, for Alex. Thomson; laundry and dye-works, Holburn-street, for Mr. Wm. Borthwick; six houses, Forbesfield-road, for Mr. J. Clark; three bungalows, Angusfield-avenue, for Mr. T. S. Sutherland.

Edinburgh.—VARIOUS.—Plans passed for eight lock-up garages at 3, Muriston-lane, for Mr. J. Kettle.

Elgin.—RENOVATION.—The Moray Education Authority has approved the scheme for the Elgin Girls' Technical School to be renovated at an estimated cost of £1,767.

Glasgow.—HOUSING.—The Housing Sub-Committee on Insanitary Areas has approved a scheme for the demolition of 1,064 dwellings.—The Housing Committee has agreed to recommend the construction of the roads and sewers at Knightswood No. 8 housing scheme to be carried out by the Housing Department. This proposal represents an expenditure of about £17,000.—Plans passed: Hall, Charles-street, Bridgton, for Mr. Wm. B. Booth; pavilion, Bardowie-street, Possilpark, for the Wester Keppoch Tennis Club; six houses, Percy-street, Maryhill, for the Territorial Army and Air Force Association of Glasgow.

Hamilton.—HOUSING.—With the approval of the Scottish Board of Health offers are being invited for the demolition of sections of Castle-street, and the building of new blocks of houses. The scheme provides for 160 new houses to be built in School-street area. In connection with other housing schemes in the burgh, the Board has approved plans for 66 houses at Newfield and Linnhouse, and 14 houses at "The Yews."

Troon.—HALL.—The Dean of Guild Court has passed plans of a new hall at St. Ninian's Episcopal Church, Bentinck-drive, at an estimated cost of £3,200.

All-Electric Houses, Glasgow.

Two demonstration all-electric houses, situated at 15, Dinmont-road, Shawlands, have been opened at Glasgow for the inspection of the public, and will remain open during the next fortnight. These houses are situated in what is known as Crossmyloof housing scheme, consisting of 280 houses, erected for the Corporation of Glasgow. They are of a novel type of construction, there being provision for only one coal fire in each house. There is no fixed fireplace, except in the living room, heating being done by means of electric fires, which are provided as part of the house equipment, together with electric cooker and electric wash-boiler. It is claimed that property of this description can be erected and equipped as cheaply as the older-fashioned dwellings.

Edinburgh Town Planning.

The Town Clerk and the Burgh Engineer have been instructed by the Housing and Town-Planning Committee of Edinburgh Town Council to proceed with the Craigentinney scheme. Mr. W. A. Macartney, the Burgh Engineer, in a report, suggested that in making a fresh start with town planning, they should push on and finish this scheme, in which he did not anticipate many difficulties. The Corstorphine area of approximately 8,000 acres seemed to be ready for a scheme, and the Colenton and Craiglockhart area of about 5,000 acres was a good second. Summarising, Mr. Macartney suggested that the Craigentinney scheme should be first dealt with, the Corstorphine area next, and that the area for a regional scheme should be defined and steps taken to call interested local authorities together.

BUILDING TRADE WAGES IN SCOTLAND.*

THE following are the present rates of wages in the building trade in the principal towns of Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur:—

	Masons.	Bricklayers.	Carpenters, Joiners.	Plasterers.	Slaters.	Plumbers.	Painters.	Labourers—Masons', Bricklayers', Plasterers'.

. CXXXII.—No. 4386. FEBRUARY 25, 1927

OFFICIAL VANDALISM

ROM time to time those of us who care for the æsthetic decencies of life receive a profound shock by the inexplicable vagaries of those who should be the natural guardians of our civic amenities. These vagaries are probably a relic of the awful days of ntrolled industrialism which so darkened the middle years e nineteenth century, when anything was considered l and expedient if it could only bear the label "practical." he most part a kind of practicality that burnt down houses ast pigs! The more enlightened of our provincial cities, as Liverpool and Birmingham, have of late become so s of their civic beauties that a menacing growl arises the least of these beauties is threatened, a growl sufficiently ive for the most part to restrain the intending marauder. omparison London would appear, despite the watchful ties of the London Society, to be less happily situated. town she is so vast, so uncontrollable, that some of her , and many of her minor, beauties are despoiled before ublic is aware of what is going on.

f the major pieces of vandalism, some perpetrated by e persons and others by public authorities, we need call to our readers' minds the demolition of old Regent- by a Government department, and the building over of eigh Gardens and Mornington Crescent by private erprise." Of the threatened acts of vandalism on the scale by public authorities, which so far have been happily ed, is the attack on Waterloo Bridge by the London y Council, and the threat to build an electric power n on one of the most beautiful reaches of the Thames; e-scale attack by private people, at the moment suspended, n no wise defeated, is the attempt on the Foundling tal site. It may be said in extenuation that all these l, or would-be, vandals plead in their excuse, though for nost part not very convincingly when set against the claims of the community, public urgency and convenience. is, however, with the smaller acts of civic incivility that e now concerned. Elsewhere we print a letter from a pondent calling attention to what would appear to be a ularly unnecessary, or as some may think, stupid piece ndalism at Hampstead on the part of the officials of the politan Asylums Board. A group of very beautiful trees been ruthlessly cut down to one general level, regardless, understand, of age, condition, or situation; a proceeding savours of the lowest type of Prussian drill sergeant, is passion for unintelligent uniformity, rather than of an tened English official. It is not our object to attack, r have we any sympathy with those who want to attack, e mere sake of attacking, the servants of our local and authorities. For the most part they are a conscientious, ous and intelligent body of men, who do in the course eir lives render great service to the public. We can t and appreciate them, but in the matter of trees they not a good record. It may be due to the fact that the ls of the big cities, and particularly London, are too ised, too far removed from rural realities properly to iate and understand what is necessary to the proper tion and conservation of trees.

e wonder what would be said by any of our county land- s whose agents, in the supposed interest of arboriculture, wn all the trees on their employers' estates to one dull onous level, and we fail to see why the public should be served than a private individual. If public bodies t number amongst their officials anyone who has some edge of the proper care and treatment of trees, then nsider that the sooner such persons are employed the . We instance this incident at Hampstead because it is l and immediate. The inhabitants of St. John's Wood emember a similar case last autumn, when the trees in field-road were similarly attacked and deformed to a vel of tortured trunks having the appearance of badly l mop-sticks. This act of mutilation was carried out at structions of the Marylebone Town Council and aroused gry opposition of most of the dwellers in the "Road" as many others who lived in the neighbourhood. In spite of petitions, protests, interviews, the work went on, each tree being measured by a piece of string from the pavement in order that the tree-feller could ascertain whether he had sufficiently followed his instructions and made all the tree trunks exactly level.

But if the petitioners in this particular instance found it was "Love's labour lost," their protestations seem not to have been without a certain amount of result. If in the treatment of the trees in Springfield-road the Marylebone Council showed the least intelligence, they may be said to have shown the greatest intelligence in the way they have more recently dealt with the trees along Hamilton-terrace. Here it is evident that every tree has been considered on its merits as to condition, size, structure and position; only the absolutely necessary amount of lopping has been permitted, and the result is a great credit to the Council. But, if the Marylebone Council displayed a low degree of intelligence over the trees in Springfield-road and a high degree of intelligence in the way they have dealt with the trees in Hamilton-terrace, can it be said that the Metropolitan Asylums Board have shown any intelligence at all over the trees in Pond-street, Hampstead?

St. John's Wood and Hampstead are, with Chelsea, the nerve centres of artistic London, and to complete the trilogy of woe, there was a letter in last Saturday's *Times* protesting against the proposal to build over the vacant site of the Duke of York's Schools at Chelsea. In this case it is the Government that is the aggressor, and, as Mr. Blunt so truly says: "Quis custodiet ipsos custodes"? If, as we say, these depredations can take place in the artistic centres of London, where there is presumably an active and intelligent public eager to protect the amenities of their neighbourhoods, what chance have the other and more remote parts of London against the hand of the aggressor?

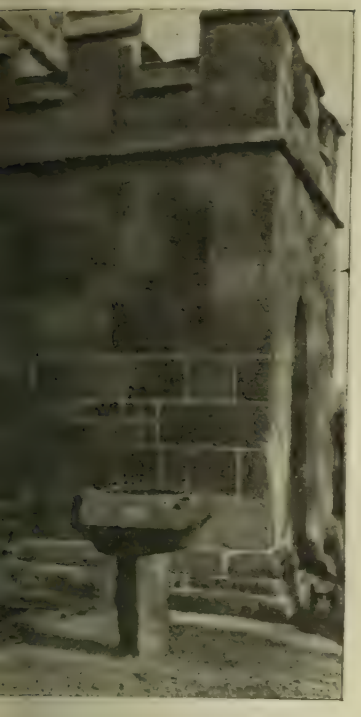
Where there is a threat to buildings or open spaces, there is usually time to organise a protest. Usually some details of the proposed schemes leak out before even the first brick is laid, and there is ample opportunity to arouse public opinion. The whole question can be properly ventilated, and there is not the same urgency for instant action as in the case of any threat to trees. A group of beautiful trees may have taken a lifetime to grow, or even the duration of many lives, and they can be cut down or mutilated beyond repair in a few short hours. For those who love trees there is something very sad in this thought. The loveliest and most beautiful of trees are liable to instant and irremediable damage at the behest of any ignorant official, who will tell you with an air of bland indifference, "that only what is necessary is being performed." The tragic absurdity of such a contention can only be fully appreciated by those who dwell in the immediate neighbourhood of the place that has been ravaged, the daily victims of a lamentable decision. Protest as eagerly as you will, the chances are that you will be too late, and even whilst you are making your protests the boughs and trunks will come down.

The damage has been done, and those who are tree-lovers can only weep for the beauty of what was, and fiercely register a vow that no future apathy on their part shall contribute to similar disasters in the future. Publicity is the only weapon. If the public sufficiently care, even the most case-hardened of bureaucrats will hesitate before he sets out to flout it. We all know that dangerous trees must be sacrificed—however beautiful they be, we cannot endanger the public safety by a false or weak sentimentality; however much we may regret them and mourn them when they are gone, if they are dangerous then go they must. They require constant care and attention, but let it be loving care and attention, and then we need not fear the result. It is a melancholy thought that, while through the enlightened efforts of those who care for the beauties of our towns, there has recently been added to the Town Planning Act a clause which allows of beautiful and historic trees being scheduled for preservation, and protects such trees from all damage except in so far as they become dangerous (a clause which is largely aimed at the private owner); the trees' most ruthless enemies are frequently the public guardians, who should be amongst the first to protect them.

NOTES

The Architect, the Builder and the Public. WE quite see the point made by a correspondent who has written to us in regard to our article and note on the relations between architects, builders and the public. But he cannot suggest how the smaller of our county and rural councils and the public can be made to realise that competence in design is worth paying for and may cause an actual saving over the cheese-paring and ill-timed policy of eliminating the architect and getting everything done at the cheapest possible first cost. He refers to the copying of cottage designs which were right for the sites on which they were built, but all wrong for the sites on which the copied designs have been built. We agree that many buildings besides cottages are needed and are built by small local authorities on the parsimonious principle of avoiding professional fees and accepting the lowest tenders that can be got. But we do not see how a better policy is to be adopted until men of greater intelligence and with a wider and more generous outlook on life can be attracted to sit on our councils.

A Survey of Greater London. A CORRESPONDENT writes:—"The London County Council is certainly trying to carry out a Survey of Greater London on the cheap. The decision of the L.C.C. to limit the expenditure of the joint committee that will prepare a possible scheme for London to £3,000 for three years is ludicrously inadequate as compared with the amount of money available for zoning and planning in New York and other American cities. Manchester, in the preparation of their admirable outline regional plan, expended for two years the produce of a rate of 1-10th of a penny in the pound. The 154 local authorities from Greater London who were present at the conference last December addressed by Mr. Neville Chamberlain were apparently ready to approve of the expenditure of the produce of a rate of 1-20th of a penny. This would have been about £16,000 a year. But the Finance Committee of the L.C.C. apparently considers it to be extravagant to allocate such a sum to the development of London, and has cut down the amount to £3,000. This meagre sum is to be eked out by the Ministries of Health and Transport providing the necessary clerical assistance, and the technical advisers of the constituent authorities will have to give time and work. In view of this extremely economical policy it is very probable that no outside experts will be employed."



Building in France. FROM the point of view of the building industry, one of the most interesting passages in the Report just issued on the Economic and Industrial Conditions in France, by Mr. J. R. Cahill, Commercial Counsellor of H.M. Embassy, Paris, indicates that capital has been attracted to building in France partly as a consequence of the repeal of certain rent restrictions. At the present time the building of blocks of dwellings by private enterprise is not brisk in France, and the tendency, as in Great Britain, is to build for immediate sale and not for letting. The Report continues: "The old practice of individuals of placing their capital in the erection of a single building with flats has passed away simply because few individuals are able to find the capital necessary for such an undertaking; and new building is mainly done by groups of capitalists. Capital has been more attracted in the last two years to this form of investment, both because of the suppression of most of the rent or notice-to-quit restrictions and of the falling value of the franc, which led so many persons to purchase to an excessive degree physical things of all kinds. In Paris the building of one form of dwelling has been and is being carried on at a remarkable rate—namely, the building or enlargement of hotels. Much office and shop construction is also being carried out and much building of modern blocks of offices. Outside Paris, both in its suburbs and in several provincial towns, a very considerable volume of new building of dwellings is reported, especially the building of small houses on the outskirts of towns. This is due partly to the increase in population in these towns, partly to the movement towards suburban residence, partly to investment and currency reasons, partly to housing activity by large employers. Along the Riviera and the Bay of Biscay as well as in many places along the Channel, building has been very active."

The Cinderella of Industry. WE give in this issue a well-informed letter from a well-known contractor developing a subject raised last week in a letter headed "The Cinderella of Industry." It is clear from this correspondence that very low and injudicious estimating, to say the least of it, is not in common practice. We are glad to hear that our correspondent suggests that the Institute of Builders should seriously deal with the question.

The Foundling Hospital. THE withdrawal of the Foundling Hospital from should be an encouragement to those who endeavour to create a strong public opinion for the safeguarding and development of the amenities of our cities and towns. It surely cannot be right that the profits arising from the improvement and development of our towns should, all or most of it, go into the pockets of private owners and building speculators. In some towns, as Birmingham, for instance, it is now realised that the town itself should have a fair share of increment values.

Destruction of Trees and Hedges. THERE is another case of further disfigurement against which no sufficient steps have been taken. We need not travel outside Middlesex to witness the injury to our country roads by the ruthless cutting down of trees and hedges, and other mutilations. We recall one elm-bordered road whose lovely summer canopy and chequered shade was a delight to all. Now this same road

Milton Chantry, Gravesend.

THE Gravesend Borough Library and the Gravesend and District Scientific and Archæological Society are appealing for funds towards the reconstruction of Milton Chantry (illustrated on p. 310)—a fine example of fourteenth-century work—for the purpose of establishing a museum and library of local history. The Chantry building is not only the oldest building in Gravesend, but it is one of the most picturesque in the district. Much of the original timber in the roof is still standing, and the walls, mostly 3 ft. thick, built of flint and chalk, have been preserved by a brick casing, erected in Jacobean or Elizabethan times. It belongs to a most interesting period, and, if not actually the work of the Monks of Cluny, is much like it in appearance. Subscriptions towards the preservation of this fine old building should be sent to Mr. Alex. J. Philip, Librarian, Public Library, Gravesend, Kent.

An Old Stone Font.

THE history during the nineteenth century of this old font at South Tawton Church, Devonshire, affords an illustration of the evil which can be wrought by thoughtless benefactors. As can be seen from the photograph, the bowl of the font dates from a very early period. When the church was restored a would-be benefactor offered to present a modern font in place of this ancient one. The offer was accepted, and the old font found a resting-place in the vicarage garden. When rescued by the late vicar the original base had disappeared altogether. The bowl has now been set up in the churchyard near the south porch of the church upon a stone column, which is hardly in keeping with its dignity. It is hoped that later on it may be restored to its place within the church.

"Architecture."

A FURTHER and very welcome contribution upon the subject of Architectural Criticism will be found in the February *Architecture*, in which the question of Invitations and Privileges is dealt with. Miss V. M. Christy continues her "Reflections on Architecture," while Mr. W. W. Wood goes on his way "Through the Fens and Marshes." We also commend to the reader's notice the first of a series of dissertations upon "The Bridges of the Upper Thames," fully illustrated by the author, Mr. Alwyn R. Dent. The month's illustrations also include a number of reproductions of the beautiful ironwork of Edgar Brandt and others, shown at the Paris Exhibition last year and dealt with in Mr. Stanley Hamp's recent lecture on French Ironwork at the Design and Industries Association.

From a Drawing by Mr. T. Wilson.

The last of Old St. Stephen's, after the Fire, 1834. (*See* p. 314.)

GENERAL NEWS

Professional Announcement.

Mr. W. Melville, of Burnley, has been appointed chief surveyor of Fleetwood.

Exhibition of Sculpture.

An exhibition of sculpture by Carl Milles, Professor at the Royal Art Academy, Stockholm, will be on view at the National Gallery, Millbank (Tate Gallery), from February 25 to April 18.

Seven Sisters Cliffs Saved.

The famous Sussex beauty spot, the Seven Sisters cliffs, and the downs behind, have been saved for the National Trust, so it is stated, by Mr. W. C. Campbell, of Eastbourne, who has lent the remaining £5,000 of the £18,000 required to buy the land from the building syndicate.

Surveyor's Estate.

Henry Percy Boulnois, of 34, Evelyn-mansions, London, S.W., City Surveyor of Exeter, 1874–1883, Borough Engineer of Portsmouth, 1883–1890, City Engineer of Liverpool, 1890–1897, and afterwards Inspector under the Local Government Board, left estate of the gross value of £4,876, with net personalty £4,599.

Foundling Site.

The plan to remove Covent Garden Market to the Foundling Hospital site in Bloomsbury has been abandoned. At a special meeting of Beechams Estates & Pills, Ltd., the owners of the market, it was announced by Mr. Edmund Spyer, the chairman, that, owing to the strenuous opposition that had been offered to it, the directors had decided to withdraw the Bill which sought to authorise the removal of the market to Bloomsbury.

Disfiguring Advertisements Prohibited.

Kent County Council have, at the request of many of the inhabitants, accepted new by-laws which prohibit the use of any advertisement which disfigures or injuriously affects the amenities of public parks or pleasure promenades, which disfigures the view of rural scenery from a highway or railway, or from any public place or village, or which disfigures the amenities of any historic or public buildings or monument.

A View over Derwent Water.

It is understood that negotiations have reached a successful issue whereby the land on the west side of the Borrowdale-road, from Peterfield to the entrance to Stable Hills Farm, will be saved from all possibility of being built on, and the uninterrupted view over Derwent Water into the famous "jaws" of Borrowdale and across to Cat Bells will be preserved intact for all time.

Type Faces.

The Municipal College of Technology, Manchester, has recently published from the press of the College (1s. 3d. net, post free) an attractive volume on "Type Faces," being a series of alphabets for the use of students in design for typography. Most architects are interested in fine lettering, and the alphabets and figures represent the best of their kind in use to-day. Some historical details have been added where possible, which give additional interest to a volume of great architectural interest.

Sir John Soane's Fund.

The trustees of Sir John Soane's Fund will hold their annual meeting on Wednesday, March 9, at 13, Lincoln's Inn-fields, W.C., to distribute the interest (about £150) accrued during the year on the principal sum given by Sir John Soane as an anniversary gift for the relief of distressed architects, widows and children of deceased architects in distress. Forms of application are to be obtained at the Museum, and must be filled in and delivered there on or before March 1, after which no application can be received.

Wellington, N.Z., War Memorial.

Holding that the present site outside the south-eastern angle of the Parliamentary grounds is distinctly unsuitable for the memorial proposed to be erected by the Wellington Citizens' War Memorial Committee, Mr. Hurst Seager, C.B.E., F.R.I.B.A., in a report he prepared at the request of the Government, has recommended the adoption of a big combined scheme of commemoration, with the magnificent Mount Cook ground as the chosen site. Mr. Seager's proposals provide for the erection of the citizens' monument as an independent memorial in front of the group of buildings which could be formed by the construction on that site of the new Dominion Museum, the new Art Gallery, the National war memorial in the shape of a Hall of Memories, and the incorporated Carillon.

Balvenie Castle.

Balvenie Castle, Banffshire, was the subject of a lecture delivered by Dr. W. Douglas Simpson, M.A., F.S.A., to members of the Aberdeen Natural History and Antiquarian Society at Marischal College. The lecturer said that Balvenie Castle, an important stronghold, occupied a commanding position on the left bank of the river Fiddich, about half a mile north of Dufftown. It was a ruin of high architectural merit and interest, showing work belonging apparently to the three chief periods of secular construction in Scotland—the thirteenth, the fifteenth, and the later sixteenth centuries. The special value attaching to this succession of styles was that the different additions in this case were not the result of repairs after violence, but of the orderly development of the castle fabric to suit advancing social conditions.

Old Chelsea.

The efforts of certain lovers of Old Chelsea to prevent the demolition of Lombard-terrace have met with failure, says the *Times*. It will be remembered that a petition for preservation was signed by many well-known Chelsea residents and sent to Major Sloane Stanley. The reply lately received on Major Stanley's behalf holds out no hope that the terrace can escape demolition. The scheme provides for the widening of the road on the west side of Church-street by 15 ft., and this much-needed improvement will allow of a clearer view from the west of the church and its familiar tower. The new buildings which are to take the place of the old will be in early eighteenth-century style, and, with the mellowing influence of a few years, will be brought into harmony with their more ancient surroundings.

The disappointment of the petitioners and their inability to agree with the arguments of Major Stanley and his representatives have been expressed in a letter of comment on the scheme from Mr. Blunt.

Form of Agreement between Engineer and Client.

The Institution of Structural Engineers has now produced a form of contract between the consulting structural engineer on the one hand and the client on the other. There are two distinct forms, one for use where a Bill in Parliament for the works to be executed is necessary (Form "B"), and one where a Bill is not contemplated (Form "A"). Each document is accompanied by a printed explanatory form, which details the procedure to be followed clearly and lucidly, and each sets out explicitly the work to be done by the engineer and his responsibility, the method and times of payment of his fees, and contains provision for payment in the event of extra work being carried out, or in the event of the works being abandoned. The documents were drawn up by the Practice Committee of the Institution, in conjunction with the Institution solicitors, and has been approved by counsel. Each form is on sale, price one shilling, and may be obtained from the Secretary, the Institution of Structural Engineers, 19, Upper Belgrave-street, S.W. 1.

Wren and the City Churches.

The service in commemoration of Sir Christopher Wren, which has been held annually at the church of St. Nicholas Cole Abbey, E.C., since the bi-centenary of the architect's death, took place last Sunday evening, was also made the occasion for a special tha giving for the preservation of the City churc The recter, the Rev. W. C. Piercy, in his serr recalled the "contemptuous rejection" year of the measure which, he said, would brought destruction to certain of the churches, and urged that, now those chur were saved, they must be used. He spok Wren particularly as a Christian architect, mentioned his care for his workmen; his for audibility in his churches; his care the poor; his care for teaching by the eye patience under ill-treatment; and his car his own soul's welfare. We should try to from Wren's example as we admired his a tecture, his wisdom, and his ingenuity, for we admired was based on character. Wren a possession, not only as an architect, bu a man.

Lewisham Open Spaces.

The Ministry of Health public inquiry in nection with the South-East London t planning scheme of the London County Co was opened at Lewisham Town Hall by Mr. Eyles, an inspector of the Ministry. The posals cover an area of over 7,000 acres i boroughs of Woolwich, Greenwich and Lewis and provide for the substantial enlargeme public open spaces and the retention in a developed state of privately-owned grounds.

Mr. Harold Swann, Chairman of the S Town-Planning Committee of the L County Council, said the County Counc garded the enlargement of the public open and the retention of ground held by clubs as being of paramount importance. not too much to say that there was a eryin for private sports grounds in South London.

Mr. Frank Hunt, the London County C valuer, stated that between thirty and acres on the Bromley side of the Dow estate would be left available for playing for some of the Council's own educa institutions, some of it might be used f recreation of tenants, and some would be available for cultivation in small plots.

COMPETITION NE

Lexden Council School Competition

The following notice has been issu the Royal Institute of British Arch "Members of the Royal Institute of Architects must not take part in the competition because the conditions are accordance with the published Regu of the Royal Institute for Architectura petitions."

Bradford Municipal Improvements

It is understood, with regard to the development of Bradford, that the Cor Street Improvements and Buildings Co will consider, at a meeting in a week a proposal to promote a competition architects for the best plans for the la the whole of the area and the constru new buildings. The official suggestio understood, provide for the constru three or four new thoroughfares—the one between Town Hall-square and square, running parallel with Mark No public buildings, such as a concert stated to be included in these official

School at Lytham St. Anne's.

The Governors of the Lytham Charit architects who have had experience in t and erection of schools and are willing t designs in competition for a Girls' S School at Lytham St. Anne's, to send names to Messrs. Wilson, Wright, Earle, 54, Moseley-street, Manche March 12th. From the names subm selection of about twelve architects wil to whom invitations will be issued.

J. Alan Slater, M.A., F.R.I.B.A. lent), occupied the chair at a meeting Architectural Association held at 35, d-square, W.C.2, on Monday evening.

New Members.

the minutes of the previous meeting en confirmed, it was announced that were seven nominations for membership, following new members were elected:—

Barnard.	K. H. McConnel.
irst.	B. Ionides.
Franklin.	C. W. Neil.
M. Raemaekers.	

AMERICAN ARCHITECTURE.

Howard Robertson then gave a lantern on "Architecture in America." To t to understand American architecture, l, one must know the country and the an mode of life. North America was t that it allowed for every sort of c condition, and that vastness, coupled he mixture of races, had compelled a cer- andardisation in the production of the als of existence, including buildings, the same time climate made for local on in the architectural expression. ty production had given to American cture a particular character. There was ime for individual personal touches, and effort was directed towards the rapid and erection of large buildings, the de- f which were often of a standardised

remarkable characteristic of modern an architecture, which had developed in t fifty years, was the generally high n both domestic and public buildings, ldness with which technical problems olved, and the failure of the architec- etail to keep pace with the fine simple which characterised much of the work. The large scale of American gs was of assistance to the designer, h their big masses it was almost im- to fail to be impressive, despite poor monplace detail.

ican domestic work was a most interest- d, but except in the important matter fort and equipment we had little to The most noteworthy contribution of to modern architecture had been in tion of her own particular problems— s for commerce, for transportation, for y. The problems of every American e different, but they all had one factor on, the congestion in the business and e residential quarters, with the result skyscraper was introduced as a pallia- Therefore the skyscraper, though speci- ociated with New York, was a national r liability.

ican commercial buildings, banks, warehouses, were efficiently, even sly, designed as a setting for this occupation. Money largely replaced cy, hence the magnificence of business premises. The banks were temples, as they were beginning to be in this country. Transportation had called into being magnificent terminal stations for the railroads, and these would soon be followed by the development of road and garage service for automobiles. The American garages were ahead of any in Europe.

But the greatest American contribution to the architecture of the home was the apartment house and apartment hotel. They were the normal outcome of the American mode of living. The new hotels were always full, and by the time they had lost popularity they could be pulled down, for the investment life of one of these buildings did not exceed eight to ten years.

Zoning had produced fine silhouettes, and American tall buildings were becoming modern in expression, but lower buildings retained a Classic flavour. The detail of most American buildings was well placed and in good scale, but it was very dull and trite, being nearly always borrowed direct from some European source. There was very little use of colour, and the streets were more drab than those of London, due to the neutral tones of brick and the lack of strong colour accents. Interiors were generally based on Spanish, Italian, or French tradition, sometimes English or German. They were often the work of professional decorators, well executed, but lifeless and without character. Interiors of banks, hotels, restaurants, theatres, all resembled one another. Modern decoration was just beginning to be acceptable, but was naturally opposed by the decorators who sold antiques. Gothic architecture was in favour for churches, schools, and suburban apartment houses. The American commercial use of Gothic, with a few exceptions, resulted in the creation of a permanent distaste for anything mediæval!

It would be a great mistake to base our architecture on American models, any more than on that of any European country. America's achievement was the solution of her own problems, but she had borrowed largely from Europe in so doing; we must not attempt to borrow back her borrowings.

We could learn from America the better organisation of the builders' and the architects' businesses, the mechanical equipment and perfection of all services, and the power and will to do things in a large way. In England we were apt to be petty; even our war memorials had sometimes to tell the hour. We could learn from Americans a broader habit of mind, but we must work out for ourselves our national architectural expression.

Discussion.

A vote of thanks was proposed by Mr. Alfred Bossom (of New York), who said America was not perfect, and American architects knew that better than anyone. During the past twenty years three styles of architecture had followed each other in commercial work, such as skyscrapers: First the design of these buildings was crude Classic; then came buildings of the type of the Cunard Building; and these were followed by the simpler work to be seen in the latest buildings. American architecture would not in all cases be suitable to England. Perhaps it was not particularly suitable to America or anywhere else. The Americans knew it was not satisfactory, and they were learning to do better. A style of architecture could not be built up in thirty years. In America time was considered to be of great value, and that lost time meant lost money. The problem of a large number of high buildings being built close together was solving itself, and the practice now was not to build more than one very high building per block, which meant that they were spaced about 200 ft. apart. The reason so much of the detail was copied was due to the fact that the owner wanted the building in a hurry in order to get a return on his money as soon as possible. The architect was not allowed to spend any time, and the detail was copied because it was not unusual for a twenty-story building to be carried from the sketch stage to complete working drawings within from five weeks to two months. And the work suffered in consequence. The architects were trying to induce the owners to give more time.

Mr. Lionel Pearson, in seconding the vote, said one of the things that struck him in New York was that although vertically there was wild disorder, yet horizontally it was very simple. The plan of the American city was nearly always the grid-iron. The plots were nearly all the same size. The result was that there was a greater simplicity than in this country. They had dropped the cornice, and a lot of other nonsense as well. They did not attempt to surround windows with architraves, because when they got a thousand windows in one building it would be foolish to put architraves to them all. The mere fact that they worked on such a huge scale had made American architects shed a lot of conventional things that English architects found it difficult to get rid of. He thought the advent of the zoning law was a sign that Americans thought the skyscraper rather a mistake, although the Americans seemed to have a craving for height; in places where there was plenty of room to spread they often preferred to go up. In regard to detail, he saw a great deal that gave him pleasure, such as the work of Platt, Pope, and Harman; it might not be very original, but it was in good taste and refined.

Mr. T. S. Tait said many American interiors were full of good taste and inspiration. However much they might not like in American design, they must admire the organisation of building work. The architect's job was to build a building; he should make it beautiful if he had time; and the way they carried out the work of building filled him with admiration.

Mr. Stanley Hamp said he thought English architects would learn more on the Continent than in America, because the materials and requirements there were more akin to our own. The Americans had a problem in the skyscraper that no other nation had had to tackle, and he did not think any other nation would have tackled it in the same way. In this country we knew very little of the constructional problems of a high building. The American architect was like the captain of a ship, who was solely responsible for the ship but was not required to know everything about the electric lighting, for instance. In the same way the American architect had to subdivide the various building problems amongst specialists, all of whom he required. He thought the America of the future would be of more interest to English architects than the America of the past. They were beginning to realise that they had to attempt to introduce really creative thought in design, and in the America of ten years' time he did not think there would be so much repetition of traditional motives. They would probably create something fresh and interesting, and until they did that their buildings would not live.

In replying to a point raised in the discussion, Mr. Bossom said the question of the decay of steel in buildings was worrying everyone in America interested in building. He cited a case of a 22-story building to which he recently made an addition, and in which the main floor had settled about 2 in. They found the trouble near the ice-making plant, where the steel had so decayed that it gave no support whatever. That building was only seven years old. When a building built in New York in 1902 was demolished in 1924 it was found that the steel beneath the fireproofing had decayed right through. In Galveston the salt in the atmosphere affected the steel; in Charleston it was affected by sulphur. But in America buildings were not erected to last for hundreds of years. The owners set out to earn 20 per cent. a year on the capital expended, so that the whole of the liability was recovered in fifteen or twenty years. The building could then be destroyed and another erected. Building in America was nearly all temporary, and should be considered from that point of view. Nobody expected a building to last two or three hundred years.

"The Palace of Westminster."

The series of illustrated lectures on architecture, confined to workers in the building trades, was continued on Tuesday at the R.I.B.A., 9, Conduit-street, where Mr. Thomas Wilson, Deputy Keeper of Westminster Hall and Clerk of the Works, Houses of Parliament, delivered a lecture on "The Palace of Westminster." Mr. H. M. Fletcher was in the chair. In opening his lecture, Mr. Wilson said that no plot of ground held for the English race so many sacred memories as the eight acres upon which the Palace of Westminster stood. The spot was sacred before the Norman Councils met, and its traditions and associations linked together our ecclesiastical and parliamentary annals. We looked back to the scant remains of the Roman occupation, and all we saw was a probable ford, a tomb, and the trace of a pagan legend. The earliest Christian tradition was equally dim. The Saxon age was little better, the legends of Canute's Palace, burnt to the ground in the Confessor's time and rebuilt again, being all that came down to us. Not until the middle of the eleventh century did we reach firm historical ground. Finally the fact emerged that there was established on the site a Shrine, a Palace and a Treasury, and out of these at last a Parliament was born.

Wherever an empire had arisen, it had its focal point for the racial traditions. Historical parallels, said the lecturer, carried us back to the tomb and treasury of the House of Atreus at Mycenæ. The Temple of Athena on the Acropolis was both shrine and treasury, and so was the Temple of the God Saturn in the cliff at the foot of the Capitoline Hill at Rome. Our ancient Norman Treasury was still standing and bore witness to an immemorial custom which came down from pre-historic days. This Treasury, therefore, was the most anciently interesting bit of the Abbey. Like Roman London, Westminster had its origin intimately bound up with the River and its fords, ferries and bridges. Just as at London, lower down the stream, the sea-farer and road-farer met at a fordable point of the river, so at Westminster a similar fordable point became the focus spot round which the city grew. The Abbey had always been conceived as enclosed within the precincts of the Palace, and in official language every coronation still took place, not in the Abbey, but in "Our Palace of Westminster." When we walked past the Houses of Parliament and the Abbey, with its old Treasury and Chapter House, and St. Margaret's and the old Parliament House, if we merely regarded each as a separate building and a distinct entity, then we missed the whole significance and the inner meaning of their history.

The lecturer then dealt with the Painted Chamber and the Chapter House. From the death of Edward the Confessor in 1066 to the crowning of Henry III covered exactly 150 years. Into this time fell the mention of the Painted Chamber and the traditional foundation of St. Stephen's Chapel. In the mediæval Palace, the Painted Chamber might be regarded in some respects as the central feature of interest in point of antiquity. Ten years before the Conquest we had mention of it. It might be considered as the chief link in the chain of an unbroken past, dating from the time of the Confessor, or even earlier, right on to the Fire of 1834. Its earliest name was St. Edward's Chamber, and it was here that the Confessor was said to have passed away. Henry III, our great builder-king, early in his reign, lavished on its decoration the most splendid work which he could command in the way of painting and costly embellishment. The wall paintings which adorned this Chamber were very important in the history of English primitive art, and had been unreasonably neglected by art historians. They were, indeed, among the earliest records which we possessed of English art, reaching back to 1237—a very early date indeed as regards English painting. Contemporary evidence told us that they were "painted beyond description." Fifty years after they were finished they were being repaired, which showed that frescoes evidently stood no better in the London atmosphere in the thirteenth century than they did in the twentieth. It was regrettable that no effort was made to preserve any fragment of such precious work.

As regards our national artistic effort in the past, we had a persistent disposition to attribute all our ancient art to foreigners and foreign influences. The truth, of course, was that there can hardly be a better documented, historical fact than that most of the work of the me age in England was the output of English men. For these works at Westminst Plantagenet monarchs pressed into their the local craftsmen from Cambridgesh Kent, as was proved by the precepts personally by them at Westminster. T portance of these paintings was seen wh realised that, executed as they were at varying from 1237 to 1265, evidently s them were begun before Cimabue was We need not be surprised to find these pa by English hands, for if our native sculp Wells, for instance (about the same "bid fair to rival contemporary effo Tuscany," why should native painters King's Palace be behind Italy? It was o eclipse of the Gothic spirit by the ignora later ages that had denied our native a ments. The tapestry looms of London i proved this, as did the inventory of t Stephen's ecclesiastical wardrobe, and we what existed in our own parish churc that date. These paintings were e English in feeling, not Italian. The cos the technique and design, all bore witn the high skill of our native craftsmen unc sway of an enlightened patronage and enco ment from a King, who, however tyranni might have been politically, was cer entirely enlightened artistically.

The conditions relating to wages and em ment on the King's works were set forth records which had been preserved.

The rolls furnished interesting inform concerning the rate of wages of artific the close of the thirteenth century. We that the superior masons, who were em in the years 1291 and 1292, had 6d. a and that the wages of the others varied 4d. to 4½d. and 5d. a day. Wages o principal smith, 6d. a day; of carpenters 4½d. to 5d. a day; of plumbers, 4½d. to day; of tilers, 5d. a day. The wages o painters in those years were as follows: W Walter, the principal painter, was paid a day, the others smaller sums, in general 7d. to 3d. a day.

An example of the arbitrary precepts were not infrequently issued by the King t cure workmen were as follows. In this ins the painters of the City of London were impressed into the King's service, and ret in it, as long as might be requisite, at hi wages. The precept might be tran thus :—

"The King to all and singular, the Sheriff Greeting :—

"Know ye that we have appointe beloved William de Walsyngham to t many painters in our City of Londo fee of the Church excepted) as m sufficient for our works, at our wages. to remain as long as may be req

The Norman Treasury, Westminster Abbey.

(given him authority) to arrest all who oppose or prove rebellious in this er, and commit them to our prisons, we shall have otherwise ordered their shment. And therefore we command that you be assisting the said William, xecuting and fulfilling all things before ioned with your aid and counsel, as and in the manner in which by the said am on our account you may be required."

lecturer then discussed St. Stephen's and said that of ancient buildings which at the Fire of 1834, none had such a t and tragic history as St. Stephen's. d in 1135 by Stephen—seventy years he Conquest—its origin was wrapped nd. Whatever the subsequent monarchs have done in the way of additions, ng the authenticated and considerable of Henry III, these were almost wholly ed by the Fire of 1262, after an existence ntury and a quarter. Of the size and of this early Chapel, we knew nothing . Perhaps it was smaller than the apel started by Edward the First, the ions of which was laid in 1292. Opera- ppeared to have gone on languidly during ubles in the reign of Edward II, until hen Edward III, three years after his n, restarted the works and continued it its completion in about 1380. The g, therefore, covered a period of about s, and was therefore the work of a couple rations of English master builders and en. Professor Lethaby had summarised he Chapel meant as a building. "The hapel of St. Stephen's," he says, "was the crest of the Gothic movement in , a work imaginative of fantasy, yet hole simple, large, noble."

befell this English mediæval jewel, and hat desecrating hands its beauty was d, was a sad story. In 1547 Edward VI, e dissolved the Collegiate Chapels, St. Stephen's to the Commons as their House, and they left their ancient place in the Chapter House and crossed ace Yard to come back to the Palace. ere the new men of a new age, and t pioneers of new political movements, d little reverence for the material s of what they were leaving behind. giate Chapel was no doubt a very ss hole in which to legislate and in orts to make it more appropriate, no d ever accuse the Stuart and Hanoverian s. Wren included, of behaving rever- this gem of English Gothic.

ally the Chapel contained a series of le and beautiful wall paintings. As heir date, these were probably about s later than those in the Painted and, as we should expect, showed ous advance in technical achievement. e Fabric Rolls, which we possessed, we learnt that the paintings represented at least 16 years of continuous work. They were undoubtedly by English artists, and were earlier by 25 years than the Wilton House and Westminster portraits of Richard II, probably the earliest English paintings which we possessed. The decline of St. Stephens as a jewel of Gothic art came in 1692 when Wren, acting upon instructions, lowered the walls and made a new roof and ceiling. The Chapel was therefore changed beyond recognition and the mere ghost of the beautiful Chapel of Edward III. The emphasis was no longer artistic, but severely political. After Elizabeth it was no longer used as a royal residence. The Palace became a mere mosaic of its beautiful past, battered and torn by succeeding generations.

At the beginning of the nineteenth century Wren's front was still standing, but by 1825 it has been altered by the additions of a false front and a gable without roof, set between two of Wyatt's fantastic pinnacles. The end came, however, in 1834 when "the Houses of Parliament caught fire and all attempts to stop the conflagration were unavailing. The destruction was so far complete that preservationor restoration was out of the question and the erection of a new building was inevitable, on a scale and with an opportunity for the exercise of architectural effort hitherto unexampled in England. The thought of this great opportunity, and the conception of designs for the future might be in Mr. Barry's mind, as in the minds of many other spectators, with those more obviously suggested by the spectacle itself." So wrote Barry's biographer.

The state of feeling and spirit in which the present building had its rise was fully expressed in the official language inviting competitive designs for the new Houses of Parliament. "We shall not simply possess a structure that may bear comparison with any foreign structure of the same era, but that will at once take English architecture out of the shadow of its own greatness, by rivalling the glorious productions of our own forefathers, the builders of the wonderful abbeys and cathedrals."

How far the Victorian Age succeeded was a personal question which could be decided by those who knew the present building. It was a great architectural effort, and a crown worthy of the Gothic revival.

DISCUSSION.

Mr. Fletcher then proposed a vote of thanks to Mr. Wilson, who, he said, had shown very clearly that we should not give up pride in our native craftsmen. Regarding the present Parliament buildings, he had been looking in the Architectural Magazine for the year 1839, when the great architectural competition for the new designs was being decided, and from that magazine there was no doubt but that in the popular mind Barry's design was the best. Regarding the actual buildings, there was a curious point that while the clothing of the buildings was Gothic, the structure was Classic in conception, with symmetrical massing and with the main lines horizontal. This latter feature was not found in mediæval building, and there was no doubt but that Barry translated it into the national form of Gothic. To gain the best view of the Houses of Parliament, he would advise a walk along the Embankment in front of St. Thomas's Hospital; the place was deserted and proper appreciation could be given to the view.

Mr. Wilson then replied to various points raised by members of the audience. In reply to the Chairman's question regarding the mixture of Classic and Gothic in the building, he said that there were two men concerned in the carrying out of the work, Barry and also Pugin. The interior was the work of Pugin, and no one could look at the stone work outside without realising that it was designed by a woodworker. In answer to a question by Mr. Gentry, on the suitability of the stone used in the construction, Mr. Wilson said that the failure of the stonework was due to the well-known ineptitude of experts. A commission was set up, which spent £40,000, visited 92 quarries and finally chose magnesium limestone, quite forgetting that limestone was full of geological fissures and would rot down especially in Gothic construction. It was not the London atmosphere that was at fault, but the stone itself. Lincoln's Inn, built at the same time from the same stone, was an even worse example of decrepitude. Regarding the existence of parts of the early walls now, Mr. Wilson said that the only part left was the cloister of St. Stephen, which the fire of 1834 somehow did not get at. In reply to Mr. Miller's question as to the authorship of the sculpture, the lecturer said that the sculpture was English. In fact, so good was English work and so far ahead of all European craft that at that time sculpture was imported into Spain from Nottingham. It was the fashion to give the credit abroad for everything. The English turned Torel into Torelli, but he was English and very probably born in Essex. Mr. Sharp suggested that there had been some lack of foresight in making the House of Commons so small, but Mr. Wilson replied that though the House held 485 members, they were never all there together, and so it was an advantage to have it slightly smaller from the point of acoustical benefit.

The chairman's vote of thanks to Mr. Wilson was then heartily accorded and the proceedings terminated.

The London Building Acts.

REPORTS OF THE R.I.B.A. LONDON BUILDINGS ACTS COMMITTEE.

The following reports of the R.I.B.A. London Building Acts Committee have now been published together in pamphlet form, and can be obtained on application to the Secretary, R.I.B.A., price 1s. :—

(1) Report on the Reform of the London Building Acts, 1894.

(2) Report on the Regulations for Steel-framed Buildings (L.C.C. General Powers Act, 1909).

(3) Report on Mr. Topham Forrest's Report on the Construction and Control of Buildings in America.

The three reports deal with matters of considerable interest to all architects. The matters are still under consideration by the L.C.C. and will ultimately be embodied in their Amendment Act. The Council of the R.I.B.A. have ordered that the Report be printed to enable those who are interested to make further suggestions should any points occur to them. These suggestions should be forwarded to the Secretary of the Institute as soon as possible.

Intermediate and Final Examinations and Relegated Candidates.

The attention of Candidates is called to the fact that the Council of the R.I.B.A. has decided that unless a candidate passes in at least two subjects in the Intermediate and Final Examinations, he shall be required to take the whole of the examination at a subsequent sitting.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

The Registration Bill.

SIR,—In your footnote appended last week to the letter signed "Isis," you state that the Royal Institute of British Architects has by an overwhelming majority agreed to the principles of Registration by Act of Parliament, and if majority rule means anything the Institute had no alternative but to introduce a Bill in fulfilment of this expression of opinion.

I would like to recall the report printed in *The Builder* (December 17, 1926) of the Special General Meeting of the R.I.B.A. held "for the purpose of approving the Registration Bill." Your report stated "there was an attendance of some seventy or eighty members." Then we read that Mr. Welch declared that the Special General Meeting could not be held to be representative of the whole profession, and that he complained that "for *many* it was impossible to attend a meeting held at 2.30 in the afternoon." And this was the Special General Meeting at which the Registration Bill was finally approved, so far as the ordinary members of the Institute were concerned. Further, we were informed by your report that Mr. Welch enquired whether the Bill had been approved by the Allied Societies in *general meeting* or only by the Councils of those bodies. The Chairman replied that the Bill had been before the Councils, *not the members*. Would it be unfair to suggest that the attendance at these Councils was probably as unsatisfactory relatively as that at the Special General Meeting? But, in any case, does this limited and restricted consideration given both locally and nationally amount to an "overwhelming majority" having agreed to the principles of Registration by Act of Parliament? Are we to understand that the "expression of opinion" secured in this particular way is to be regarded as being equivalent to and the same as the considered and expressed judgment of the body of members of the R.I.B.A. and its Allied Societies? Surely it is not majority rule actually, but only nominally and theoretically. Moreover, the R.I.B.A. does not speak in the name of the thousands of unattached practitioners. Professor Edward S. Prior makes it perfectly clear that it does not speak for him, and there is a large volume of other professional opinion that denies the right of the R.I.B.A. to speak for all architects and surveyors.

The principle of Registration is one thing; the attempt of the R.I.B.A. to use this principle for its own advantages and special interests is quite another. A perusal of the Bill will disclose the fact that the Institute is less concerned with the principle of Registration than, as Professor Prior tersely remarks, with setting itself up as "a court of judgment as to what shall constitute an architect's title and practice." That is why such strong opposition to the Bill is forthcoming—opposition that will be directed not against the principle of Registration but against the attempt of the R.I.B.A. to secure special and inadmissible prerogatives for itself.

G. B. J. ATHOE,
General Secretary,
The Incorporated Association of Architects.

[***There does not appear to be anything inconsistent in our footnote to the letter by "Isis," and the facts, as stated by Major Athoe. We stated that the principles of Registration by Act of Parliament had been agreed to by an overwhelming majority of the profession; and we think our readers will agree that this was no over-statement. Even Major Athoe appears to realise this in the first sentence of his last paragraph, used for the purpose of another argument, *re* "The principle of Registration is one thing; the attempt of the R.I.B.A. to use this principle for its own advantages and special interests is quite another thing." That may be so—in fact, we know that many members of the profession regret that they were not given an opportunity of considering the details of the Bill before it was introduced into Parliament. But they agree on the main issue.—ED.]

SIR,—I have read with interest Mr. MacArthur Butler's reply to your correspondent "Justitia." Mr. Butler does not seem to realise that the distinction between "Chartered Architect" and "Architect" may conceivably be the cause of considerable loss of livelihood to many architects. If the R.I.B.A., presumably in the interest of Unification and with the object of promoting a Registration Bill, were willing to admit members of the Society of Architects to full membership, there surely could be no reason why all *bona fide* practising architects should not have been accorded similar privileges.

Take the case of members of societies allied to the R.I.B.A., but who are not members of the Institute. Many such members of Allied Societies did not choose to join the Society of Architects, thinking, of course, their interests would be protected by the R.I.B.A. They received no consideration when the Supplemental Charter was framed, and under the Registration Bill they are permitted to style themselves "Architects" whereas former members of the Society of Architects (a body which was originally in no sense allied to the R.I.B.A.) are styled "Chartered Architects."

The amalgamation of the Society of Architects with the R.I.B.A. was a first step before promoting a Registration Bill, but it also seems very necessary that the R.I.B.A. should, even at this stage, be able to claim to represent the whole profession. This it can only do by admitting *bona fide* architects to membership. The distinction of "Chartered Architect," granted under the Supplemental Charter of 1925, may yet prove to be the chief obstacle to the passing of the Registration Bill.

EQUITY.

SIR,—I have to thank the Secretary of the Registration Committee for his observations on my letter, published in *The Builder* of the 11th inst. Perhaps he will be good enough to state which part of the Bill prevents subscribers to the R.I.B.A. styling themselves "Chartered Architects." The question is one of great importance, not only to the profession, but to the public.

It appears that a great many of the public are under the impression that an architect being entitled to the letters L. or F.R.I.B.A., or chartered architect, actually implies that they have all passed an examination.

My letter points out this misconception, and apart from giving the public a false impression, it is a gross injustice to other architects who are not subscribers to the R.I.B.A. and whom they propose to register.

The Bill is, in my opinion, illusive and lacking—no mention is made dealing with money received and accounts of fees, and the appointment of auditors (not being members of the R.I.B.A.), and lastly, for the sake of architectural assistants who at the time of the passing of the Act are unemployed, section 5 (*b*) containing the words "and is so at the date of his application" should be deleted.

JUSTITIA.

SIR,—Mr. McArthur Butler in his attempt to correct "Justitia," seems to be somewhat less than fair to his own adopted child, the "Registration Bill." That valiant infant does not attempt to do everything, and it does not attempt to alter the status of the Institute. The R.I.B.A. exists by virtue of certain charters, one of which confers on corporate members the right to style themselves "Chartered Architects." The new Bill is not interested in that, therefore it does not mention it, and so the description remains. But it does something far more important; it deprives members of the Institute—just as it deprives others—of the use of the word "architect" unless and until they register under the new Act if it becomes law.

This raises an interesting and very imp point. Suppose the President, Mr. Guy D omitted to apply for registration—ca R.I.B.A. Council add his name to the R without his previous application? "Of ignorance is often stupendous, but the R. Council, as Registration authority, can har ignorant of the existence and ability of it elected President. Dare they take acti the Courts on the ground that he is not qu because not registered? Would they declaration that his certificates are voi clients need not pay his fees? As a ju body enforcing the law of the land (und Act) they must treat all alike; there can difference between members and outsider is a very delicate position, especially involves the payment of Registration Another point. If so eminent an artist d register as an "architect," what would proper description to use for his occupat a designer of buildings?

May I also point out that the last para of Mr. Butler's letter is misleading. To b accurate the very first word "*The*" ne be altered to "*One*." There is a vast diff between securing registration of ability the forcing on those who don't want rules of a trade union character.

If the R.I.B.A. simply desires to go in directory business and register the names competent or properly trained, its job is and does not need an Act of Parliament. difficulty would be to exclude those wh anxious to be included but not desirable. would be no need of the Parliamentary to compel them to register. The "whi required to bring them under "profes discipline and control" as Mr. Butler termed it. His silence on this point is eloquent to those who study the Draft Bi R.I.B.A. rules.

HORACE R. APPELI

SIR,—As a practising architect not bel to the R.I.B.A. or any of its Allied Soc I must express myself wholly in fav registration. I was employed for a num years in Canada, where I thought it v very much to the advantage of the prof

There is one way, in my opinion, would smooth the passage of the Bill. limited time the R.I.B.A. should agai the door of membership to *bona fide* tioners who could satisfy a visiting trib to the quality of their work by actual insp In addition a short *viva-voce* examination not be objected to by anyone.

The calibre of the men on the su tribunal would have to be such that they be big enough to disabuse their minds prejudice against any practitioner wh joined one of the newer associations.

Cy

We take the following letter from *The T*

SIR,—May I plead quite independent the R.I.B.A. not to press forward wi Registration Bill as it now stands? they will be able to get a good deal of wh want by agreement with representative sations if they care to spend the time a the trouble to try. As I am at present in the authorities of the University of Ca are so perturbed at what they anticipa the effect of the Bill on their young b promising architectural school that thei sentatives would have the painful attempting to impede its passage at ever tunity. But is this necessary? I do l R.I.B.A. to which body so much is ow take a generous and conciliatory step.

GEOFFREY BU

House of Commons, February 16.

We give an extract from a letter to t from Mr. W. Forbes Campbell. Th runs:—"It is probably safe to assu the vast majority of *bona fide* prac would not be adverse from a proper ar

scheme of registration and, indeed, would ome it, but the Bill under notice cannot be ded as aiming to provide any such desirable m. On the contrary, it seeks to invest R.I.B.A. with autocratic and monopolistic rs and to establish it, as Mr. Prior rightly ts. as the sole court of judgment as to shall constitute architects' title and tice. It makes no adequate safeguard for ights of unattached practitioners, nor does ognise any title on the part of organisations r than the R.I.B.A. to speak in behalf of, to represent, the professional interests of rge number of practitioners who constitute membership. The indisputable fact is the R.I.B.A. does not represent the whole he profession, nor has it any recognised to speak on behalf of the very large number ractitioners who are members of other itects' and surveyors' organisations or hed to none. The placing of the Bill now re Parliament on to the Statute Book will t a very grave injustice upon thousands of *fide* practitioners, and is certain to meet resolute opposition from them. Surely obvious step would be to ensure an agreed being submitted to Parliament by full and k consultation between the various repre- ative organisations concerned with safe- ding and promoting the highest interests he profession."

---

rofessor Beresford Pite has addressed a r to the *Times* upon the subject of Regis- on of Architects, in the course of which he :—"The promotion of a Bill to register itects and to penalise the free practice of universal art of architecture conflicts with ter interests than its promoters seem to gnise. The protection of architects in their essional businesses by the creation of a opoly to be vested by Parliament in them- es is to be resisted by all who have a wider of the value of the art than its practitioners. The fundamental liberty of prophesying in is proposed to be fettered to a registering rd, with its examination rack and thumb- w syllabus. The free air in which the ginative arts of painting, sculpture, and oration flourish is to be denied to their her art of architecture. Already the ences of vitality in modern buildings languish er the strain of the standardising policy of mination studies, which foster the mono- sing instinct in the profession. The struggle rt with the guilds is historic. Art has too riously suffered from academical and official rol to justify this new move of the Guild Architects to extinguish the liberty of tice.

Further, the influence on architectural ation of a legal standard of mediocrity (for ther standard will be general enough to ude all architects) will be disastrous to its ook. Parliament must weigh and reject this which cannot restrain the unauthorised itecture (often spontaneous and noble) of neers, builders, and surveyors, and decline uthorise the establishment of gatekeepers he Guild of Architecture."

Other letters on the Registration question held over until next week.]

Destruction of Trees.

R,—At this time of year, when there is an ense amount of tree lopping in progress, y beautiful trees are being ruthlessly sacri- to some obscure ideal of uniformity. s require a great deal of attention, and erous trees must of course be removed, so many of our local authorities and public es appear to think that the proper way to with all trees is to cut them down ruth- to one monotonous level, regardless of position or condition. The result is that of our tree-lined streets are irretrievably d.

h a piece of vandalism has recently taken at Hampstead, where the Metropolitan ms Board has cut down a very beautiful of trees in Pond-street that made this one of the beauty spots of the neighbour- hood. There seems to have been no attempt at any discrimination between the different trees, but all have been pruned to one approxi- mate level, with the result that the finest are mutilated beyond all hope of recovery.

This is one glaring instance of what is un- fortunately taking place in a lesser or greater degree in most of our towns or cities. It would appear that there should be a Council for the Preservation of Urban, as well as of Rural, England!

STANLEY C. RAMSEY.

[We publish a leading article on this subject in the present issue.]

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

The Architects' Registration Bill.

Sir Clement Kinloch-Cooke, Bart., K.B.E., M.P., presented the Architects' Registration Bill in the House of Commons on Friday, February 11, and the following are the other Members of Parliament supporting the Bill: Captain J. G. Fairfax; Sir Leolin Forestier-Walker, K.B.E.; Mr. P. J. H. Hannon; Mr. L. Lougher; Col. the Hon. A. McDonnell, C.B., C.M.G.; Lieut.-Col. T. C. Moore, C.B.E.; Sir Newton Moore, K.C.M.G.; the Rt. Hon. Hugh O'Neill; Sir John Pennefather, Bart.; Mrs. Hilton Philipson; and Lieut.-Col. D. Watts-Morgan, C.B.E., D.S.O.

The second reading of the Bill stands as the first order of the day for Friday, April 8, and members of the R.I.B.A. will be kept informed of any development in any way in which they may be able to assist. In the meantime, they are asked to use their influence with their local Members of Parliament in order to secure the second reading of the Bill.

R.I.B.A. Form of Contract, Clause 25.

The following letter from Sir Edward Pollock is published in the R.I.B.A. *Journal* for the information of members, at the request of the Practice Standing Committee:—

Official Referee's Court,
No. 193,
Royal Courts of Justice,
November 11, 1926.

To the Secretary, Royal Institute of British Architects—

DEAR SIR,—I venture to suggest that it is advisable when the architect extends the time under Clause 25 of the R.I.B.A. Contract, he should do so in writing, and give notice to the employer of such extension. This would save any possible dispute as to whether the time had, in fact, been extended.—I am, Yours faithfully,

EDWARD POLLOCK.

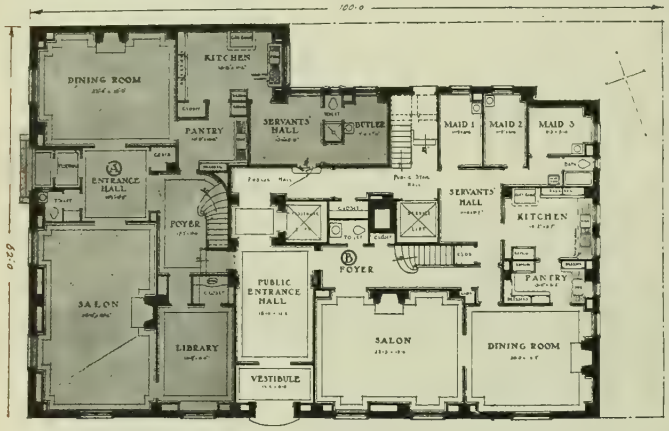
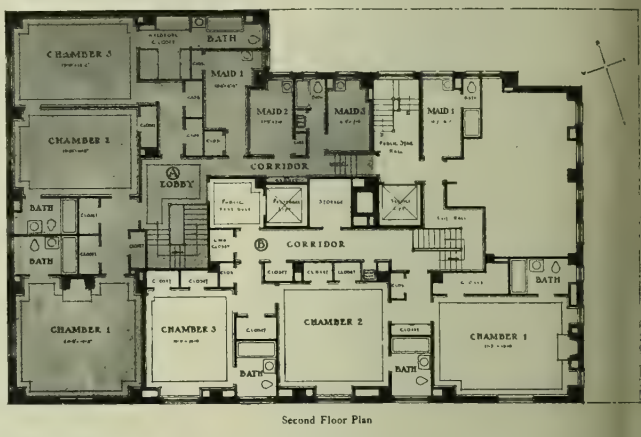
Corner site, 100ft. by 62 ft. 84 per cent. occupied ground area. 1020, Fifth avenue, New York.



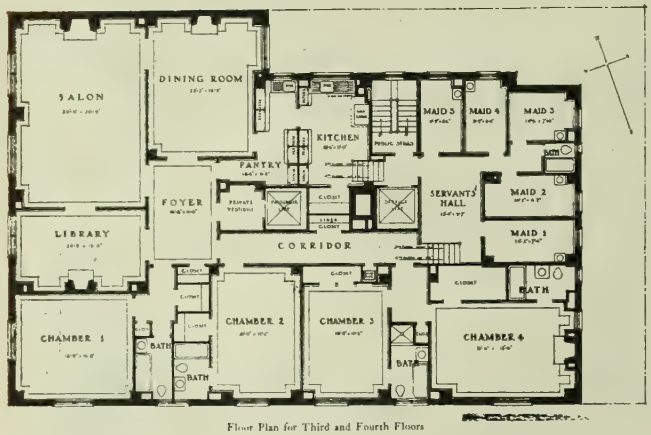
IN New York it is the practice to make all floors above the ground—excluding the penthouse—the same, and all constructed off the one typical plan. In some cases, and particularly in Chicago, this is considered too great a risk from the renting point of view, so the sizes and accommodation of various flats is often varied considerably within one building, the largest flats usually being placed at the top.

These illustrations show the various floors of an exceptional building in New York, where the plans have been varied by introducing tall salons in some of the flats. The architects for this building were Messrs. Warren & Wetmore, of New York.



OBITUARY

Mr. Lionel Littlewood.



Architectural art had an earnest devotee in the person of Mr. Lionel Littlewood, who died with tragic suddenness at Ashtead Station last week. Mr. Littlewood earned early in his career prizes for literary and artistic work, and had the fortune in subsequent years to make no mean record of his talents in a variety of building works, though his chief delight was in domestic building and its accessory arts, amongst which he had a special skill in garden design. He attac great importance to the quality of build materials as to tone, texture and suitabi to their uses. This was amply illustrated his designs for garden accessories and lay-o at the Building Exhibitions. A long list his activities is to be found in "Who's Wh Architecture." Besides these, he was m sought after as a technical expert in law ca He was appointed chief architect in one of Munition Departments during the Great W His loss is regretted by a large circle of frie whose lives were often irradiated by his genia and optimism. He was favoured in his ca by his qualities as an architect and a m He was a bachelor and lived several years w a brother, Mr. Edgar Littlewood, a build contractor, who had joined him in carrying many residences in Ashtead and neighbourho Even to those inclined to pessimism it m surely be felt, as many pass away, that a of sincere effort and human kindliness is wo living.

SOCIETIES AND INSTITUTIONS

SOCIATION OF ARCHITECTS, SURVEYORS AND TECHNICAL ASSISTANTS.

Easter Visit to Provence.

The success of the Association of Architects, rveyors and Technical Assistants' visit to me and Florence last year has encouraged Council of that society to undertake a ther visit at Easter in 1927. The venue has n changed to Provence, with Avignon as party's headquarters. In addition, the it will be extended to Marseilles, from which visit will be paid to Hyeres. The return rney will be made from Marseilles. To suit convenience of any member who may ire to remain in Avignon and district, and it the visit to Marseilles, special arrangents to do so can be made. The party will mber about 25 or 30, and the cost will be sed on these figures. A provisional proamme has been arranged, and the following ticulars are available :—

April 7th to 18th.—7th, leave London, 8.20 n.; 8th, arrive Avignon, 19.44 (7.44 p.m.); , visit to Orange; 10th, Avignon; 11th, it to Nimes; 12th, visit to Arles; 13th, ignon; 14th, morning, Avignon; leave ignon, 19.57 (7.57 p.m.), arrive Marseilles. 45 (9.45 p.m.); 15th, Marseilles; 16th, visit Hyeres; 17th, Marseilles; leave Marseilles, 15 (7.15 p.m.); 18th, arrive Paris, 8.40; ve Paris, 10.36; arrive London, 18.43 43 p.m.).

The trip will allow members ten clear days France, and as far as can be ascertained the it, inclusive of second-class travel throughout st-class by boat) and cost of accommodation Avignon and Marseilles but not including st of visits, wine, and sightseeing expenses, ll be about £12. A slight reduction will be ade in the case of members of the party who uld wish to remain at Avignon, and omit the rney to Marseilles. All applications to make e visit, which must be received not later than bruary 28, or for further particulars, should addressed to the General Secretary, who will company the party.

HE SOUTH WALES INSTITUTE OF ARCHITECTS, CENTRAL (CARDIFF) BRANCH.

Annual General Meeting.

The annual general meeting of this society s held recently at the Institute Rooms, rdiff. The hon. treasurer's report showed at the branch was in a healthy condition, and e hon. secretary's report indicated a useful ar's work. The following officers and mems of the Executive Committee were duly cted :—

Chairman, Mr. J. Llewellin Smith, L.R.I.B.A., erdare.
Hon. Treasurer, Mr. Harry Teather, R.I.B.A.
Hon. Secretary, Mr. W. S. Purchon, M.A., R.I.B.A.
Executive Committee, Mr. Percy Thomas, R.I.B.A., Mr. T. Alwyn Lloyd, F.R.I.B.A., . Ivor Jones, A.R.I.B.A., Mr. H. N. Edwards, Frank H. Heaven, A.R.I.B.A.
Representatives of the Associates and dents, Mr. C. H. Evans and Mr. G. L. Price.

An interesting discussion on the aims and ects of the branch terminated the meeting.

Smoking Concert.

A smoking concert, organised by the South les Institute of Architects, Central Branch, s held recently in the Dormie Café, Queen-et, Cardiff, as a means of providing social ercourse for the members, particularly those the Associate and Student Class. This cert, like the one held last year, proved to a great success. Mr. Harry Teather, .I.B.A., Chairman of the branch, presided, the company included Mr. C. F. Ward, .I.B.A., President of the South Wales itute, and Mrs. Ward, Mr. Ivor P. Jones, .I.B.A., Secretary of the South Wales itute, and Mrs. Jones, Lieut.-Col. E. H. ckner, F.R.I.B.A., Chairman of the Eastern Branch, Mr. and Mrs. Percy Thomas, Mr. and Mrs. T. Alwyn Lloyd, Mr. Horace Jones, Secretary of the Eastern Branch, Mr. and Mrs. W. S. Purchon, Mr. and Mrs. R. H. Winder, and Mr. and Mrs. J. Williamson. The musical programme was arranged by Mr. F. Stibbs, who was at the piano, Mr. L. Busfield (B.B.C. Cardiff, first violin), and Mr. W. T. Lewis.

SHORT COURSE FOR TEACHERS IN ART SCHOOLS

The Board of Education are arranging for a short course for teachers in recognised art schools in England and Wales who desire to refresh, or extend, their knowledge of matters pertaining to their work, more particularly in regard to the application of art instruction to the requirements of industry. The course will be conducted at the Royal College of Art, South Kensington, London, S.W.7, from Monday, July 18, to Saturday July 30, 1927, both dates inclusive, and will consist of :—

(i) Lectures by well-known men upon subjects of general artistic interest ;

(ii) Conferences and debates on matters pertaining to school or art organisation, instruction, &c. ;

(iii) Study in the Victoria and Albert Museum (for those who desire it) and visits to galleries, ancient buildings, &c. ;

(iv) Personal work. Each person taking the course will be expected to give a fair amount of time to personal work which will be directed and criticised chiefly by experts of standing. It is suggested that this work should be of a more or less creative character (*i.e.*, design), but other forms of study will be arranged, as far as possible, to meet the varying requirements of the selected candidates.

In addition to those selected to attend the course as a whole, it is proposed to allow others to attend certain lectures under conditions which will be announced later. Teachers who wish to attend the course should apply to the Board on Form 106f. U. as soon as possible, and in any case before April 9. The expenses which can be repaid will not exceed the cost of the third-class return railway fare by the cheapest route. Other expenses (*e.g.*, cab or omnibus fares or daily travelling fares) will not be allowed in addition. No grant will be made towards maintenance.

The Board are also arranging to hold from July 18 to 29, a short course in painting and decorating for teachers in technical schools.

Leeds University Reconstruction Scheme.

We illustrate this week the third premiated design in this competition, by Messrs. H. V. Ashley & Winton Newman, FF.R.I.B.A. The winning design by Messrs. Lanchester, Lucas & Lodge, was given in our issue for January 28, and the second premiated design by Messrs. John C. Procter & Joseph Addison, a week later.

Flats, Portland-place, W.1.

This large block of flats has been erected at the corner of Portland-place and Devonshire-street. The accommodation generally consists of three flats on each floor, with four bed and two sitting-rooms and service accommodation. The ground floor consists of flats, part of the accommodation of which is placed on a basement level, thus forming maisonnettes. The top floor contains additional servants' accommodation. The elevations are carried out in Portland stone, the Devonshire-street front being partly in brickwork.

The general contractors were the Pitcher Construction Co., Ltd., and the architects Messrs. Wills & Kaula. The bronze and iron gates to the principal entrance were executed by Messrs. Haskins.

House at Welwyn Garden City.

This house has been built for Mr. L. T. M. Gray on a site considerably above the road, in one of the highest points of Welwyn Garden City, looking across a disused chalk pit, and commanding fine views of the neighbouring country. It is built in Hertingfordbury stock bricks, and roofed with pantiles. The bow windows seen in the illustration are made of steel.

The accommodation is of a special character, there being only one living room (30 ft. by 14 ft.) and a study (18 ft. by 14 ft.), with a small "kitchen" to be used as a maid's sitting-room and a working kitchen-scullery. On the first floor there are two sleeping-porches with adjoining dressing-rooms and two bedrooms, whilst the attic space is occupied by nurseries and a large play-room. The floors generally are of oak, and the internal doors in mahogany.

Messrs. C. Murray Hennell, F.S.I., and C. H. James, A.R.I.B.A., are the associated architects; the builder was Mr. W. H. Shrouder, of Basils-road, Stevenage.

ROMAN AMPHITHEATR

In a recent lecture at the Central Sc of Arts and Crafts, Sir Banister Flet V.-P.R.I.B.A., described the Theatres, An theatres and Circuses as providing neces amusement for the social life of Roman citi Roman theatres were founded, he said, on G theatres, and were indeed often adapted them, but the different genius of Roman dr required certain important changes of plan. old Greek orchestra became unnecessary, an space for chanting and dancing was now give to stalls for spectators; while the increase i number of actors brought about a correspon enlargement of the stage. The oldest and magnificent of Roman theatres was the ru Theatre of Marcellus, Rome, began by J Cæsar and finished by Augustus, and it entirely built on a level site. This great bui was interesting in the history of architectur the Doric and Ionic Orders were placed one the other, and used not constructively decoratively. It is therefore a fine examp the Roman "motif" in design, which w composite form, combining as it did that u wall, arch and order which was the essen Roman building design as distinct from G

But the mimicry of the stage failed to sa the virile Roman race, which revelled in physical combats between man and wild be and for these displays great oval amphithe were built, which were entirely Roman in c and carried out with that wonderful maste intricate detail in plan and construction w could be studied to-day in the ruins, still stu dous in their size and grandeur, of the Ro Colosseum, one of the most celebrated struct in the world, remaining to-day an impre memorial of the grandeur that was Rome

A SUGGESTED CHANGE IN BUILDING LAW

The following correspondence with reference to the leading article on this subject, which appeared in our issue for February 11, has taken place between a correspondent and the Ministry of Health, with whose permission it is here published.

54, Ashcombe Road,
Weston-super-Mare.
February 17, 1927.

The Ministry of Health,
London, S.W.1.

DEAR SIRS,—You will probably have seen the leading article on water-closet construction in THE BUILDER for this week. Being interested in the revision of old by-laws, and having had this particular point brought previously to my notice, I took steps to ascertain the requirements embodied in the new by-laws for Weston-super-Mare. I am glad to see that the point is there met, and I shall be obliged if you will tell me whether Clause 75 in those by-laws is common form, or special to Weston.

I gather from occasional references in THE BUILDER that Weston is by no means the only town that has brought its by-laws up to date recently; in fact, that a large number have done so, and therefore there may be others where the same facility exists in this matter. Are particulars available?

I suppose it was thought desirable to retain the old requirement for all dwellings because of the difficulty of distinguishing, but would there be any objection if one were (e.g.) to design a block of flats with the same freedom as is given by the new Weston by-laws in a hotel? Alternatively, would it be permitted to make water-closets upon on to an internal court? This is, I believe, forbidden by the London by-laws.

Yours faithfully,
(Signed) E. M. WEBB.

Ministry of Health,
Whitehall, S.W.1.
February 21, 1927.

By-laws: New Streets and Buildings.
Position of Water-closets.

SIR,—1. I am directed by the Minister of Health to acknowledge the receipt of your letter of the 17th instant, and to state that your letter raises several points with which it will be convenient to deal separately. It may be said at the outset that the model by-laws were altered some years ago to meet the point made in the leading article in the issue of THE BUILDER for the 11th instant.

2. It is gathered from your letter that you are interested in the general problem of keeping building law up to date, and you are therefore probably aware that, in addition to the experience of local authorities throughout the country which is communicated to him as confirming authority for their by-laws, the Minister receives information constantly from various professional bodies concerned with building, and other sources, in this country and abroad.

The alteration in the model by-laws mentioned above was made in consequence primarily of representations which reached him from two quarters: firstly, it was learned that in America it was becoming more usual to construct water-closets, particularly in hotels and the more expensive class of flats, without an external wall, and secondly (and this is of much wider importance), it was found that the requirement that there must be an external wall interfered with freedom of design in factories and other industrial buildings in this country.

3. You rightly conjecture that the requirement in question has been retained for all dwelling houses in the model by-laws (with which here the by-laws of Weston-super-Mare agree) because it is difficult to differentiate between them.

A letter from a correspondent in THE BUILDER for February 18 makes a point which must be borne in mind in this connection: namely, that any modification of the old-fashioned requirement of an external wall for every water-closet should be definite, so that the person designing the building can ascertain in advance what is required, that is, it should not depend upon discretion. The Minister indeed regards this as fundamental in all by-laws and therefore (inasmuch as his professional advisers consider that in the ordinary type of small dwelling in this country it is essential to preserve the requirement of an external wall for every water-closet) the model by-law as it now stands is drafted to require this external wall for every water-closet in every new dwelling house.

It is recognised that this would preclude the use of internal water-closets in the blocks of flats of which you speak at the end of your letter, thus treating them differently from the hotels and industrial buildings for the benefit of which the alteration was made. The model by-law, however, unlike the by-law in force in London, does not require a minimum of open space adjoining the external wall of a water-closet: there is the answer to your inquiry about the use of an internal court.

It is felt, moreover, that there are not many districts in this country where it will be found necessary to allow the use of water-closets without external walls in flats and, if this is found desirable in any district, the Minister is quite prepared to entertain a modification of the words of the model by-law.

4. It is not possible, without undue labour, to say precisely in how many districts the old requirement has been modified, but the number must be large.

The figures at the end of the enclosed memorandum (not reproduced) show the extent to which, outside the County of London, old-fashioned or restrictive by-laws have been brought up to date in the last few years, and, since this particular alteration was made in the model series, few local authorities have resisted it when framing their own by-laws (desiring to retain the more old-fashioned requirement) and even these, when the purpose of the modification has been explained to them, have generally accepted it. It will thus be found that in the very great majority of new series of by-laws confirmed of recent years there is, as in the new by-laws of the Urban District Council of Weston-super-Mare, no provision forbidding the construction of water-closets with internal walls except for dwelling houses.

5. The Minister does not gather from your letter whether you are professionally or personally concerned with building in the County of London, to which the leading article in THE BUILDER for February 11 specially referred. He has not been informed of the difficulties which, it is gathered from that article, have been felt in London, but he has learned from the Press of preliminary discussions, directed towards bringing up to date the by-laws adopted by the London County Council in 1893, and he anticipates that a preliminary draft of the County Council's proposals may soon be forwarded for his consideration.

Those interested may rest assured that in considering any such proposals he will not overlook the provisions of the model by-laws or the modern practice of local authorities outside London, on this particular point or others, and that he will welcome any proposals which the County Council may make on the same lines, including any further steps towards freedom in building which can safely be taken.

I am, Sir,
Your obedient Servant,
A. N. C. SHELLEY.

Sheffield Education Developm

Considerable development in scho is about to begin in Sheffield, the sch erection of eighteen schools in the years having been sanctioned by th Education. Almost every one o schools will be built of interchangea so that portions of the new schools and children installed in them befo of the structure is completed. The consist generally of rooms of one st round a big quadrangle.

THE LONDON SOCIETY

"NICHOLAS HAWKSMOOR."

H. A. TIPPING read a very interesting
o the London Society on Friday last on
fe, character and achievements of
s Hawksmoor, Lord Spencer being in
ir.

ksmoor, said the lecturer, was essen-
a London architect, closely connected
ie erection and alteration of many of
rches and public buildings, and if we
ot place him in the first rank of his
ion, yet he played an important, per-
n essential part in the careers of two
greatest and most original architects.
n Nottinghamshire in 1661, he entered
office at the age of nineteen. Wren
his official capacity as surveyor to the
of Works—then busy with St. Paul's
al and the City churches, with the
of Winchester and Kensington, and
pitals of Chelsea and Greenwich, and
moor very soon appeared on the office
ets. In 1682 he was employed at Chel-
d in the following year at the Palace
chester. When William III. purchased
gham House in 1689, Wren was con-
about its alteration and enlargement,
awksmoor, as clerk of the works, im-
ely appeared on the pay-books of the
and there remained until 1715, when
ame clerk of the works at Whitehall,
nes's, and Westminster.

nwhile he had become connected with
rich, being appointed clerk of works
Hospital in 1698, and deputy surveyor
5. As Wren remained at the head of
ice of Works until 1718, he was Hawks-
official chief until then; but the latter
t appear to have been closely connected
nuch of Wren's work or subject to his
ce after the association with Vanbrugh.
and how did that begin? Wren, a
ns and broad-minded man, had seen
e qualities and defects of these two men
n the way of their achieving much
but promised great success in combina-
This was not only an interesting
e, but a probable one. The little mate-
had as to Vanbrugh's early years
him to have been a soldier and a play-
a wit and a man of taste, consorting
he clever group of authors and aris-
that formed the Kit-Cat Club. It was
that he was the friend of Manchester
rlisle, and no doubt the latter, struck
views on architecture, engaged him to
hitect of Castle Howard, the palatial
n the Italian manner that he wanted
in the wilds of Yorkshire But it was
nlikely, said the lecturer, that he sug-
this to Vanbrugh, or that Vanbrugh
ok the job, unless it was already cer-
at he could have a full measure of
ce from the one professional who
hly understood his job, and yet was
d to accept a subordinate position.

Dictionary of National Biography
that at St. Paul's, Hawksmoor assisted
on after it was begun in 1675. That
ittle previous. Hawksmoor was four-
ars old in 1675, and no one dated his
to Wren's office until he was nineteen.
r as an apprentice he was given any-
o do in respect of the Cathedral was
n, but he certainly did not appear on
sheets until seventeen years after it
gun. Payments were made monthly,
architectural department had, up to
nsisted of Sir Christopher as Surveyor-
. John Oliver assistant surveyor,
e Spencer clerk of the works, and
ussell clerk of the cheque, their re-
monthly payments on the Cathedral
being £16 13s. 4d., £8 6s. 8d.,
8d., £4 7s. 4d. But on and after the
of that year there was added to this
list the following item: "To
Hawksmoor for assisting the Sur-
is month in copying of designs and
ecessary business for the service of
this work at 20d. p. diem (being 27 days in this month) 02,05,00." That became a regular monthly entry for some twenty years. This copying of designs may well have included an occasional translation of Wren's preliminary sketches into working drawings.

As regards City churches, Hawksmoor appeared on the accounts earlier than on those of the Cathedral. These churches, be it remembered, were, as far as their fabric was concerned, like the Cathedral, a national affair. They were largely financed through taxation and paid for by the Exchequer, which required very complete accounts.

"Was Hawksmoor, aged thirty-four, and after fifteen years under Wren, still limited to copying designs and engrossing the state of accounts?" asked the lecturer. It was more reasonable to suppose that his copying might sometimes have meant a development from a general suggestive sketch to a drawing showing as much exactness and detail as were needed by the craftsmen of the day. It might even have meant rather more. Hawksmoor was clerk of the works at Kensington Palace from 1689 onwards. Both elevations and interior details of the Palace were entirely what we should expect from Wren. But the Orangery, dating from 1704, had a slight tendency towards the massiveness and severity that Hawksmoor favoured after his association with Vanbrugh. In association with Vanbrugh on Castle Howard, from the very first his position was not that of a mere assistant to Vanbrugh but of a coadjutor, for, in 1701, he wrote direct to their client as to the progress of the work. Although we could not precisely differentiate between Vanbrugh and Hawksmoor's contributions to the finished result, we might feel certain that Vanbrugh conceived the whole plan of house, yards, forecourt, etc., as they appeared in the design supplied to the Vitruvius Britannicus, and which surely represented his individual and bold combination of mass and movement. Inside, also, the remarkable scheme of hall, stairs and galleries, with their dramatic vistas, would be his. But on matters of construction and detail, Hawksmoor would have been the authority. He still, in great measure, belonged to the school of Wren, and thus the main pile of the house had a graciousness and suavity which we did not find in most of Vanbrugh's work. Of Vanbrugh's high opinion of Hawksmoor as an architect we got a strong statement in a letter that Vanbrugh wrote in the summer of 1721 from York to Brigadier Watkins, a fellow-official at the Office of Works:—

"Here are Several Gentlemen in the[se] Parts of the World, that are possess'd w[ith] the Spirit of Building. And Seem dispos'd to do it, in so good a Manner, that were they to establish here a sort of a Board of Works to conduct their Affairs, I do verily believe, they wou'd sooner make Hawksm[r]: a Commissioner of it, than that excellent Architect, Ripley. When I met with his Name (and Esquire to it) in the News paper; Such a Laugh came upon me, I had like to have —— my Self. Poor Hawksmoor, what a Barbarous Age have his fine, ingenious Parts fallen into. What wou'd Mons[r]: Colbert in France have given for Such a Man?"

Colbert, it might be remembered, not only looked after Louis XIV's finances, but also his buildings.

The year 1710, when the Queen's College front quadrangle was begun, was also that set down for the building of the Clarendon Press, which had been attributed sometimes to Vanbrugh, sometimes to Hawksmoor, and sometimes to both in combination. The last mentioned was probably correct. The leading architectural authority among the Oxford Dons at that time was George Clarke, described in the Dictionary of National Biography as a "politician and virtuoso." He took his B.A. degree from Brazenose College in 1679, but was soon after elected to an All Souls' Fellowship, which he held until his death, fifty-six years later.

Led by George Clarke, the governing body of All Souls were full of a scheme for rebuilding. It was settled that an old cloister, lying north of the main quadrangle, should be destroyed, and new buildings, including a great library, such as Queen's already had and such as were proposed for Christchurch and Worcester, should be erected thereon. But two important points were evidently under discussion, viz., whether the old quadrangle should give place to a new one, and whether the new buildings should be in classic style or in Gothic taste. Curiously enough, considering the date, the second alternative carried the day, and it was probable that Hawksmoor, fresh from the Castle Howard towers and bastions, favoured this proposal, and thus became the author of the first important domestic pseudo-Gothic exterior in England. In the All Souls' buttery—a very finished interior—was the only presentment the lecturer knew of Hawksmoor, in the form of the bust of an elderly man with a dissatisfied mouth. It would have to be remembered that during the years that Hawksmoor was working at All Souls his duties as an official of the Office of Works were in large measure superseded, for he was deprived of the highly-prized post given to him in 1715, that of Clerk to the Board. William Benson was a dabbler in architecture, and had built himself a house in Wiltshire—which Colin Campbell illustrated in the Vitruvius Britannicus and called "Invented and built by himself in the style of Inigo Jones." He had made serious inroads into his inherited fortune, and being an active Whig, the George I Ministry felt they must do something for him. Wren was an octogenarian and had always had Tory and Stuart leanings, so, in 1718, he was removed from the Surveyorship, and Benson was given that office to hold until something better suited to him in the way of a well-paid sinecure fell vacant. Moreover, he had a brother equally eager for emolument and who now took Hawksmoor's place.

Probably it had been Vanbrugh's idea that on Wren's death or voluntary resignation he should succeed as Surveyor and Hawksmoor should follow him in the Controllership. Anyhow, the Benson intrusion aroused their wrath, which was not mitigated when Benson, making a mess of things, was in 1719 superseded in the Surveyorship by Hewitt, who, despite promises to the contrary, failed to reinstate Hawksmoor. The Dictionary of National Biography laid stress on the extreme courtesy shown in all Hawksmoor's correspondence; but the worm could turn, and when Benson and Hewitt were his theme, his language was almost as racy and decisive as that of Vanbrugh. Carlisle was doing his best for him, but there was nothing to be done till Hewitt died in the autumn of 1726, Vanbrugh having himself passed away in the spring of that year. Then Carlisle acted, and Hawksmoor was reinstated.

In the lecturer's opinion, Hawksmoor never showed his resourceful planning and the strong characteristics of his style more completely than at St. Alphege. An east-end altar table was then considered essential, but the east end of the Greenwich church was necessarily also the principal street front, and from it there must be ingress to the church. Thus, the long, unbroken temple roof was continued for a dozen feet or so beyond the east window, and was formed into a portico of the "Venetian Window" type, its sides forming vestibules giving access to the aisles (or, rather, spaces) below the north and south galleries of the church. The base of a low square tower formed the west porch, and no doubt Hawksmoor intended one of his individual lanterns or superstructures to rise from the tower. That part of the work, however, appears to have been carried out by James and does not marry well with the Hawksmoor style. Within, the church forms just one great square

room, with an eastern archway opening into the comparatively small chancel. There are no columns and no divisions into nave and aisles, except that the space under the side galleries may be ranked as the latter.

The lecturer concluded his remarks by giving Hawksmoor's opinion of the London of his day. He was deploring the entire setting aside of Wren's rebuilding scheme after the Fire and the casual way in which the City was set up again on its old lines: "We have noe City, nor Streets, nor Houses, but a Chaos of Dirty Rotten Sheds allways Tumbling or takeing fire, with winding Crooked passages (scarce practicable), Lakes of Mud and Rills of Stinking Mire Running through them." It might be perhaps rather comforting to us, who complained so bitterly of the defacing of our countryside at the present day, to find a leading architect uttering the same lamentation a couple of centuries ago respecting buildings, many of which were still existing and were esteemed by us and even held as models that we ought to bear in mind in our present re-housing.

LAW REPORT

COURT OF APPEAL.
(The Lord Chief Justice and Lords Justices Bankes and Scrutton.)

BUILDER'S ACTION AGAINST SOUTHAMPTON CORPORATION.

Smith v. Southampton Corporation.

IN this case the Corporation appealed from the judgment of Mr. Justice Swift, at the Winchester Assizes, awarding to the plaintiff, the late Mr. William Smith, a builder and contractor, carrying on business at Southampton, £1,250 damages for alleged trespass.

The litigation arose in the erection by Mr. Smith of a block of flats in the Devonshire-road, Southampton, and, upon the ground that he had contravened the by-laws, the defendants had pulled down two-thirds of the block above the second floor. The Corporation's case was that Mr. Smith, an old offender against the by-laws, had undertaken to put right what he had done in contravention of the by-laws, and it was only when he showed that he was not going to do so that the Corporation pulled down the offending part of the building.

Mr. Schiller, K.C., for the appellants, contended they were in the circumstances entitled to put their power into operation.

Without calling upon Sir John Simon, K.C., for the respondent (the executrix of Mr. Smith),

The Lord Chief Justice, in giving judgment dismissing the appeal, said it was alleged that in the building of the flats Mr. Smith had committed a two-fold breach of the by-laws, both in the materials he used and in the height and thickness of the walls. Mr. Smith denied that he had committed any breach and alleged that what the Corporation called walls might properly be described as roof. The Corporation threatened demolition, and after discussion, Mr. Smith agreed to do the work required and to comply with the by-laws to the satisfaction of the architect. For that agreement, he (the Lord Chief Justice) thought there was good consideration. But the real point in the case was whether before the Corporation sent in their men and demolished two-thirds of the flats above the second floor, Mr. Smith had repudiated the agreement. Under the agreement, Mr. Smith was given two months within which to complete the work under it; but the Corporation acted fourteen days before the time expired. Mr. Justice Swift found, as a fact, that Mr. Smith had not repudiated the agreement, but that in fact had been working as hard as he could in bringing the building into conformity with the by-laws. For that finding there was evidence to support it, and that Court could not interfere with that finding of fact.

The Lords Justices concurred and the appeal was accordingly dismissed with costs.

LEGAL SECTION
NOTES ON CURRENT CASES

Arbitration under the Acquisition of Land Act.

Now that the case is fully reported in the Law Reports, we must supplement our note of September 24 last on the case Gross, Sherwood & Heald, Ltd., *v.* Essex County Council, now reported 1927 1 Ch. 205. The plaintiffs carried on business as manufacturers of paint and varnish near the River Roding, Essex, and the defendants, under the Essex County Council (Barking Bridge) Act, 1923, obtained power to construct a bridge over the River Roding to carry a by-pass road. The approach to this bridge made it necessary for some of the plaintiff's land to be acquired compulsorily, and notices to treat were served upon the plaintiffs. The plaintiffs delivered a formal claim for compensation amounting to over £70,000, and as no arbitrator could be agreed upon by the parties an application was made by the plaintiffs to the Reference Committee appointed under the Acquisition of Land (Assessment of Compensation) Act, 1919, for the appointment of an arbitrator under section 1, subsection (1), and an arbitrator was duly appointed October 13, 1925. This gentleman devoted one day to the inspection of the premises, and on January 13 and 14, 1926, proceeded to the hearing of the arbitration. An adjournment then took place to give the parties the opportunity of arriving at a settlement, but these negotiations proved abortive, and in the meanwhile the arbitrator was taken seriously ill. On June 11 he wrote to the secretary of the Reference Committee saying he found himself forced through ill-health to resign his appointment as official arbitrator, but he would do his best to clear up the work in hand. On July 1 he again wrote to say his health had much improved, but he did not know whether he could continue the arbitration before August 1, the day when his appointment as official arbitrator for three years would be determined.

Before that date his health improved, and he attended to the business of his firm; but on July 16 he suffered a relapse, and no further step was taken in the arbitration. On August 30 the Reference Committee gave notice to the plaintiffs revoking the appointment of the arbitrator and the appointment of another arbitrator in his place, and the plaintiffs on September 15 commenced this action for a declaration that the revoking of the original appointment was *ultra vires* and an injunction to restrain the arbitration from being held by the new arbitrator. By October the original arbitrator had greatly improved in health and he was able and willing to proceed with the arbitration.

It was argued for the plaintiffs that a Government Department could not intervene in an arbitration and take it out of the hands of the arbitrator and appoint another arbitrator without the consent of the parties, and that Rule 6 made under the Act was *ultra vires*. That rule provides: "The Reference Committee may, in the case of the death or the incapacity of the arbitrator originally selected, or if it is shown to the Committee that it is expedient so to do, in any other case, at any time before the arbitrator has made his award, revoke the reference of the question to the selected arbitrator and select another arbitrator for the purpose of determining the question."

The Court held that the rule was not *ultra vires*, and referring to the facts of this case put the matter thus: The adjournment lasted several months, in the course of which the arbitrator became seriously ill and tendered his resignation by the letter of June 11. Before this was formally accepted his health had improved and he was able to attend and did attend his own business, but by doing so he was obviously treating his appointment on the panel as having been determined, by section 1, subsection (3), of the Act provided that an arbitrator whilst hol office "shall not himself engage, or b partner of any other person who engages private practice or business." The C therefore held that it was quite clear that some time before his term of office exp in August the arbitrator had disqualified self from acting as arbitrator on the p and the Committee were fully justified appointing another arbitrator in his p We have supplemented our note on this because in the short report upon which note was written this important point a disqualification was not made at all clear

Trade Union Law.

THE recent case of Forster *v.* Nati Amalgamated Union of Shop-Assista Warehousemen and Clerks (*Weekly N* January 29), in which the plaintiff, a me of the defendant Union, sought an injunc restraining the Union from applying dir or in conjunction with any other trade u or otherwise indirectly, any of the ge funds of the Union in furtherance of poli objects, and in particular from contribu to the Trade Union Congress from the ge funds sums which that body applied political purposes, appeared likely to raise interesting questions, but the decision of Court, given in the defendant's favour, tu on a technical point under the Act, which shortly be noted.

Section 3 of the Trade Union Act, 1 provides that the funds of a trade union s not be applied either directly or in conjunc with any other trade union, association body, or otherwise indirectly, in the furt ance of the political objects to which section applies (without prejudice to furtherance of any other political obj unless the furtherance of those objects been approved as an object of the union resolution for the time being in force, pa on a ballot of the members of the union, t in accordance with this Act for the pur by a majority of the members voting, where such a resolution is in force, u rules approved (whether the union is r tered or not) by the Registrar of Fri Societies are in force providing that payn in furtherance of those objects are to be from a separate fund, and for the exem of any member of the union who gives n that he objects to contribute, and also viding that a member who is exempt sha be excluded from the benefits of the uni placed at any disadvantage as compared other members, and that contribution t political fund shall not be made a conditi admission to the union.

The political objects to which this s applies are set out in subsection (3), and are (*a*) the payment of any expenses in either directly or indirectly by a candid prospective candidate for election to P ment or to any public office, before, duri after the election in connection with hi didature or election; (*b*) or the holding meeting or the distribution of any lite or documents in support of any such can or prospective candidate; (*c*) or the ma ance of any person who is a member o liament or who holds a public office; (*d*) connection with the registration of elect the selection of a candidate for Parli or any public office; (*e*) or on the hold political meetings of any kind or in t tribution of political literature or p documents of any kind, unless the mai pose of the meetings or of the distribu literature or documents is the furth of statutory objects within the meaning Act. "Public Office" in this sub means "The office of member of any

borough, district or parish council or of guardians, or of any public body who power to raise money either directly or tly by means of a rate."

statutory objects" are defined for the es of this Act, in section 1, subsection s being the objects mentioned in sec- 6 of the Trade Union (Amendment) 876, namely, the regulation of the rela- between workmen and masters, or be- workmen and workmen, or between s and masters, or the imposing of re- e conditions on the conduct of any or business, and also the provision of s. By section 2 the expression "Trade " for the purpose of the Trade Union 1871 to 1906, and this Act, means any nation, whether temporary or perma- he principal objects of which are under nstitution statutory objects. Provided ny combination which is for the time registered as a trade union shall be l to be a trade union as defined by this long as it continues to be registered.

principle of the Act appears to be as :—The fact that a trade union has its constitution objects or powers other statutory objects" within the mean- this Act does not prevent the com- n being a trade union for the purposes Trade Union Acts, 1871 to 1906, so s it is a trade union as defined by this nd subject to the provisions of this Act he furtherance of political objects, any rade union shall have power to apply nds for any lawful objects or purposes e time being authorised under its con- n (see section 1, subsection (1)). The ion given above from section 2, sub- (1), shows that the principal objects the constitution must be "statutory ," but that there may be other objects, so far as they are political objects, if ome within the definition of those ob- s set out in section 3, which we gave then the provisions of this Act apply; they are outside those objects there d, then they can be defrayed out of neral funds. The proviso to section 2, tion (1), is rather difficult to read in tion with section 1, but we read it as exempting unions registered at the his Act came into force, an exemption would not continue, for under section 2, ion (2), the Registrar of Friendly es shall not register any combination as union unless, in his opinion, under its ution the principal objects are "statu- bjects; and he has power to withdraw tificate of registration of any registered f the constitution of that union has been red that its principal objects are not tory objects," or if in his opinion the al objects for which the union is carried on are not statutory objects. eing the principal sections of the Act, come to the case recently decided.

cause of complaint, as alleged by the , was that affiliation fees were paid to ade Union Congress, which were ex- by that body on political objects which thin the Act and (as the case was) that this constituted a breach of the y restrictions contained in the Act; this case it was admitted that the ns contained in section 3, subsection ragraphs (*a*) and (*b*), had been com- ith; rules had been approved by the ar of Friendly Societies and a valid n had been passed by ballot, and all ditions precedent under the section had lfilled; and therefore the Court held any breach had been committed by the nt union it could not be a breach of isions of the Act, but must be a breach ules, and in particular of rule 45 (2), provided that payments for political should be made from a separate fund, us no cause of action as pleaded and an amendment of the claim was as being unfair to the defendants at ge of the proceedings. For what had d was this: In the first instance the plaintiff had, under subsection (2) of section 3, complained to the Registrar of Friendly Societies that a breach of the rules had been committed, and the Registrar had heard the complaint and dismissed it. Under that subsection, however, had the decision been the other way it is expressly provided that the Registrar can make an order remedying the breach, and "any such order shall be binding and conclusive on all parties without appeal and shall not be removable into any court of law or restrainable by injunction." The decision being final if the complainant succeeded, the Court asked itself the question, Had the Legislature contemplated the complainant in the event of failure being able to commence an action to obtain relief in the Courts, whilst in the event of his success the defendants would be left without an appeal? The Court held that when the complainant has elected, as in this case, to go before the Registrar, the tribunal indicated in the subsection, he cannot in the same matter go before the Courts. Thus it will be seen the decision turned upon a more or less technical point; but what has not been decided in this case is whether the subsection gives the complainant an election to go either to the Court or to the Registrar, or whether the Registrar is not the sole tribunal open to him. It was unnecessary to decide this point, as here undoubtedly the complainant had elected to go before the Registrar.

REPAIRING PRIVATE STREETS

A CASE has been reported, Nash *v.* Giles (*Weekly Notes*, November 20), which must not be confused with cases in connection with making-up streets under section 150 of the Public Health Act, 1875, or the Private Street Works Act, 1892. A complaint had been preferred on behalf of the Fleet Urban District Council under section 19 of the Public Health Acts (Amendment) Act, 1907, against Colonel F. L. Giles, who was the owner of premises abutting upon Victoria Hill-road, to recover expenses incurred by the local authority under the above section. Section 19, subsection (1), provides: "Where repairs are required in the case of any street, not being a highway reparable by the inhabitants at large, to obviate or remove danger to any passenger or vehicle in the street, the local authority may give notice in writing to the owners of the lands and premises fronting, adjoining or abutting on the street, and may require the owners to execute, within a time to be specified in the notice, such repairs as are described in the notice." Then subsection (2) proceeds: "If within the time specified in the notice the repairs described in the notice are not executed, the local authority may execute the repairs and may recover summarily as a civil debt the cost of the repairs so executed from the owners in default, and the amount recoverable from each owner shall be in the proportion which the extent of his lands and premises fronting, adjoining or abutting on the street bears to the total extent of all lands and premises so fronting, adjoining or abutting." Notice in writing had been given to Colonel Giles requiring him within 42 days to do the repairs therein specified, and the complaint stated that this notice had not been complied with and the local authority had done the works, and that the expenses incurred therewith amounted to £35 12s. 6d., which sum had been duly demanded but not paid.

Before the justices the following facts (among others) were proved or admitted:—That on November 17, 1925, upon the report of the surveyor of the local authority, it was made to appear to the local authority that Victoria Hill-road, which was not a highway reparable by the inhabitants at large, was in a dangerous condition and in urgent need of repair; that the Public Health Acts (Amendment) Act was in force in the district; that certain repairs were required to obviate danger to passengers and vehicles; that the respondent (Colonel Giles) by his solicitors objected that the notice was not in order, as the work required to be done was more than was authorised by the Statute; that at the same time as the authority did the repairs to Victoria Hill-road they also did repairs to another street, Branksome Wood-road, which ran at right-angles to Victoria Hill-road; that the respondent's premises did not abut, front or adjoin this latter road; no separate account was kept of the expense of the repairs to each of the said roads. The expenses of repairing both roads was charged upon the respective owners in proportion with the extent of their frontages to the said roads.

For the local authority it was contended before the justices that the two roads were one continuous surface and were a continuation of one another and formed one street; that the two roads were treated in the same manner and there was very little difference in the condition of the two roads before the works were commenced, and if the expenses had been calculated separately they would have been approximately the same to the respective frontagers. For the respondent (Colonel Giles) it was contended the two roads were separate streets and that the apportionment was bad, as the expenses should have been separately apportioned. The justices found as a fact that the two roads were two separate streets within the meaning of the Act, and that the Act did not permit of the inclusion of the cost of a second street in the same account with the cost of repairing the first, and consequently the apportionment of the expenses was bad and the complaint must be dismissed.

The local authority appealed, and the Court of King's Bench, consisting of three judges, unanimously upheld the decision of the justices. It was contended on behalf of the local authority that the justices had confused the apportionment required under section 150 of the Public Health Act, 1875, with that required by this Act, but the Lord Chief Justice pointed out that although the apportionment might not be the same as that under section 150, the method might be different; but there must be an apportionment, and in the present case the sum due had been apportioned on a wrong basis, that is, on the expenses of repairing two streets and not on that alone upon which the respondent's premises fronted and abutted: it was not suggested that the two roads were identical with regard to the nature of the repairs required: it was only stated that they were treated in the same manner and that there was little difference in their condition.

It was also suggested by the local authority that instead of dismissing the complaint the justices might themselves have made an apportionment, but the Court pointed out they had no power to do so.

Under the Public Health Act, 1875, it may be noted, it was held that even where two properties of the same owner fronted two streets the expenses of making-up the two streets must be apportioned in respect of each of the premises separately (see Croydon Rural District Council *v.* Betts; 1914, 1 Ch. 870). In our eighth article on "Making-up New and Private Streets," October 1, 1926, we inadvertently stated this case to have been decided under the Private Street Works Act, but the decision applies equally under that Act, as it turned on the charge on the premises created by section 257 of the Public Health Act, and section 13 of the Private Street Works Act as regards the charge on the premises refers to this section.

It may be noted that under subsection 4 of section 19 of the Public Health Acts (Amendment) Act, 1907, an option is given to the majority in number, or rateable value, of the owners, within the time specified in the notice, to require the local authority to proceed under section 150 of the Public Health Act, 1875, or if the Private Street Works Act, 1892, is in force in the district, under that Act instead of the Public Health Acts (Amendment) Act, 1907.

TOWN-PLANNING INSTITUTE

MR. DAVIDGE (President) took the chair at a meeting of the Institute held at Caxton Hall, Westminster, on February 11, when MAJOR HARRY BARNES read a paper on "The Slum Problem."

Major Barnes first dealt with the history of the subject and said that prior to 1838 there was no national effort to amend the housing conditions of the poor. Quaint ordinances strayed across the pages of ancient statutes, and here and there a gleam of private benevolence shone out, like a good deed in a naughty world, but there was little story to tell. The second stage marked the beginning of the battle. In 1838 the issue was joined, when Edwin Chadwick launched his famous first report on the sanitary conditions of the labouring classes in the Metropolis, and it closed in 1851, three years before he and his colleagues Southwood Smith and Anthony Ashley reaped the reward of their labour in being refused by a Parliament, sore and smarting after five years of vigorous scrubbing, the opportunity to continue it. The second stage differed from the first not because the relationship of housing to health came to an end, but because legislation on housing ceased to be general and indirect, and became direct and particular. The third stage lay between 1851 and 1868. It marked the emergence of Housing as a thing in itself. Public Health legislation was in being—year by year saw it growing. The vicinity of the house was under observation, but the eyes of sanitarians were turning on the house. In 1851 Anthony Ashley, afterwards seventh Earl of Shaftesbury, secured the passage of an Act for the establishment of lodging houses (not to be confounded with common lodging houses) for the working classes; and in so doing became the precursor of Addison, Chamberlain and Wheatley. His Act marked the beginning of collective action in the provision of new houses for the working classes, and history showed that action slowly broadening down from precedent to precedent. In the same year, 1851, Ashley secured the passage of another Act, one to regulate common lodging houses, in which the needs of the poorest, least industrious and most irregular of the working classes were provided for. In the hands of the police this became a great instrument of improvement. From this Act they might trace a movement which in one direction led to the erection of great model lodging houses in London and the provincial cities by local authorities; in another to houses, as admirable, which, coming into being through the Rowton House Company, yet had their origin in the inspiration which produced Sybil, a gleam from the many-faceted character of Disraeli. The movement had not yet reached its apogee, which is yet to be found in more plentiful provision of hostels for single men and women.

The fourth stage opened with a direct frontal attack on slum conditions by the Torrens Act, passed in 1868 for the improvement or demolition of existing dwellings. An Act remarkable more for its implication than its application. The Torrens Act opened two new chapters in the history of slum clearance. The first was the great chapter on Compensation, that problem which followed hard on the heels of compulsory purchase. It is a chapter which recorded the subordination of private interest to public welfare. They saw the compensation clauses gradually stripped of the wide and general phrases on which excessive claims were based and substantiated; they saw the 10 per cent. allowance for compulsory purchases disappear, together with the allowance for the value of buildings that had no value; and at last they saw discounted that part of the value of land that vanished with the restriction of its use to housing. The second chapter sounded the challenge that was taken up by the Cross Act of 1875, and continued to-day. It recorded the conflict between the two schools which debated whether salvation was to be found in reconditioning the single house, or in clearing the insanitary area. A brief stage—this fourth stage—only lasting from 1868 to 1875, but one in which men came to two important conclusions. Sanitarians were entangled in a series of Health Acts that the most pedestrian person failed to read. A clamour for consolidation began that found response in the Public Health Act of 1875, that landmark of public health. More important was the conclusion that slum conditions were too widespread, too deeply rooted to be improved by pulling down single houses. The insanitary area had swum within the ken of the slum explorer. Slum dentistry had advanced a stage. It was useless to stop the tooth, the whole set must go, and so they came to the Cross Act of 1875, and Second Main Period, in which housing emerged as a distinct factor in public health.

In the fifth stage—1875 to 1890—new developments of old problems burst into view, problems many of which still awaited solution. This period developed the controversy between the cottage and the tenement which still raged with unabated bitterness. Here, too, appeared the problem of transport, complicated by the cost in time and money of travelling and the desire of the worker to live near his work. In fact, there was not a phase of the slum problem that was not opened out. As a whole, the stage marked by two things apparently opposed—the first, the movement of attention from the vicinity to the dwelling; the second, the perception that the dwelling must be considered in relation to its vicinity. The most notable feature of this stage was without question the Second Royal Commission dealing with Housing which sat in 1885. Its deliberations and report formed a veritable Bible of the Slums. It found much to mourn for, but, on the whole, a sweeter England than did its predecessor in 1842. The three tributaries that found their sources in Shaftesbury, Torrens and Cross met in the Housing Act of 1890, and with its passage ended the fifth stage. The sixth stage, from 1890 to 1909, was spent under the ægis of this all-embracing Act. It was a code of conduct to which local authorities were called to conform. For a large part of the period between 1890 and 1909 there was considerable building activity. The needs of the working classes were being met at least as adequately as at any other time.

The seventh stage was ushered in by the 1909 Act. This Act added to and enlarged the old powers. It had a sharper edge to cut through the old difficulties of procedure and expense. In it was registered the first expansion of the idea which gave the Cross Act its character. Local authorities under it were set to consider not only how to improve a built-up area but how to prevent areas and much larger ones from becoming built up in the old bad way. They were to Town Plan. Housing formed a fresh liaison. The brief years between 1909 and 1914 were perhaps the most memorable in this history. In those years the great political parties each registered the considered conclusion that the provision of adequate dwellings for all the people of this country was beyond the power of private enterprise and must depend on the collective resources of the State. 1913 was for housing what 1870 was for education.

The eighth and present stage commenced with the 1919 Act. That Act was preceded by sundry estimates. None were exaggerated, though later they were said to be, and time had but served to prove them. In it and its successors of 1923 and 1924 a quadriga of statesmen driven by the demand for better dwellings had been put through their paces. They went in pairs—Addison and Mond, Chamberlain and Wheatley, all stressing that side of housing which attempted to bring new additional houses into being. They were the successors of Shaftesbury rather than of Torrens and Cross. The problems of the existing dwelling, its repair and replacement, and the clearance of the insanitary area had received comparatively but little attention. history shows a progressive movement fro cleansing of the vicinity to the improvem the dwelling itself. The last stage was possible by that provision of the 1919 which required separate conveniences fo use of each separate family to be provid food, fuel and washing. The task fo future in slum as in suburb was the pro of the separate dwelling for the separate complete with sanitary and other conven The present method of dealing piecemeal insanitary areas was not only intolerably but was inequitable. Some slum owners dispossessed without compensation, others allowed to remain in full enjoyment of unjustifiable incomes. There was onl way, and that was for local authorities into force the by-laws requiring the pro of separate conveniences for each se family, and, having done that, to acquir property as did not comply with the re ment at a price which took into accou cost of bringing it up to this standard. H acquired it they must comply with thei by-laws, pending the clearance, if that be necessary, of the entire area in whic property was situated. This work cou done by each local authority within its area. It meant management and super It involved those questions of labour materials that lie behind all housing e but it raised the question of land and tra only in a lesser degree. These latter que could only be settled by a combination o authorities dealing with a wide area. eighth stage had yet to find its terminal That point was a Royal Commission, the in the great series: It must be set examine the working of the Acts of 1919 and 1924, to satisfy itself of the needs country in respect of decent dwelling examine the difficulties of travel, labour, material and finance that surrounded the tion, to consider the administrative mach to hear grievances, and to suggest rem The two great Commissions of the past of 1842 and that of 1885, had been fol by legislative action of potent and ben character. The third Commission would less fruitful and was no less required.

He would hazard the opinion tha problem of the slum was to be solved by ing at one and the same time the prin and methods introduced by Shafte Torrens and Cross. With Shaftesbury must continue building new houses that required to make up shortage and provi annual increase. With Cross they mus at the entire clearance of the slum an creation of new and sanitary areas; while Torrens they must bring the insanitary ing into conformity with the requireme health, decency and comfort, using the in their widest sense to include not only which lacked water-closets and drains those which lacked food and fuel stores, ing and cooking facilities separate and d for each separate family.

Tremendous advances had been made Chadwick, and 1838. There was no why in 1928 they should not begin th once more, the last and the best that add to the clean street, the separate dw and make the English house the English

Any legislation on the question to-da faced the facts must recognise that there dual obligation: first, the provision of tary and adequately equipped dwellin rested upon the landlord; next, its m ance in a cleanly condition, this reste the tenant. Both must be enforced, tha tenant equally with that of the landlo no sentimental nonsense should be allo relieve the one or the other of the duty l laid on either. A distinction can be and a distinction must be drawn betw sanitary conditions produced by bad worse construction, insufficient repair, a produced by the destructive and dirty of a tenant. It was the easiest thing world to shriek at the landlord or ab tenant; what was wanted was a calm a

old, and the *ad hoc* bodies which had disappeared or were disappearing must find their successors in organisations of private citizens intent on the carrying out of definite programmes of reform.

The never-ending somnolence of elected persons must be rudely broken by the clamour of public opinion, and for that public opinion must be provided with a voice. That voice should be the voice of those who spoke with authority because they spoke with knowledge.

The scheme having been approved, the local authority was put into possession of an order, and plans, setting out the classification of lands for compensation purposes, detailing what housing accommodation was to be provided and how the cleared areas were to be treated. With this preparation could be made for actual work on the site. Then the trouble began. Before they could pull old houses down new houses must be ready. This in effect meant the works must be done a bit at a time. Legally the authority had power to take over the whole of the property within the area, but wise and prudent authorities did not so act. From the point of view of the acquiring authority the ideal arrangement as regarded economy was to acquire only so much of the necessary property as was required to provide the site on which the "decant" was to be built. The acquisition was timed so as to get the land cleared just at the moment the contract for the "decant" building had been made, and the builder is ready to proceed. The next thing was to arrange the acquisition of the next block of property so that the contract for new dwellings on it would be signed, and the site cleared as the "decant" block came into hand. The tenants of the old buildings would then be transferred to the "decant"—if they would do—and that was not altogether a sure thing. So the clearance went on little by little, dwelling by dwelling. It was a bit of human underpinning. If there was one thing that slum clearance told them it was to make haste slowly. The only way to get a move on was to get a lot of moves on. None of them could go quickly, but all together they might go far. That was the only expedition possible. The only real hope of substantial progress being made in one generation was by the simultaneous movement of many schemes.

If the authority acquired the property before it was ready to pull it down, it was burdened with supervision and repairs. If it left it to be taken progressively, some owners in the area continued to draw rack rents, while refraining from the proper repair maintenance of the property. The proper course was for the authority to face the music, take over the property, setting off the rents against the repairs. If this course were adopted in a large number of areas it would increase the number of slum clearance schemes that could be carried out; it would put the insanitary property within these areas in sanitary conditions with less cost to the community; it would remove the inequity of receiving income from buildings for which no compensation is paid.

He did not think they were seriously applying themselves to this problem. Their movements were spasmodic. When they had really decided that housing was as important as education, they would do what they did in 1870, they would make permissive legislation compulsory. He would believe that they meant business when he saw section 57 of the Housing Act, 1925, replaced by a section in the following words:—"There shall be provided for every housing district a sufficient amount of accommodation in separate dwellings (as hereinafter defined) available for all the families resident in such district for whose housing efficient and suitable provision is not otherwise made, and where there is an insufficient amount of such accommodation, in this Act referred to as 'separate dwelling accommodation,' the deficiency shall be supplied in manner provided by this Act."

Mr. G. Topham Forrest proposed a vote of thanks to the lecturer, who, he said, had given a wide meaning to the word "slum." He had to deal with unhealthy areas, composed of bad buildings and mean streets, for which the only practical remedy was wholesale demolition and reconstruction. During the eight years since the war in London 920 new block buildings had been provided, giving accommodation for 5,600 people. Preparations for tackling the main problem on a larger scale were being made by the development of estates acquired for the purpose.

Councillor T. White (chairman of the Liverpool Housing Committee) seconded the motion.

Dr. Raymond Unwin said they would continue to create slums so long as there was no opportunity for people to live outside slum areas. He thought more could be done by co-operation with owners. All owners were not bad owners, and a little help from the local authorities might well secure their co-operation.

Major Lovelock, Alderman E. Culpin, and Mr. R. C. Maxwell also joined in the discussion, and in reply Major Barnes repeated his suggestion that the time was ripe for another Royal Commission.

Town Planning.

The Town-Planning Department of the Ministry of Health records the following progress for the month ended January 31, 1927:—

RESOLUTIONS RECEIVED (Stage 1).

Town-Planning in South-east London.

The Ministry of Health will hold a public inquiry, at the Lewisham Town Hall, on February 17, into the London County Council's south-eastern district town-planning scheme (No. 2). The scheme, which affects an area of 7,150 acres, concerns the borough of Greenwich, Lewisham, and Woolwich and all the open land that fringes on the county boundary. Approximately, the town-planning area is bounded by Shooter's Hill-road on the north, with the addition of Charlton Park; by the Bellingham estate and Bromley-road on the south-west, and by the county boundary on the south-east. Over 2,000 acres will be preserved from building, 652 being set apart for public and 1,405 for private recreation. Additions to existing open spaces will include extensions to the park presented to Lewisham by Lord Forster, as a memorial to his two sons who fell in the war; to the Northbrook Park, Lee; and to other parks in the Woolwich and Greenwich areas. Besides the making of regulations as to the density of houses and the allocation of certain areas for business and industrial services, the scheme includes proposals for the construction of about a dozen new roads.

Scholarships in Science and Engineering.

The Board of Education have recently issued the syllabus for the examination to be held in April and May, 1928, for Royal scholarships and free studentships in science, tenable at the Imperial College of Science and Technology, London. These awards are open to British subjects of either sex, without age limit, and cover fees and, subject to evidence of financial need, such maintenance allowance, not exceeding £80 a year, as the Board think fit. The Board have also issued the regulations for the award of Whitworth scholarships for mechanical science in 1928 on the foundation of Sir Joseph Whitworth. These consist of two Whitworth senior scholarships of an annual value of £250, tenable for two years, and six Whitworth scholarships of an annual value of £125, which may be increased in special cases, tenable for three years. Candidates must be British subjects and have had handicraft experience in a mechanical engineering workshop. The syllabuses and full details of the scholarships can be obtained from the Stationery Office or through any bookseller.

THE LONDON BUILDING ACTS AND THEIR APPLICATION.—VII

By H. V. MILNES EMERSON, A.R.I.B.A.

A CANOPY was erected in front of premises belonging to the Civil Service Co-operative Society. The L.C.C. took proceedings in respect of this erection in advance of the building line. The Society applied for a rule, calling on the magistrate to state a case, but this was refused by the Divisional Court on the ground that it was a question of fact. (*The Builder*, July 11, 1903, page 32.)

Show cases and electric advertising cases, fixed to front of shop, &c., and projecting 10 in. from face of wall, and in another case over 6 ft. beyond the general line of buildings have been held not to be within this section. (L.C.C. *v.* Illuminated Advertisement Co., 1904, 91 L.T. 352; L.C.C. *v.* Scheinzik, 1905, 93 L.T. 550; L.C.C. *v.* Hancock, 1907, 96 L.T. 618.)

The Superintending Architect must choose a length of street for fixing the general line of buildings and must define the line for that length. An appeal can be made if necessary against the decision of the Superintending Architect, and the Tribunal of Appeal, under sec. 183, can vary the certificate of the Superintending Architect, and can also take into consideration the frontages of buildings in a longer or shorter section of the street to that considered by the Superintending Architect. (L.C.C. and London Building Acts, 91 L.T. 501; *The Builder*, 1904, Vol 87.)

One-story shops built upon a forecourt of premises do not determine the building line. In the case of Scott *v.* Carritt, 82 L.T. 67, the main walls of the buildings stood more than 50ft. back from the road, but the one-story shops projected upon the forecourt close up to the street, and it was held that the owner could not re-erect the buildings to a height of three stories upon these forecourts without the consent of the Council, as such buildings would be beyond the general line of buildings.

Section 23.—Buildings projecting beyond general line when taken down to be set back.

(1) In case any building or structure which shall in any part thereof project beyond the general line of buildings in a street or beyond the front of the building, wall, or railing, on either side thereof, shall at any time be taken down to an extent exceeding one-half of the cubical extent of such building or structure, or shall be destroyed by fire or other casualty, or demolished, pulled down, or removed from any other cause to the extent aforesaid, it shall be lawful for the Council to require the same building or structure, or any new building or structure proposed to be erected on the site, or any part of the site thereof, to be set back to such a line and in such a manner as the Council shall direct.

(2) The Council shall make compensation to the owner of such building for any damage and expenses which he may sustain and incur thereby and the amount of such compensation, if not agreed between the Council and the parties concerned, shall be recovered in a summary manner, except where the amount of compensation claimed exceeds £50, in which case the amount thereof shall be settled by arbitration according to the provisions contained in the Lands Clauses Acts, which are applicable where questions of disputed compensation are authorised or required to be settled by arbitration, and for that purpose those Acts, so far as applicable, shall be deemed to be incorporated with this Act.

For the purposes of this section, the expression "owner" has the same meaning as in the Lands Clauses Acts.

Note.—Section 166 provides for legal proceedings, *i.e.*, compensation if not agreed, &c., to be recovered in a summary manner.

The Strand is one instance where street widening has taken place, and any buildings taken down for more than one-half of the cubical contents would have to be set back to the new building line and compensation paid to the owner as agreed. If the building is not pulled down for more than one-half of its cubical contents, the owner can make such alterations or part rebuilding without having to set back to the new building line. Extensive alterations were made in this way to one set of business premises in the Strand, and they still form part of block projecting beyond the new building line. This section appears to provide against the possibility of rebuilding the premises in sections at different periods without setting back.

In the case of the Ritz Hotel, the Council allowed the ground floor only to be set back to the building line, and the upper floors to project over the pavement carried upon piers flush with the curb. Compensation was paid for the ground given up at the ground floor level.

When making an entrance to a new street, a building in the existing street and at right angles to the new street was pulled down. Houses were erected in the new street and a building line established. Upon the corner of the two streets a new building was commenced, partly upon the site of the old building and partly upon the garden that adjoined it. The new building was in advance of the general line of buildings in the new street, and it was held that the building fell within Section 75 of Met. Man. Am. Act, 1862. As the garden ground was not part of the curtailage of the old building, and the building having been taken down in order to form the new street, the intention of building upon the old site had been abandoned. (L.C.C. *v.* Pryor, 1896, 74 L.T. 234; and Lord Auckland *v.* Westminster B.W., 26 L.T. 961.)

24.—Notices of Definition of General Line. The Superintending Architect shall, within fourteen days after the issue of the certificate defining the general line of buildings in any street, or part of a street, place, or row of houses, cause a notice of his certificate to be served on the local authority, and on the owner of the building or land to which the certificate relates, and on the owner of the houses in the same block or row within a distance not exceeding 50 yds. on either side of the building or land to which the certificate relates, or where there is no such block or row, upon the owner of the adjoining land on either side of the building or land to which the certificate relates. Certificates made by the Superintending Architect under this Part of the Act shall be preserved by the Council and be open to inspection at all reasonable times by all persons desiring to inspect the same.

Note.—Section 187 states that such notices shall be in writing, and section 188 deals with the service of notices. Section 188 does not apply to any notice, summons, or order to be served upon the owner or occupier of a dangerous or neglected structure. Section 5 of the London Building Act, 1894 (Amendment) Act, 1898, provides for this class of notice.

25.—Provides for Appeal against certificate of architect as to general line to the Tribunal of Appeal.

26.—Conditions may be attached to consent to building in front of general line. In giving their consent to the erection of any building, &c., beyond the general line, &c., the Council may attach any conditions to such consent, and such conditions may include any or all of the conditions following, viz.:—

(1) That land in front of the building or structure to such an extent as the Council may think proper shall be dedicated to and left open for the use of the public.

(2) That the building or structure shall be used only for such purposes as may be specified in the consent, or shall not be used for any particular purposes specified in the consent unless with the further consent of the Council obtained when a change of purpose is desired.

And generally any other condition which the Council may deem it expedient to impose in the public interest.

Note.—The Council have no power to require the owner to dedicate more than the s to the public. The owner can construct &c., under the dedicated surface with nec flaps, &c., in such surface. (L.C.C. *v.* Best G.L.T.R. 499, 1893.)

Although the Council endeavour to complete dedication of land in front of &c., when agreeing to new building lines, been held that the surface need only dedicated. It can, however, be arranged the Council that, in consideration of s back the buildings and allowing the g between the back of the pavement and the ing line to be used by the public, the holder can, if he desires, display his upon such strip of ground.

27.—Consent not to affect rest of general

28.—Register of conditional consents kept and open for inspection.

29.—Defining in what street a buildi structure is situate.

30.—This part of the Act shall not within the City.

31.—Certain powers of railway companie affected by this Part of Act.

EXHIBITION NOTE

The Prix de Rome Competitions.

The architectural subject for the Prix de Competition for 1927 was of a fairly simple a ceremonial staircase for a Foreign Office if there is nothing of any exceptional there is, on the whole, a good response

Twenty-nine designs are exhibited and of these nine have been selected for final petition. The competitors have had to as a certain type of design which would be sui to go with a building of similar character. designs are, on the whole, characterised by dignity and refinement, and mostly g traditional lines. "So" is dignified monumental, and has none of the traditi orders or usual columns, frieze, and co The treatment is one of extreme simplicity could be made to produce fine results. entrance is one of the best with ready app to cloak room. "Faust" is one of the designs, and the staircase with its ci coffered ceiling would be impressive; th a good feeling of scale about this design. cloak-rooms are placed to the front of the ing instead of using that valuable portion site for minor reception rooms as in some o "Cras" shows some invention with an elli entrance hall out of which are entered ci stairs and lifts, right and left. The cloak space seems rather limited. The upper suggests much variety and interest of The designs generally suggest that a c space be marked off at the head of the sta for receptions, rather than an opening int large reception gallery. The awards se have been well made, but there is a goo of meritorious work outside the ranks selected, as in "Bell," "Oli," and "G

In the sculptural work, four are select final competition, but only in one, number do we note any special outstanding qu There is a good deal of refinement in thi petitor's work, and his standing figu admirable.

Amongst the large display of decorative ing, we regret not to see anything that our sympathies and holds any specially prospects in design or colour. In the eng competition, the record is poor, but promising work, as shown in No. 29, is s for final competition.

RTY WALLS: PRACTICE AND DECISIONS

CHAPTER VIII.—EASEMENTS IN CONNECTION WITH PARTY WALLS.

By J. DOUGLAS SCOTT, A.R.I.B.A.

following observations merely outline eneral principles involved and indicate ature of the cases usually met with in g with party walls. The existence of sement will often prevent or at least t serious obstacles to an owner desiring prove or develop his property to its full , and it is the duty of the building 's architect to ascertain at the earliest nt the nature and extent of any ease- that may affect the proposed work, as terference with an adjoining owner's is too slight to invoke and obtain pro- from the Courts. The early recognition such rights will usually allow of nego- s and so avoid litigation, delay and e.

easement is a right which the owner of ighbouring property, called the dominant ent, enjoys as against the owner of r adjacent property called the servient ent, whereby the servient owner has to something on his property or abstain loing something to his property for the of the dominant owner.

ements can be created either by express plied grant, by express or implied reser- , or by prescription either at common by statute. An easement that has been d for the prescriptive period of twenty will be considered by law to have been ted by express permission for a then nt consideration, which the lawyers term plied grant, and will be regarded as the ty of the possessor which must not be red with or varied or taken away with- mpensation or by the express leave of ssessor; but an easement may become nished by abandonment, by unity of sion, or by Act of Parliament. The nts most often met with in connection arty walls are those of support, which fall within one of the following ons:—

he owner of a piece of land must not so re with the soil thereof as to cause the ent of the adjoining owner's land or ildings thereon.

he owner of a house must not so alter to diminish or remove the support o afforded to the adjoining house.

he owner of a house who pulls it down ake such care that the adjoining house damaged by the removal of the support o enjoyed.

ay be stated as a general principle that building owner by removing any sup- hatever in any way jeopardises the ad- owner's house, he must uphold and it until he has restored the support ormer efficiency.

rty wall being the joint property of the joining owners, when one of them pulls is house, he must take every precaution t no damage occurs to the adjoining by reason of his operations, and for this should shore up the party wall to re- temporarily the support which he is away from it. Usually, flying or raking are erected at intervals along the face party wall and raking shores at each it, as it is frequently found that old walls are built with a straight joint and not bonded with the front or back or are disconnected from them by a all the way down.

he leading case of Angus *v.* Dalton, by the House of Lords in 1881, it was wn that a right to lateral support from joining soil may be acquired for a build- ich has enjoyed that support peaceably thout interruption for the prescriptive f twenty years. The obligation which ation of such a right by user imposes e owner of the adjacent soil is to give ed support to the building, but con- y with that obligation he can make any use of his land which he thinks proper. y dig into or even remove the strata from which the building derives support, provided he gives efficient substituted support by means of a retaining wall, underpinning, or other device. The owner of the building cannot complain that his right has been infringed unless and until the stability of his building has been affected by the withdrawal of its lateral support.

The right of lateral support may be derived from an express grant or by prescription when the enjoyment of it has been open and not surreptitious.

Whilst no one may do anything which results in the withdrawal of support from his neighbour's building entitled to support, apparently there is no obligation to do anything to maintain the support hitherto afforded unless there is an agreement to the contrary, as it was held in the case of Colebeck *v.* The Girdlers Co., 1876, that a person wishing to preserve his right of support must himself take active measures for that purpose.

In the case of Sack *v.* Jones, 1925—where it was claimed that the flank wall of the defendant's house, the end one of a terrace, by leaning outwards had pulled over the party wall between it and the adjoining house and so had caused structural damage—it was held that even if this allegation were established there would still be no cause of action, as although there was an easement of support in favour of the plaintiff's house, there was no obligation to the plaintiff by the defendant to keep her house in repair for that purpose. The plaintiff relied on the fact that if an owner allowed part of his house to fall over on his neighbour's land he would be liable in trespass or nuisance, and contended that an owner was equally liable if he withdrew support by allowing his house to fall away from and pull over his neighbour's house, but could produce no authority therefor.

If by the removal of his own building a person causes injury to his neighbour's having the right of support he must compensate him, however carefully the operation may have been performed; but if there were no such right, the person pulling down will only be liable for negligence (Dodd *v.* Holme).

A right of action accrues when actual damage is sustained and not from the time of the withdrawal of the support, and the aggrieved party can sue for damages at any time within six years of the damage occurring and fresh claims may be made on every successive occurrence of fresh damage resulting from the removal of support.

Where the owner of a terrace of houses enjoying the mutual support of each other parts with one of them, the right of mutual support passes to the new owner, the legal presumption being that the owner reserves to himself such right and grants an equal right to the new owner.

The Law of Property Act, 1925, section 38, in giving the right of partition vertically in a party wall, preserves the rights of support and user over the rest of the structure corresponding to those which would have subsisted if a valid tenancy in common had been created, and in case of dispute, the Court, on application by any person interested, may make such order as it thinks fit as to these rights.

Where a building is erected against a neighbour's wall, utilising it for the purposes of support and as an enclosure to one side, a statutory title to the wall will not be obtained by lapse of time, as it does not form part of the building so erected, but is merely an abuttal thereof but would become entitled after a lapse of twenty years to an easement of support (Waddington *v.* Naylor).

The liability for disturbance, alteration or removal of support may be such that both the employer and contractor become liable, and it is the duty of the architect to see that the contractor indemnifies both the employer and architect against all claims and demands connected with the carrying out of the work. In deciding the case of Bower *v.* Peate, in 1876, it was laid down that a man who orders a work to be executed from which in the natural course of things injurious consequences to his neighbour must be expected to arise, unless means are adopted by which such consequences may be prevented, is bound to see to the doing of that which is necessary to prevent mischief and cannot release himself of his responsibility by employing someone else, whether it be the contractor employed to do the work from which the danger arises or some independent person employed to do what is necessary to prevent the act he has ordered to be done from becoming wrongful.

In the case of Lemaitre *v.* Davis, 1881, it was held that the reasons why provisions in a specification are not sufficient is that the person who employs a contractor really does his own work with the assistance of a contractor and is responsible for seeing that the work is properly done.

The right of support is recognised in the London Building Act, 1894, section 93, whereby a building owner is required to give the adjoining owner notice, accompanied by plan and section, showing the site and depth he proposes to excavate, when he intends to build within 10 ft. of the building of the adjoining owner, any part of which, within such 10 ft., extends below the foundations of the adjoining owner's building; and he must, if required by the adjoining owner, underpin or otherwise strengthen the foundations of his building. The building owner will be liable to compensate the adjoining owner and occupier for any inconvenience, loss or damage that may result by reason of such operation, and is not relieved from any liability to which he would otherwise be subject in case of injury caused by his operations.

At common law, one co-owner of a party wall cannot maintain an action for trespass against another co-owner for underpinning the party wall to substitute a new foundation where the work can be done without injury to the structure, but, in the county of London, the work can only be done under proper notice according to the provisions and in the manner prescribed by the Building Acts (Standard Bank of British South Africa *v.* Stokes, 1879).

The rights of the building owner under the previous Act of 1855 were held to apply equally to a party wall belonging entirely to the adjoining owner (Knight *v.* Purcell).

The easement next in importance affecting party walls is that of light and air. This is a negative easement, as it restricts the servient owner from doing certain things with his property.

Under the London Building Act, 1894, no windows can be formed in party walls, but those existing can be retained. It is usual in drawing up a party-wall award, where any question of ancient lights is involved, to insert a clause exempting the rights in respect thereof from any decision in the award.

Some surveyors will not sign an award even with such a protective clause, as they consider, by assenting to an increased extent of party wall necessitated by the proposed larger new building, that they would prejudice their client's position in respect of any damage to their ancient lights. Personally, I do not agree with this attitude, as the statutory duty of the surveyors is confined to the rights of building and adjoining owners in respect of the construction of the party wall as defined under Part VIII of the Act, and section 101 confers a reservation of these rights of light.

In my opinion, it would be of advantage to all parties, when the question of interference with ancient lights arises through the building or raising of a party wall, that the same surveyors, after settling the party-wall award, should proceed, with the consent of the respective owners, to draw up an award in respect of the ancient lights wherein they could determine the amount of compensation either by a money payment or by enlargement or other structural improvement of the lights affected or both, and so avoid delay, heavy law costs, or serious curtailment or mutilation of the proposed building.

The obligation to make good all damage under the corresponding section of the pre-

vious Act was held to cover damage to the adjoining rights of light and not only damage to the structure itself (Crofts *v.* Haldane, 1867). The judges in the same case held that the statutory tribunal of the three surveyors were not the proper persons to adjudicate upon the interference with ancient rights of light arising out of the raising of a party wall; but I do not think this old decision would prevail to-day if made the subject of a separate award with the authority of their respective clients, as I have previously advocated.

Another easement often encountered is that of the flow of water, which usually takes the form of a right to let water from the roof of one house flow through an opening in the party wall on to the roof or gutter or into a down pipe of the adjoining one. This form of easement, when interfered with by the raising of the adjoining building or raising or rebuilding the party wall between the two properties, is one that can usually be easily adjusted and seldom leads to litigation, unless the easement is materially altered to the detriment and without the sanction of the owner thereof. Similarly, an eaves gutter overhanging an adjoining property desired to be raised can usually be replaced by an internal gutter upon obtaining the owner's consent and bearing the cost of the necessary work.

The flow of water under a party wall usually takes the form of a right to allow the drainage of one house to pass under the adjoining one, and in old leases there are generally covenants to maintain such rights. The existence of such an easement may prove a very inconvenient one to deal with when rebuilding or developing a property, and this question has been a fruitful source for litigation. Possibly the best course when such an easement is encountered is to invoke the assistance of the local sanitary authority in dealing with the matter. One must always remember, in deal ing with this problem, the difference at law between a combined drain and a sewer, as over the latter one cannot build.

The owner of an external wall on the boundary of his property sought to restrain an adjoining owner from growing a creeper up his wall, and on appeal from a County Court decision it was held that the growing of the creeper was an easement which the adjoining owner had acquired by user, but that did not give him a right to choke his neighbour's gutter, and damages for this trespass were awarded (Simpson *v.* Weber, 1925).

Questions of smoke are usually dealt with under the laws relating to nuisances, as the law does not recognise the right of smoke passing uninterruptedly through one's flues in a party wall as an easement.

An owner cannot make an adjoining owner liable for his flues not drawing properly and causing the smoke from his fires to escape into his rooms by reason of the raising of the party wall, although previous to the raising he has enjoyed immunity.

The interference with the direction of a current of air was held not to be actionable, although productive of grave inconvenience and even injury, as in the case where the defendants had raised the height of their house, with the result that the plaintiff's chimneys smoked (Bryant *v.* Lefever).

Under the London Building Act, 1894, section 88 (6), it is made a condition to the right given to a building owner, when raising a party wall or an external wall built against one, that he shall carry up the adjoining owner's flues and chimney stacks to the requisite height, a provision that might well be introduced in the building regulations and by-law of all local authorities, and one that should always be included in a party-wall award where the conditions apply.

Where smoke escapes through cracks in a flue in a party wall into the adjoining house, the person whose fire causes the smoke is not liable unless he has been negligent or lacking in reasonable care, as the lighting of the fire in his grate is a fair and reasonable use of his premises and for the purposes for which the grate was constructed (Jones *v.* Pritchard, 1908).

ARCHITECTS' & BUILDERS' INQUIRY BUREA

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—ED.

Profit Sharing Scheme.

[REPLY TO "PROFIT SHARER," FEBRUARY 11.]

SIR,—Arising out of your correspondent's letter, and in no mere debating spirit, I should like to question his opinion that no foreman should be a trade unionist. I think that is a bad opinion and extremely reactionary; and far from sharing it I would go so far as to say that the good foreman should not only be a trade unionist, but a leading trade unionist. I can conceive no state of affairs so destructive of real discipline on a job as that which arises when an unskilled labourer who happens to be a shop steward comes to his "general officer"—the general foreman—and demands to "see his ticket," or to question the employment of a suspect. It is a calamity that not only masters, but the men themselves, should discourage a co-ordination between discipline in the Union and discipline on the job, and I fail to see how good feeling between master and man can ever be safe, or how the true tradesman sense can ever thrive in the trade union, until this present policy is reversed. As an architect, I will admit that only once have I encountered an operative with high authority in both union and trade. He was a foreman bricklayer on a £20,000 contract and also local secretary of the union, and that during the period of the last big building strike. I speak as I found him, a man with the highest consideration for his master and his subordinates, and respected by both. Cannot something more be done in this direction? My excuse for writing this is that I would like to ask builders and trade unionists who read this column to give us their views upon this question, and their experiences where similar cases have come before them. DOUBTFUL.

Precautions Against Dry Rot.

[REPLY TO "H. S.," FEBRUARY 4.]

SIR,—There is often more objection to low air bricks than to high ones, as, for example, when the ground floor is only slightly above the ground level. In such a case, a low-set air brick is apt to become covered with heaped-up soil and even to admit water direct into the under floor. In such cases, it is necessary to form a flue down from the air brick to discharge below the level of the bottom of the joists, and if this is properly formed there is no fear of stagnant air under the floor. I was recently in a house where the air bricks were above ground floor level, and where the draught was so strong as to blow the carpet up from the floor, which was defective.

In the case quoted, however, it must be presumed that the high air bricks were not constructed with properly made flues, and that there was sufficient depth above the outside ground level to get direct air bricks and openings above same and below the underside of the joists. I would, however, advise your correspondent to watch the above possibility if he has permitted them to be placed very near the ground level. The fact of the joists having been damp does not necessarily mean that rot has been set up, but it would be advisable to keep an eye upon them for a few months under the changed conditions, and if it is desired to take every precaution and ready access is possible, a wash over all the timber work with corrosive sublimate should make all secure. POUND WISE.

Septic Tank Questions.

SIR,—I am installing a small brick-built septic tank with open coke breeze filter bed to take the drainage of a small cottage, and should be glad to know of any method, chemical or otherwise, by which the bacteria action of the tank can be stimulated and assisted. The site is a confined one, and as the tank is only just over 50 ft. from the house (to the south-east of it) I am anxious to avoid any trouble with smell. The ground in which the filter bed is sunk is mostly gravel, and water soaks away fairly rapidly. I suppose that it w be an advantage to change the ashes or breeze in the filter-bed periodically—say, a year. SEPTIC TA

Fire Danger: Departure from Specificati

[REPLY TO "ARCHITECT," FEBRUARY 1

SIR,—If it is the employer who has su by the wrong doing, his remedy would be ag the contractor for breach of contract, an damages arising out of the fire, consequer the position of the beam in relation to th place being the cause thereof. When a party is injured, the contractor is liable f his own tortious acts as well as those of hi workmen, and can be sued by that third p either alone or jointly with his empl No criminal liability attaches to either the tractor or his workmen for the negli described, and which it is stated might pos have endangered the lives of occupants o building affected. But, if a fatal accident resulted from such negligence, there is no d that the contractor, or his workman, or in the circumstances described, could be ind for manslaughter. FR

Cold Bitumen Preparations.

[REPLY TO "PAVIOR," FEBRUARY 11

SIR,—These preparations are generally m of bitumen dust emulsified with some soap addition to keep them in a mastic stat laying. Before the paving has set hard, addition has to be separated out and got ri It follows then that plenty of water shoul used when spreading, so that the soap ca dissolved out and run away, leaving the bitu to harden. It is a common fault to lay preparations either without water, or with little, and I have noticed that where this been the case the paving hardens apprec after each heavy soaking with rain. EXPERIEN

Sawn Laths.

[REPLY TO "W. R. C.," FEBRUARY 11.

SIR,—This is one of those phenomena of it is extremely difficult to give a correct exp tion. I suggest, however, that in working housing schemes the principal rooms have a average length of 16 ft. into which the 4 ft works with a minimum of waste. In recent and very largely due to the small floor allowed in subsidy houses, the principal r average rather less. Is it possible that bu have formed the habit of ordering 4 ft. and that for the shorter odd lengths the 3 ft stocks are periodically absorbed in making A rapidly dwindling stock of these nat calls for a repletion order, and the accid this happening once to be general is rep again and again owing to the intensive bu all over the country. INTERES

Damp Walls.

[REPLY TO "ANXIOUS YOUNG ARCHI FEBRUARY 11.]

SIR,—The insertion of a damp course aft erection of a building is always a slow, and ticklish job; and where there are indicating heavy concentrated loads, it the more so. If it is possible to tolerate s ameliorated conditions, rather than a co cure, it would be most advisable to aim direction. If it is not a question of pro handsome decorations, I should suggest f a dry area round the building, or open down to the footings and rendering in up to just above ground level before fil again. The inside face might then be with a petrifying liquid to reduce the tro a minimum. Better advice might be giv were known to what extent dry conditi desired. SYMP

Cost of Building Work.

[REPLY TO "ESTIMATOR," FEBRUAR

SIR,—I have found that 90 per cent. a pre-war figures provides a near estimate. ticians will no doubt show that a lower tage is sufficient, but I have found genera tendering is more half-hearted than in t old days, and that it is risky to expec terms. MO

THE BUILDING TRADE

BY-LAWS RELATING TO BUILDINGS AND STREETS.—VIII

In our last article we considered the recommendations of the Committee on Building By-laws with reference to the methods by which questions relating to the interpretation of by-laws should be determined when plans are submitted and before building operations are commenced, but before leaving this subject it may be interesting to notice some of the observations of the Committee on certain of the remedies suggested to them, but rejected in the Report. These suggestions we set out in the last article.

In the first place, the Report states that a good deal of evidence had been given before the Committee as to an "appeal against by-laws," but that none of the witnesses had made it plain what was intended by this expression, that is to say, whether it meant a right to challenge a by-law as unreasonable in itself, or a right to claim that a particular plan should be relieved from the operation of a by-law on a particular occasion, by some body possessing independent status. The Committee pointed out that the two ideas differed from each other widely; the former was merely the extension of section 44 of the Town Planning Act which the Committee had recommended should be amended in this direction (see now as to the amendment of this section in section 101 of the Housing Act, 1925, Article VI), whilst the latter, which does not remove the by-law but only its operation in a particular case, goes to the root of public health administration.

In the first place, the Committee found that an appeal against by-laws" was suggested to meet the cases where a person admits that his plan contravenes the by-laws yet is of opinion that the plan is all the better for doing so; or that it is in accordance with the spirit of the by-laws, although it may not be in accordance with the letter; or that it is proved to be for the benefit of the public that the by-law should be waived, and the Committee stated that the suggested innovation would be supported by its advocates on the ground that even the best drawn by-law may not meet all circumstances. The Committee pointed out that where the infringement was of an absolutely trivial nature the local authority is not bound to take proceedings, and where the infringement is not trivial a breach of a by-law cannot be differentiated from the breach of any other law, and if a person desired to be freed from compliance the only course would be for him to contend that the by-law is unreasonable or unduly restrictive and initiate proceedings with that object; for example, under section 44 of the Housing Act it were amended as the Committee had advised it should be. But such an application to the Minister of Health to have a plan excused from compliance would be anomalous, for a by-law is as much a law as an Act of Parliament, and such an application could only be granted, if at all, upon the condition that the Ministry, if they acceded to the application, should invariably take into consideration the whole question of the continuance of any by-law or by-laws from compliance with which excusal had been granted, in order to guard against the danger of particular exemptions from a by-law which itself ought not to remain in force. Even qualified in this way the Committee considered the proposed expedient vicious in principle and not one to be adopted. The Committee then considered a variant of this proposal which we notice here because it was put forward to meet a kind of grievance that has been brought to our personal notice.

This variant was, that if the local authority and the architect or builder are agreed that a particular plan might be excused from compliance with the by-laws on the ground that, though in some respects it contravened them, it considered as a whole, it contained proposals more suitable in all the circumstances than strict conformity with the by-laws would attain, then there might be a joint reference to some body such as the Committee had proposed on matters of interpretation, and that body should have power to dispense with the provisions of the by-law in that case. An example of the kind of case the proposal was intended to meet was given in evidence viz., That where a building is to be erected in a main street the local authority and the building owner might agree that the by-law requirements as to open space in the rear might be relaxed in the particular case if more open space were given at the front for widening the street. The Committee admitted that at first sight this proposal might appear not open to objection, but they rejected it on several grounds. In the first place it was agreed by all the witnesses who advocated it (with one exception) that if the local authority refused relaxation of the provisions of the by-law, the builder, at any rate, ought to have the right of an appeal, and if an appeal was given, the Committee found that the same objection applied as they had already indicated applied to the first of the two proposals, for the appellate body would have to consider, if excusal was granted, whether the by-law could continue to stand. In the second place the Committee, taking the example given before them, which was as strong as any that could be given, pointed out that there would be an obvious temptation to the local authority, which has to take into consideration questions of traffic as well as public health, to agree, for the sake of space at the front in the interests of traffic, and possibly amenity, to a departure from the standard of air space at the rear, which in view of the statutory limitations on the by-law-making power would be none too high, and the appellate body would be placed in an invidious position. The Committee, however, apart from objections on the merits of particular cases, rejected the proposal as introducing uncertainty into administration and being contrary to the principle of section 184 of the Public Health Act, 1875.

The Report states (paragraph 52), "It is always possible for a local authority, who considers that the public interest is consistent with relaxation of the requirements of by-laws in a particular case, to propose a special exempting clause for the confirmation of the Ministry. The Ministry are generally, and in our opinion rightly, opposed to this procedure, and normally would not assent to it unless they found that the requirement of the by-laws are clearly inapplicable in a purely technical sense, or to quote Mr. Lancashire, that the by-laws 'offend against common sense' in their application to particular circumstances. If special exemptions are to be given to meet particular cases, we think it should be done by by-law, so that the provisions of section 184 shall apply and ratepayers and owners of property in the district may have an opportunity of being heard." This latter proposal we have been considering was described by the Committee as "shading off" into the suggestion of a discretionary power to relax the requirements of by-laws, and this leads us to notice some of the observations of the Committee upon discretionary powers, which certain witnesses of considerable weight recommended should be substituted wholly, or in part, in matters where by-laws are the existing method of control.

The discretionary method was adopted in the Public Health Act, 1848, but was replaced by the by-law system in the Local Government Act, 1858, and that has continued the system ever since under the succeeding statutes, and the Committee pointed out that the two systems stand at the opposite extremes among possible methods of control. A discretionary by-law, the Committee pointed out, lacks that certainty which is one of the fundamental characteristics of validity, and it fails to satisfy the provision in section 184 that the actual requirements with which the public have to comply shall be ascertainable in advance. Discretionary control, whatever form it takes, whether conferred in connection with by-laws or not, involves, the Report states, "the substitution of an unknown and essentially unknowable factor for the factor of definition in advance," and as was pointed out by the Committee there is a wide difference in the capacity of local authorities' officials, and the risk of interested action, however small that may be, cannot be ignored. The Committee also referred to the evidence of a Member of the Surveyors' Institution who had had experience in administering by-laws under three successive codes, and who said the earliest were the hardest to administer because they contained a discretion—those earlier by-laws, no doubt, being survivals from the system of 1848, which the Report elsewhere points out survived some time after 1858. Other witnesses, who favoured discretion also, the Report states, admitted that with by-laws of a modern type the usefulness of discretion would be less. We have only briefly summarised some of the reasons given by the Committee for coming to the conclusion they arrived at that no case had been made out for abandoning the existing system.

The Committee, however, guarded itself against possible misunderstanding upon two points, for the Report states they were not here prejudging the question as to whether particular topics, such as the level, width, and construction of new streets might not be removed altogether from the sphere of by-law control to discretionary control (a subject we deal with in the later articles on "Streets") and it was in connection with their observations on discretionary powers that the Committee referred to two types of by-laws, one of which they approved and the other disapproved as we mentioned in our introductory article. The Report points out that there is a common type of by-law which usually (after setting up a standard) goes on to provide that the process which the by-law deals with may be done otherwise "in a satisfactory manner." This leaves what is "satisfactory" as a question of interpretation, to be decided by the Courts at present, or, if it is adopted, under the new procedure recommended by the Committee, by the Ministry of Health, if the parties agree, and in this form of by-law there is neither discretion nor uncertainty. This clause is entirely different in legal effect from one which provides that the process may be done "in a manner satisfactory to the local authority," which obviously vests a discretion in the authority.

Before passing from this question of discretion, we may note that it was not considered by the Committee as included in their terms of reference to make any recommendations in regard to London, but as the provisions of the London Building Act were relied upon as supporting an "appeal from by-laws," the Committee considered the method of control under that Act in some detail which we cannot notice here, but we quote the following passage from the Report (paragraph 57): "It will be seen from the foregoing statement that the London system is by no means simple. It involves at least three different methods of control, viz., statutory requirements enforced by the District Surveyor and magistrates, discretion without appeal (by the District Surveyor or County Council), and discretion with appeal (by the District Surveyor, County Council, or Superintending Architect). We have said that the principle of what is loosely or vaguely called "appeal against by-laws," is sometimes said to be supported by the precedent of the existence of the London Tribunal of Appeal; but as the foregoing statement shows the overwhelming majority of matters arising in connection with buildings are outside that Tribunal's jurisdiction; the Tribunal exists to settle disputed

questions of discretion (and not even all such questions), and not matters which are governed in London by rules in the London Building Act, or would (for the most part) elsewhere be governed by by-laws. In other words, if the system of laying down rules in advance were to be supplanted by the discretionary system, the London Tribunal of Appeal would be a precedent both in the fact of its existence and the mode of its formation; but since we have rejected this solution, the fact that a Tribunal has been "set up for certain purposes of appeal in London, is no argument for giving an appeal elsewhere."

LONDON MASTER ASPHALTERS' ASSOCIATION

Annual Dinner.

The seventh annual dinner of this Association was held on Tuesday evening last, at the Restaurant Frascati, when Mr. A. J. Bevan occupied the chair. The company, numbering more than 120, included Messrs. S. D. Clements, G. Mitchell, W. T. Faldo, J. B. London, T. H. Knight, Leslie Brown, W. Sim, H. W. Barnes, F. Salter, C. Shields, A. W. Bevan, N. J. Bevan, E. A. Fabb, E. A. Sharpington, R. Fabb, R. E. Glazebrook, T. S. Darbyshire, C. F. Hollowell, Thomas Wallis, J. M. Theobald, Victor Wilkins, F. T. Dear, Capt. Quinney, A. S. Bennion, E. Vigor, T. E. Selley, W. A. K. Faldo, Malcolm Godson, Sir Harry G. Handover, and Mr. A. Hutchinson, Secretary.

The loyal toasts having been honoured,

Mr. John M. Theobald proposed the toast of "The London Master Asphalters' Association" in a characteristically humorous speech, which was greatly appreciated.

The Chairman, in reply, said the Association was forcibly imposed upon them by the Board of Trade during the war, to enable them to negotiate as a body on questions of rates of wages and conditions of labour. They had been very successful in their work and had made very substantial progress. If nothing else had been achieved the Association had served an important purpose in being the means of bringing together firms formerly known to one another by name only and thus enabling them to work for the benefit of the asphalt trade in general. The Association was representative of the whole of the asphalt trade in London, and there was a great spirit of unity among them. They had recently brought about certain reforms respecting conditions and specifications, and he hoped it would not be thought that the changes were simply in their own interests. That was not so. They were brought about to safeguard those who were forced by circumstances to adopt them and for the satisfaction of those who had to carry them out.

Mr. S. D. Clements, proposing the toast of "The Chairman," said he had been closely associated with Mr. Bevan, who was one of their earliest members. Mr. Bevan had been their hon. secretary for three years, and on the Committee for another four years, and the great experience he had gained placed him in a position to make a most excellent Chairman of their Association. There were many important matters to be dealt with in the future, and under the guidance of Mr. Bevan and his Committee they were looking forward to a very successful year.

The Chairman, in reply, said he greatly appreciated the honour they had done him in electing him their President for the present year. The speaker then referred sympathetically to the death of Mr. D. D. Cooper, one of the founders of the Association. They all felt they had lost a good friend. There were, he continued, many important decisions to be taken in the near future concerning questions of wages and conditions, and he hoped that when the Committee had arrived at their decisions and made their recommendations the general body would unanimously confirm them.

Mr. W. T. Faldo then proposed a toast which was not on the toast list, and which, he said, had never been proposed in the history of the trade before, that was "The Northern Master Asphalters' Association." The formation of this new body was a great stride in the history of the trade. Asphalters in the north had seen what London had been able to do and were preparing to follow in their footsteps. This was the first occasion that they had met convivially together, and he hoped it would not be the last. If their experience in London was of any value to their northern friends it was entirely at their service.

Captain Quinney, in reply, said that their Association was being formed in the interests of the trade in the largest sense of the word. They were suffering up north from a burst of mushroom firms. In his view no general contractor could learn as a side line and in a few months what it had taken the specialist years to acquire. The trade should be in the hands of specialists and they would oppose any concern with whose integrity they were not satisfied.

Mr. T. H. Knight, proposing the toast of "The Immediate Past-Chairman," expressed the Association's thanks for the very able way in which Mr. S. D. Clements had occupied the chair of the Association during the past year. The Association was stronger in every respect than it was at the beginning of his term of office.

Mr. S. D. Clements briefly replied.

Mr. W. T. Faldo then proposed the toast of "The Visitors," and Sir Harry G. Handover replied.

THE INSTITUTE OF BUILDERS

About a hundred architects, builders and students were present at a lecture to the Midland Branch of the Institute of Builders, delivered by Dr. Raymond Unwin, D.Tech., F.R.I.B.A., in Birmingham, on February 18. Mr. S. Guy Sapcote, F.I.O.B., a Vice-President of the Institute, occupied the chair.

Dr. Unwin, who is a member of the Building Research Board, urged the fullest possible use of the scientific knowledge available to the builder to-day. The aim of the Building Research Board was, he said, to develop a science for the building industry which should be both reliable in its information and economical in its application. In the past tradition had influenced building methods. Variation from a traditional practice was regarded as fundamentally unsound. Lately, the industry had been expanded to include a large number of new processes and materials, and it had become impossible for the builder and architect always to rely upon the materials upon which experience had taught them it was safe to rely. Variations had been made, and they had, in many cases, proved costly to the builder. The method of trial and error had been practised instead of consideration and scientific investigation of the effect of the changes. Scientific assistance in this matter of safe departure from tradition in building had been neglected. One of the aims of the Institute was to encourage a scientific appreciation of the constructional problems which confronted the builder, so that he might meet the architect and engineer upon equal terms of scientific knowledge. A vote of thanks to the lecturer was proposed by Mr. S. F. Swift, F.I.O.B., and seconded by Mr. Alexander Harvey, F.R.I.B.A.

The Chairman remarked that it was interesting to note in connection with the question of the development of scientific practice that increasing numbers of candidates were presenting themselves for the examinations of the Institute.

Teak and Maple Floors.

We understand that Messrs. R. W. Brooks & Co., Ltd., of 36, Dale-street, Liverpool, who supplied the teak and maple floors at the London Ice Rink, illustrated in our last week's issue of *The Builder*, have also a London office at 101, Hatton-garden, E.C.1.

"THE CINDERELLA OF INDUSTRY"

We have received the following communication from a correspondent signing himself "Estimating Contractor," with reference to the article which we published under this heading in our last issue :—

"May I be permitted to make a few comments on the letter of your correspondent? I take it that what he is objecting to is not deliberate and scientific cutting of prices which always occurs when trade is bad, and is due to the wish to cover establishment charges and keep staffs together, but to prices which are known to all practical men to be ridiculously below cost. The first may or may not be justified, but whether or not can only be judged by the circumstances of the firms concerned, and is obviously a private matter for themselves.

"The second can never be justified, and is a matter of concern not merely to the trade, but to the architectural profession. Why to the profession? For the simple reason that bad tendering must finally mean bad buildings. The number of men who, to gain a little extra profit, will risk their reputation and connection by being deliberately dishonest is probably comparatively few, but the number of men who will be dishonest when faced by a heavy loss or actual ruin is probably very large. It becomes, to paraphrase an old saying, a case of 'Salus Contractoris, suprema lex.' Clerks of works are now becoming more and more rare on private building work except of the largest and most important types, which is exactly where very often they are least needed, and the architect is largely dependent on the honesty of the contractor.

"Architects may very often congratulate themselves on receiving low tenders, or getting a 'Rolls Royce' for the cost of a 'Ford.' Are they so sure that sometimes they do not get a Ford after all—very nicely painted and with all the frills, but essentially a Ford? To the trade the importance of the matter is obvious. The evil, in fact, is acknowledged, but what of the remedy? It is doubtful if there is any, only as after the War, the slow attrition of the Bankruptcy Court. It may be of value, however, to consider the causes, or probable causes. Ignorance and folly are not sufficient. It is commonplace that fools rush in where angels fear to tread, but how is it that they are allowed to rush in in an important business and at the risk of large amounts of capital? It is a phenomenon which would hardly be met with in any other trade of similar importance. It is, moreover, largely a post-war phenomenon, and is not confined, as your correspondent says to small firms. There was a very glaring case of a large firm who recently got in difficulties after taking work at prices which everyone knew could not pay.

"Is not the cause found in the fact that (a) men who were purely financiers, and had no practical knowledge, came into the trade after the War, thinking that there would be large profits in it, and employed paid estimators, whose work they were totally unable to check, and (b) that a number of smaller men, either again financiers or jobbing builders, also came into the trade with the same idea? They were again dependent either on paid estimators, who they could not control (for a man may be a perfectly successful jobbing builder and know nothing of competitive estimating), or on outside surveyors.

"In both cases, whether good or bad estimators were obtained was largely a matter of luck, since the principals could not check their capacity, and since to a man ignorant of practical work, an estimate who does not get a job is not much good there is probably a nasty tendency in bad times to get work at any price and, since it may take from eighteen months to two years to find out whether the work has paid, so postpone dismissal for that period at least

probably the reason why as soon as gets slack, as at the moment, some prices become simply appalling.

e position of the firms who go to the surveyor is little better. These men ually in a very small way of business veyors, for the large and important ill usually not be bothered with esti- for builders. Now a surveyor can arn prices from builders' bills, and long and very varied experience will im, and even then he can never know h as a good estimator, for the simple that pricing can only be perfectly by collecting data actually on the This being so, we have the absurd n of the pupil turning teacher, and e pupils only the least efficient doing ecently one of these surveyors adver- hat he obtained 80 per cent. of the he tendered for, and considered this ntly as a recommendation. Now, two estimators, both equally skilled, for the same job, one is certain to er than the other, if only by a few for estimating is not and cannot be ct science, it is fair to say that one of four taken on the average is the hat any estimator can expect to get, at is probably too high. A man who per cent. must certainly have been far too low.

ch, then, are possibly the causes. is the remedy, or is there one other he economic? It is doubtful, but I suggest that the Institute of Builders circularise not merely their members, builders, pointing out the extreme nce of estimating, and that if the price is wrong, nothing is likely to t, and that estimating is not a matter nation or inspiration, but, like any technical knowledge, can only be d by long experience, application and ork, and not all of those who say, ator, estimator,' will lead their em- into a material kingdom of heaven. ay seem an absurd suggestion, and other trade would be, but it must be ered that while with some existing he question as to the absurdity of rices may be a matter of opinion, it en proved beyond any controversy in e of several who have gone into bank- since the War. It would take up too f your space to give instances, and I at this letter is already too long, but tance may be given of the attitude d which does exist, in the question master builder to another, 'What is ce of brickwork in London to-day?' en asked what part of London, what ions of mortar, and whether in lime ent, and what kind of bricks, did not o think it mattered. 'Just ordinary ork, you know!' One almost comes conclusion that the correct *metier* for ontractors to-day would be for one small and select band, to build asylums for the remainder to live in. e other suggestion I would make is e Institute should establish evening ing classes in different centres, quite om the classes for their degree. That hould be free, and open to all bona- lders and estimators, the teachers to al practical estimators. The teachers, se, would have to be paid a fee.

may appear a revolutionary sugges- at the builders should try to educate ivals, but what is the position at ? We are liable to be, and are t by certain firms by anything from cent. to 20 per cent., and the mere at this usually lands those who do arey Street is of no good to us. If arnt to estimate they might still t us by 1 per cent. or 2 per cent., the law of averages we should some- eat them. Both parties would then at present the only one who benefits building owner, and trustees in tcy. Moreover, no man lives for alone, and as the professions benefit embers collectively by taking care y are competent, so should we. In- competent builders are in the long run bad for the whole trade, and bring it into general disrepute, and the financial stress which bad estimating is bound to produce causes weakness to the whole body in all negotiations, no matter with whom they may be.

"I am aware that some of the technical institutes teach estimating, but as their principals and governors have frequently no practical knowledge, there is no guarantee that they will select competent teachers. I trust that you will be able to publish this letter, and must apologise for its length, but the subject is of considerable importance."

THE WEEK IN PARLIAMENT

WESTMINSTER, *Wednesday.*

THE Bill to remove the Covent Garden Market to the site of the old Foundling Hospital in Bloomsbury has been withdrawn.

Open Spaces.

Mr. Pethick-Lawrence asked the Minister of Health whether he contemplated taking any action, by introducing legislation or otherwise, to preserve the open spaces of London and to make them available for public use.

Mr. Chamberlain said that no legislation was at present in contemplation, but the matter was receiving his consideration and he proposed to communicate with the London County Council.

Cross-River Traffic Commission.

Mr. Baldwin, the Prime Minister, replying to questions, said that the report of the Royal Commission on Cross-River Traffic in London was still under consideration by the Government, and he could make no statement. He had received a request from the L.C.C. that a deputation might wait on him to discuss the matter, and he hoped that that deputation would be received at an early date.

Ancient Buildings.

On a discussion on Revenue Buildings, Sir H. Slesser expressed the fear that an ill-considered demand for economy would imperil irreplaceable ancient buildings and monuments.

Capt. Hacking, however, reassured Sir H. Slesser by stating that there was no saving at all on the maintenance and repairs of ancient monuments and historic buildings.

Unemployment.

Mr. Betterton informed Mr. Stephen that the percentage of unemployment among building trade workers on March 22, 1926, was 8.6; on June 21, 9.6; on September 20, 10.8; and on December 20, 13.5.

In answer to Lord Sandon, Mr. Betterton said that the following table gave an industrial analysis of the vacancies in certain industries filled by persons 18 years of age and over through the instrumentality of Ministry of Labour Employment Exchanges during 1925 and 1926:—

Year.	*Men.*	*Women.*	*Total Adults*
Brick, Tile, &c., Making.			
1925	950 ..	327 ..	1,277
1926	1,546 ..	463 ..	2,009
Pottery, Earthenware, &c., Glass Trades.			
1925	20,364 ..	24,293 ..	44,657
1926	10,230 ..	11,094 ..	21,324
Sawmilling, Furniture and Woodwork.			
1925	7,307 ..	2,594 ..	9,901
1926	7,989 ..	2,505 ..	10,494
Building and Construction of Works.			
1925	251,011 ..	56 ..	251,067
1926	173,822 ..	93 ..	173,915
General Labourers.			
1925	114,226 ..	3,275 ..	117,501
1926	84,913 ..	2,485 ..	87,398

Mr. Betterton informed Mr. T. Williams that on January 24, 1927, there were 10,038 carpenters and joiners, 4,807 bricklayers, 874 plasterers, and 2,894 plumbers classified as belonging to the building industry recorded as unemployed in Great Britain. The corresponding figures for January 25, 1926, were 7,525 carpenters and joiners, 2,953 bricklayers, 553 plasterers, and 2,167 plumbers.

Timber Houses.

Mr. Chamberlain informed Mr. Day that twenty-three houses of timber construction had so far been completed by the London County Council, and the subsidy in respect of those houses to be included in the payments to the Council by the State was £9 per house for 40 years. The Council had under construction 304 additional houses of this type.

Slum Clearances.

Mr. Chamberlain informed Mr. T. Thomson that the position in regard to the clearance of slum areas in England and Wales was as follows:—Ninety-three schemes relating to 71 local authorities had been confirmed since 1919. On January 1 last tenders had been approved or loans sanctioned in respect of 74 schemes for the erection of new houses in order to provide accommodation for the displaced population and to enable clearances of the areas to be commenced. In the case of 72 schemes the areas had been wholly or partially acquired, and clearance was in progress in the case of 56 schemes.

Open Spaces.

In reply to Sir James Remnant, who asked if he would consider the advisability of appointing a committee to consider how the squares and other open spaces in London could be preserved for the public use, Mr. Chamberlain said that he understood that the question of the London squares was under the consideration of the London County Council, with whom he was in communication. At the moment he did not contemplate the establishment of any fresh body of the kind suggested, but the matter would continue to have his personal attention.

Rent Restrictions Act.

Mr. Chamberlain informed Mr. Mosley that the question of the continuance of the increase of Rent and Mortgage Interest (Restrictions) Act, which continued in force in England and Wales till December 25, 1927, and in Scotland till May 28, 1928, was under consideration; but he was not at present able to make any announcement on the subject.

Backward Authorities.

Mr. Chamberlain informed Mr. Hayes that the number of local authorities in England and Wales who had not promoted schemes for the provision of houses either by themselves or by private enterprise, under the Housing, &c., Act, 1923, or the Housing (Financial Provisions) Act, 1924, was 158. Of those authorities 58 carried out a housing scheme under the Housing, Town Planning, &c., Act, 1919.

Direct Labour.

Mr. Chamberlain informed Mr. Mackinder that 83 local authorities had so far undertaken housing schemes by direct labour in England and Wales under the Housing Acts of 1923 and 1924. 10,587 non-parlour and 4,002 parlour houses were included in those schemes. The average estimated costs of the houses prior to commencement, excluding the cost of land, development, &c., were £422 for a non-parlour and £469 for a parlour house.

Lead Poisoning.

Major Hills asked the Home Secretary how many cases of lead poisoning in the potteries occurred in factories using low-solubility glazes since the regulations of 1913, which gave special exemption to such factories?

Sir W. Joynson-Hicks said that during the eleven years, 1916-1926, there were 67 such cases out of a total of 351, but in 60 of these there had been previous employment, often for many years, in factories using raw lead glazes. The incidence of lead poisoning in potteries of this class was to be the subject of a special investigation by one of the medical inspectors, and the investigation would be proceeded with at an early date.

BRITISH INDUSTRIES FAIR, BIRMINGHAM

THE Birmingham section of the British Industries Fair (the London section is now being held at the White City) opened at Castle Bromwich on Monday last, and will remain open until March 4.

The schedule of exhibits contains eleven groups of industries, including: Construction, Building and Decoration (50 stands); Power, Lighting, Heating, Cooking and Ventilating (114 stands); Brassfoundry, Hardware and Ironmongery (167 stands); Metals (31 stands); and Engineering (plus 35 firms in the Steam-power Section) (134 stands).

There is an excellent display of exhibits having a special interest for architects and builders, a notable section being a representative collection of mantelpieces, chimney-pieces, tile hearths and surrounds, and grates and interiors. In each of these departments many of the leading firms are represented. The models vary from ornate mantelpieces suitable for the country mansion or large suburban house to small and inexpensive fitments required in a subsidy cottage. Builders' hardware is another attractive feature of the exhibition, including up-to-date models in grates and cooking and heating equipment by gas, electricity, oil and coal fires. Non-ferrous metals are exhibited in great variety, while brass and copper tubes and pressings and stampings are also on view, together with stainless steel for a variety of purposes. The engineering group includes a comprehensive electrical section, and there is an interesting mechanical display, including oil and gas engines, woodworking machinery, etc. An important feature of the steam-power section is a modern boiler-house—a co-operative exhibit for which over thirty of the leading engineering firms have made themselves responsible. The object of the scheme is to enable industrialists to visualise a thoroughly modern boiler-house on practical lines, with each component part in its correct position. Many of these exhibits, as well as a large number of others, are to be seen in operation.

We give below brief notices of some of the more notable exhibits having an architectural or a building interest.

Allen-Liversidge, Ltd., Building B, Stand 43, Block J.

This company specialises in the manufacture and supply of all kinds of welding equipment and accessories, emergency lighting equipment, and lamps for all purposes. They are also carbide of calcium merchants. There is much on the stand to interest the builder and contractor. Where oxy-acetylene welding or metal-cutting are required, the A-L dissolved acetylene plant is appropriate. An additional advantage of the use of dissolved acetylene lies in the fact that an existing welding and cutting plant, when not required for such service, can be put to efficient and economical use for soldering, brazing, paint-burning and cable-jointing by the A-L air-acetylene system. Of emergency lighting equipment for builders and contractors, a wide range of choice is shown.

Automatic Disinfectants Co., Stafford House, Norfolk street, Strand, London, W.C.2, Building C, Stand 110, Block O.

A neat, simple, efficient and economical appliance for automatically disinfecting the lavatory pan after every flush is here shown. The disinfectant used takes the form of solid cartridges, a portion being dissolved by water from the flush which enters the "Autoflux," and is held there until the flush is over. There is no waste of disinfectant and neither labour nor supervision, it is claimed, is necessary.

D. Anderson & Son, Ltd., Park Road Works, Stretford, Manchester, Building B, Stand 133, Block D2.

This stand has as its central feature a model of a "Belfast" lattice girder roof covered with "Rok" roofing, showing the construction in full detail. Actual rolls of "Rok" roofing and the new mineral-surfaced "Rok," Sanodor odourless felt for roof lining, and Stoniflex roofing felt are on view. "Sidol" wood preservative, "Siderosthen" anti-corrosive paint and "Bondex" plastic compound for repairing leaky roofs are also shown. A liberal supply of samples is provided.

Bath Artcraft, Ltd., Lower Bristol-road, Bath, and 33-34, Great Pulteney-street, Regent-street, London, W.1, Building A, Stand 153, Block P1.

This firm is exhibiting, in conjunction with Messrs. Carter & Co., mantelpieces and overmantels of wood, completely fitted up with tile surrounds. Hearths and interiors are shown in attractive models. The stand itself is of special interest on account of its simple architectural character and the careful thought that is displayed in the proportion of the receding planes of the corner pillars and fascias. The exterior of the structure is painted in modern style with interesting effect. Some few of the mantelpieces are designed in the traditional styles of English periods of interior decoration and are excellent of their type. Others—and to these we would call special attention—are attractively modern in style.

A. Bell & Co., Ltd., and Bell Range & Foundry Co., Kingswell Works, Northampton, Building A, Stands 115 and 116, Block M.

Complete tile fireplaces are here shown in an attractive range of colours and fitted with "Bell" fires. The exhibit also includes a new "Bell" faience gas fire with no visible metal work whatever. This can be supplied in many different colours. A new electric fire is also an interesting feature of this exhibit.

The British Vacuum Cleaner & Engineering Co., Ltd., Parsons Green-lane, London, S.W.6, Building B, Stand 28, Block A2.

The use of vacuum cleaners has now become standard practice to a very large extent, and the four classes of apparatus exhibited on this stand show some of the varieties which are now made by the originators of this cleanly and efficient instrument. These are: (1) "Turbinet" electric cleaner, for domestic use primarily; (2) the "Goblin" non-electric suction sweeper; (3) the "Brivac" non-electric general purpose vacuum cleaner; (4) the "Turbinet" electric cleaners, Nos. 2, 3 and 4, which are of larger capacity than the model mentioned above, and are for heavier duty, such as showrooms, cinemas, factories, etc.

O. Bruster & Richardson, 4, Lloyd's-avenue, London, E.C.3., Building B, Stand 153, Block E3.

A "New Junior Glow Worm" coke boiler, and a "Glow Worm" open coke fire invented by Dr. J. S. Owens, are here shown in use, also a "Glow Worm" gas fire mantel. The "Glow Worm" open coke fire will, it is claimed, consume coke, soft coal, lignite, anthracite, wood and all kitchen and garden rubbish, and give all the while a bright radiant fire. Apropos of these exhibits, we are informed that conditions in the industrial market are now such as to enable the prices of cast and wrought iron boilers to be reduced to the prices prevailing prior to December 1, 1926.

Candy & Co., Ltd., Heathfield, near Newton Abbot, Devon, Building A, Stands 29 and 30, Block D1.

This firm, the manufacturers of the well-known "Devon" fire, have an attractive display of fires, and of faience and tile fireplace fitments in a large variety of styles and colourings as well as glazed tiles generally, both slabbed and un-slabbed. Messrs. Candy & Co. are also the manufacturers of "Westcontree Ware" in an extensive range of shapes, with speciality glazed effects.

Carron Company, Carron, Stirlingshire, Building A, Stand 128, Block N.

This exhibit comprises ranges, fire-grates, combination grates, baths, electric and gas cooking and heating appliances, etc. ... ment on the stand is a display of the ... pany's rustless firegrates. These grate... all the appearance of silver with the uti... steel, and invest the fireplace with char... brightness. They have the further adv... of requiring the minimum of maintenan... cleaning, and being unaffected by climat... ditions are specially suitable for seaside ... dences. Other firegrates on view co... mantel registers, including a few of the ... known "Glen" series fitted with barle... as well as dog grates in armour bright. ... cial mention must be made of the tele... kiosk in cast-iron, designed by Sir Gile... bert Scott, R.A., for H.M. Governmen... manufactured by the company.

Carter & Co., Ltd., Encaustic Tile W... Poole, Dorset, Building A, Stand ... Block P1.

On this stand is shown a range of ... fireplaces of distinctive and individual ... and finish. Some are shown with the f... the hearth and some with raised metal g... some with simple slabbed surrounds, ... with slabbed surrounds and mantels. ... attractive exhibits include briquette fire... for building in position, faience firepla... large blocks, slabbed tile and faience ... as well as some interesting suggestion... wall tiling.

Cochran & Co. (Annan), Ltd., Annan... land, Building B, Stand 246, Block ...

This firm exhibit under steam in the s... power section one of their smaller size ... vertical boilers, arranged for oil firing. ... size, 4ft. 9in. diameter by 11ft. 9in. hi... 200 sq. ft. heating surface, is capable ... evaporation under oil-firing condition... 1,680lbs. per hour, from, and at, 212 de... The oil firing gear is by Messrs. White... jectors, Ltd., Manchester, the feed-pum... Messrs. G. & J. Weir, Ltd., Glasgow ... the boiler is lagged by Messrs. Cape As... Co., Ltd.

Elsan Manufacturing Co., 34-35, High... born, London, W.C.1, Building A, ... 148, Block P.

The modern hygienic sanitary fi... shown on this stand include the "E... chemical closets, which, it is claimed, n... public sewers or water-flush and repla... septic system and cesspool. They requ... emptying. They have been exte... adopted for homes, bungalows, factories ... lions, sports grounds, caravans, farms, ... and plantations. The "Bristol" s... products are also exhibited.

The General Electric Co., Ltd., ... House, Kingsway, London, W.C.2, ... ing C, Stands 1, 2 and 3, Block A.

On these stands is exhibited a repr... tion of the complete range of electrical ... ratus, manufactured throughout in ... Britain in specialised factories design... the production of a particular class of ... ratus, such as Osram lamps and valves ... ton plant and switchgear, Magnet ho... appliances, Gecophone wireless app... Pirelli-General wires and cables, Fr... Chalmers turbines and mining mac... Peel-Conner telephones and Express lif...

Interoven Stove Co., Ltd., 156, ... Cross-road, London, W.C.2, Build... Stand 67, Block H.

"Interoven" stoves and "Supe... oven" stoves are shown on this ... and attendants give cooking demonst... daily. Valuable features of the stove... large oven and a roomy hotplate for ... saucepans. The high-pressure boiler ... able of giving a plentiful supply of ho... for all domestic purposes.

Jenkins Bros., Ltd., 6, Great Queen ... Kingsway, London, W.C.2. Head ... and works: 103, St. Remi Street, M... Canada. Building D, Stand 252, B...

This firm exhibits a varied selection ... well-known products, as follow: Gu... renewable disc globe valves; iron body ... able disc globe valves; check valves ...

ing valves; rapid-action valves; iron body
k valves, radiator valves, air valves;
n traps; air guns; full-way gate valves
h gun-metal and iron body); and re-
ding valves for high pressures.

ard Johnson, Clapham & Morris, Ltd., Cement House, Trafford Park, Manchester, ilding A, Stand 17, Block C.

ns firm exhibits a number of products of est to builders, contractors, and others, ding the "Jacem" brand galvanised netting in all gauges, meshes and widths; en wire in all metals and in all meshes; er wire, bright steel wire, and wire work all industries. Window and machine ds are also shown, together with miners' y lamps. The firm, as is well known, e a speciality of reinforcements, and they de in their display the wire road rein- ment, the "Brictor" reinforcement, and attice and "Keedon" concrete reinforce- , all made at their Newton Heath Works, chester.

A. Lister & Co., Ltd., Dursley, Glos., ilding C, Stand 74, Block O.

e exhibit of this firm consists of one . 2 B.H.P. self-contained radiator- d lighting plant on base, complete with chboard, 1.5 K.W. 3 B.H.P. self-con- d radiator-cooled lighting plant on base, lete with switchboard, and one Lister .

hall, Sons & Co., Ltd., Britannia Iron- rks, Gainsborough, Lincs., Building BB, nd 209, Block E.

this stand power users will find an ex- deserving of close attention. It consists o oil engines, the details of which are as :—One 16 B.H.P. portable oil engine, ontal type, with atmospheric cooler and lriven centrifugal circulating pump, com- ed air receiver and self-starting appa- . One 60 B.H.P. class "SV2" vertical ngine, semi-Diesel, valveless two-stroke for industrial, electrical pumping and al power purposes.

& Co., Ltd., Jackfield, Shropshire, Build- A, Stand 123, Block M2.

this stand there is a comprehensive dis- of tiles for a variety of purposes, includ- walls, floors and fireplaces. Fireplace unds are obtainable in varied forms and rs and are easily kept clean and fresh, olours being permanent.

on, Hollins & Co., Patent Tile Works, ke-on-Trent, Building A, Stand 48, ck F2.

es of many varieties and finishes and wide range of uses are here shown. al mention should be made of the nton" tiles (claimed to be suitable for class of work), "Encaustic" floor glazed and enamelled tiles, and fireplace complete in a wide range of designs and rings. The firm are also the manufac- s of "Astra" ware in attractive shapes finishes. The mantels on view are by Regent Woodcraft Co., Great Lister t, Birmingham.

(Staffordshire) Refining Co., Ltd., 47, toria-street, London, S.W.1, Building Stand 196, Block W.

this exhibit there are technical and other nstrations of the bituminous paint— noid, which is made in various grades, g heat, water, acid, and general weather ance qualities. Other notable exhibits fectal wood preservative and insecticide a high tar acid content; Brunner-Mond's silicate of soda for case hardening and proofing cement concrete, and joint box attery sealing compounds for electrical ations.

rave & Co., Ltd., St. Ann's Iron Works. fast, Building B, Stand 233, Block L4.

this stand the "Centigrad" patent dust l unit for the removal and collection of from all manufacturing processes is in operation. Other interesting ex- are the "Zephyr" cooler for providing a current of cool air where workers are exposed to excessive heat; a range of cast-iron cased fans of various types; an induced draught fan, with direct coupled engine, and stoves for works and general heating.

Parker, Winder & Achurch, Ltd., Broad-street, Birmingham; and **The Eagle Range & Grate Co.**, Birmingham, Building A, Stands 71-76, Block H2.

"Eagle" patent combination grates in various sizes are exhibited on this stand, showing up-to-date labour saving methods of heating and cooking, combined with economy and convenience, kitchen and dining-room grates, and a combined two-room grate. The advantages claimed for the grate are its suitability for roasting or baking, with fall-down door and spring supports, its boiling hot-plate for saucepans, and boiler for bath supply. Its flues are self-contained, and there is one flue only to work oven, boiler and hot plate. The oven flue being self-contained the brickwork required in fixing is reduced to a minimum.

Josiah Parkes & Sons, Ltd., Union Works, Willenhall, Building A, Stand 130, Block N1.

Builders' merchants will be especially interested in the comprehensive display of locks, latches and builders' hardware which is to be found on this stand. All the articles exhibited are branded with the well-known trade mark "Union."

The Rawlplug Co., Ltd., Rawlplug House, Cromwell-road, London, S.W.7, Building A, Stand 81, Block J.

A variety of labour-saving devices are here shown, the most important of which is the Rawlplug, which enables articles of almost any weight to be fixed in any material with a minimum of time, labour and cost. Rawlplug bolt anchors are for very heavy fixing work. Rawlplug bathroom fittings in the new super aluminium, "Durium," are definite labour-saving devices, a rub over with a dry cloth being all that is necessary to keep them bright. Other exhibits are "Durofix" waterproof adhesive, "Durolustre" cellulose lacquer which, it is claimed, if applied to bright metals will keep them bright indefinitely; and "Liquid Porcelain," a hard non-chippable cellulose enamel which, if applied to metals, wood, etc., will impart an attractive porcelain-like finish.

Ruston & Hornsby, Ltd., Sheaf Iron Works, Lincoln. Birmingham address: Chamber of Commerce Buildings, 95, New-street, Building B, Stand 4, Block A.

All users of power will be interested in this exhibit, which includes the Ruston cold starting horizontal oil engine of 130 B.H.P. running. Horizontal engines of this type are made in sizes from 16-340 B.H.P. The engines run—without alteration—on a wide range of fuel oils, including the cheapest oils such as fuel of .95 specific gravity. Low consumption is guaranteed by the makers. The engines will start from cold under any conditions. The 3-cylinder vertical oil engine of 45 B.H.P. has the same general features as described above. Vertical engines are supplied in sizes from 15-1,000 B.H.P.

J. Sagar & Co., Ltd., Manufacturers of Woodworking Machinery, Canal Works, Halifax, Birmingham: Guildhall Buildings, 12, Navigation-street; and at London, Building B, Stand 105, Block Y.

This exhibit consists of a representative selection of modern woodworking machinery, especially suitable for builders, contractors, and others who require the costs of woodworking operations to be reduced to a minimum. The exhibit will well repay close attention for the possibilities which it reveals of economical and at the same time efficient production.

Scaffolding (Gt. Britain), Ltd., 252, High-gate-road, Birmingham. Registered offices: 43, Lansdowne-road, Stockwell, London, S.W.8; also at Glasgow, Manchester and Bristol, Building A, Stand 197, Block W.

This firm, the manufacturers and patentees of tubular scaffolding, "Scaffixer" scaffold ties, and "Conforms" stamped steel shuttering, give demonstrations daily showing the advantages of the up-to-date use of patent scaffoldings, etc. Photographs of contracts executed are also on view. The firm are sole concessionaires for patent heavy and light suspended scaffolds, which are being increasingly used in this country.

Samuel Smith & Sons, Ltd., Beehive Foundry, Smethwick, and 41, Colmore-row, Birmingham, Building A, Stand 201, Block Y.

This firm exhibits a comprehensive display of grates, etc., from the small barless grate to the latest high-class "Foresight" combination ranges. Particular attention is called to the "Foresight" junior combination stove, as being one of the latest and most efficient in the portable stove class.

Smith & Wellstood, Ltd., Bonnybridge, Stirlingshire, Scotland, Building A, Stand 32, Block E.

Here is shown a useful display of cooking and other apparatus, including the patent "Wellstood" encased flue smoke-consuming ranges, patent "Esse" stoves and independent boilers for anthracite or coke, and with closed or open fires, "Columbian" cookers, for anthracite or ordinary coal, designed for the home and the foreign market, in majolica enamelled, and other labour-saving surface finishes. Other notable exhibits are the "New Leader" portable ranges, with patent removable oven, "Cow" brand portable boilers, with patent non-drip steam escape, and "Kudos" housing scheme grates.

Tangyes Limited, Cornwall Works, Birmingham, Building B, Stand 113, Block R.

Builders and contractors and other power users will be interested in this exhibit, which consists of one 47 B.H.P. heavy oil engine, one 20 B.H.P. fuel oil engine, two "Tan-Gyro" centrifugal pumps, six new design vertical single ram pumps, one 5-in. six-stage turbine pump, one 4 in. by 6 in. vertical treble ram pump, one duplex boiler feeder, and one 40-ton hydraulic press. Other notable exhibits shown on the stand are pulley blocks, lifting jacks, malleable castings, etc.

The Tilley Lamp Co., Brent Works, Brent-street, Hendon, N.W.4, Building AA, Stand 66, Block P.

At this stand is shown a selection of oil vapour lamps for domestic, factory, stable, railway and other kinds of artificial lighting, particularly suitable for country districts. The lamps have "Tilley" patent vapourisers, clearing needle, unleakable cock, indicator and heat-resisting globes, also lighters using paraffin if desired. Oil vapour stoves have a patent vapouriser, needle for adjusting the size of flame and a clearing nipple.

Triplex Foundry, Ltd., Great Bridge, Staffs, Building A, Stand 159, Block Q.

This firm shows a working exhibition of the well-known "Triplex" and "Workwell" grates. Over 40,000 of these grates, we learn, have now been fitted under guarantees of efficiency. Large numbers of them have been used by Birmingham and other Corporations. The grates are strongly and entirely constructed of cast iron, and are sent out with all self-contained flues.

Wadkin & Co., Green Lane Works, Leicester, Building C, Stands 106 and 107, Block D1.

This exhibit comprises sawing machinery, which includes band sawing as well as circular sawing machinery suitable for all classes of the woodworking industry. There are planing machines for hand surfacing and for thicknessing to size by power feed, and mortising, boring, and recessing machines which are adaptable and specially suitable for the building, joinery and cabinet trades, and all trades where woodwork requires machining operations.

RATES OF WAGES IN THE BUILDING TRADE

Every endeavour is made to ensure accuracy, but we cannot be responsible for errors.

ESTIMATING ON RIGHT LINES

Everyone whose business it is to quote for building work should master the principles upon which estimating is based. These principles are clearly explained and illustrated in

'HOW TO ESTIMATE'

by J. T. REA,

a unique and invaluable work which is not excelled in thoroughness or in scope by any similar book known.

Fourth edition (now ready). 540 pages. Price 15s. net (by post 15s. 9d.). Containing thousands of prices and hundreds of examples of analysis, showing how a builder can make up rates for himself. In view of the difficulty of fixing standard prices under present conditions, the author has included an important series of Adaptation Tables and Percentages (corrected to February, 1926), *which show how rates may be adjusted to meet variations at any time.*

Before purchasing any other book on this vitally important subject, you are invited to inspect this—the standard work which is in use by over 30,000 builders.

A COPY WILL BE SENT BY RETURN, AND YOUR REMITTANCE REFUNDED IF THE BOOK DOES NOT SATISFY YOUR REQUIREMENTS.

Builder's Estate.

Mr. James William Woodhall, Ramsgate, Kent, retired builder, who, as Baron of the Cinque Ports, had the privilege of bearing the Royal Canopy at the Coronation of King George, left £10,609.

Mr. Charles Wood Carrack, of Johnson-street, Woodhouse, Leeds, bricklayer (net personalty, £4,083) left £5,305.

Cheaper Houses.

Official figures are available as to the average contracts for building houses let by local authorities during November. These were £422 each for 3,767 non-parlour houses and £502 each for 834 parlour houses. As compared with October this was a drop of £31 in houses without a parlour, and of £20 in houses with a parlour. There are no signs of any reduction in the progress of house building. Up to the begininng of last month there were completed in this country 723 854 houses. In addition there are 50,740 in course of construct on by local authorities under the Chamberlain Act, and 50,302 under the Wheatley Act.

Untidy Streets.

On this subject, Mr. Harold Speed writes to the *Times* as follows: "I have just walked down Bond-street at seven in the evening, and heaped in front of the doors right on the footpath was rubbish of every description—some in filthy dustbins (many without lids), some in old pails, and much just thrown down in heaps and left to blow about the street. To add still further to the mess, a band of enterprising children were systematically rifling the bins, turning out their contents on to the path in search of plunder, and not troubling to put back what they did not want. If in the present state of our town civilisation it is still necessary for us to put our rubbish out at the front door in our chief streets, might I suggest that tidily designed bins of standard pattern and made to lock up be made obligatory, the dustman having a key that would open them? And that it be a punishable offence to leave heaps of rubbish on the paths not locked in such bins, as it is at present a punishable offence to leave a motor-car in the road? Is this too Utopian to hope for?"

THE SCOTTISH BUILDE

HOUSING PROGRESS IN SCOTLAND

The following figures show the progress that has been made in State-aided housing schemes in Scotland to January 31, 1927:—

	Completed.	*Under Construction.*
1919 Act	25,528	22
Private Subsidy Schemes (1919 Additional Powers Act)	2,324	—

NEW BUILDINGS IN SCOTLAND

Kirkintilloch.—HOUSES.—The Town Council have accepted tenders for the erection of 72 houses at East High-street and Braehead. The total tenders come to £25,323 18s. 9d., and the Council has agreed to borrow the sum of £32,400.

Glasgow.—EXTENSION.—The Governors of the Art School for Glasgow and the West of Scotland have purchased a portion of the property opposite the present building, with a view to extensions. Plans for the proposed extension have been prepared by Messrs. John Keppie & Henderson, which are estimated at £35,000.

Aberdeen.—BUILDINGS.—Offers for the contracts for the work of constructing the buildings proposed to be erected at the Sea Beach under the scheme for improving the sea front have been considered by the Links and Parks Committee of the Town Council. The Committee have accepted contracts amounting to £53,000.

All the contractors have not yet been deci upon.

Greenock.—EXTENSION.—It is hoped t sufficient funds will be on hand shortly to en the Committee of the McLean Museum to ceed with the extension of the Museum and provision of an art gallery.

Edinburgh.—BUILDINGS.—The Dean of G Court has passed the following: Mr. J. Millar, double villa and two garages, at Ravel Dykes; and Messrs. J. Livingstone & fourteen bungalows, at Moredun Mains, merton.

East Lothian.—HOSPITAL.—A public mee has been held to consider the proposal to es lish a cottage hospital for the western por of East Lothian.

Ormiston.—SCHOOL.—The East Loth Education Authority are to select another for a new school at Ormiston.

Scottish Regional Planning.

At a conference of representatives of authorities throughout Scotland, land-own industrialists, and of various bodies, rece held in Glasgow, the constitution and by-l of the Regional Planning Advisory Council Scotland were approved.

The Planning of New Cities.

Under the auspices of the Glasgow S Abolition League and Garden City Lea a lecture was given in the M'Lellan Gall by Mr. A. T. Pike, Secretary of the Ga Cities and Town Planning Association. It estimated, he said, that 240 million jour per annum, at a cost of 30 million pou were made by people who worked in the ce of London and lived some distance a That same economic waste was going on in e big city. The statistics published by he authorities showed that the present structu towns was having a very serious effect child life. The question of education could be separated from those of overcrowding city growth. There was a recognition amon parties that garden cities must be the m by which the future of the country was t developed.

BUILDING TRADE WAGES IN SCOTLAND.

THE following are the present rates of wages in the building trade in the principal towns Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for err that may occur:—

	Masons.	Bricklayers.	Carpenters, Joiners.	Plasterers.	Slaters.	Plumbers.	Painters.	Labourers—Masons', Bricklayers' Plasterers'

These prices apply to *new buildings only*. They cover superintendence by foreman and carry a profit of 10% on the prime cost without establishment charges. A percentage of 1¼ should be added for Employers' Liability and National Health and Unemployment Acts and from 1s. 6d. per £100 for Fire Insurance. The whole of the information given on this page is copyright.

TRADE NEWS

Tubular Steel Scaffolding.

We understand that Messrs. Stephens & Carter, Ltd., of Paddington-green, have now entered the field for tubular steel scaffolding, and we are informed that they have done several big jobs, and that they have a good deal of that type of work now in hand. Their stock of steel tubing and the necessary coupling units is large and is kept in such a way that any length is easily accessible at a moment's notice. Such scaffolding is also let out on hire.

"The Sprinkler Bulletin."

We have received the current copy of Messrs. Mather & Platt's, Ltd., of 14, Great Smith-street, S.W.1, "Sprinkler Bulletin." This little publication gives a very interesting account of the growth of the Co-operative movement. The manufacture and warehousing of foodstuffs are known to be the most hazardous of fire risks, and it comes as no surprise to learn that to-day there are thirty-three large retail Co-operative shops and about twenty-three general warehouses protected by the well-known "Grinnell" sprinkling system.

Boilers and Radiators.

We have received copies of The National Radiator Company's, Ltd., of Hull, latest price lists, from which we note that appreciable reductions have been made in their "Ideal" boilers and radiators and "Britannia" boilers. These lists will gladly be sent upon request to the makers, as will copies of their new show bills which have just been brought out.

Rustproof Sash-Chains.

Messrs. Rhodes Chains, Ltd., of 26, Charing Cross-road, W.C.2, have issued their new 1927 catalogue, giving fullest details of their rust-proof sash-chains, patent sleeve and ball-bearing pulleys and axle pulleys of all types and for all purposes. We understand that every sash-chain carries Rhodes' guarantee of lifelong service and satisfaction, and that this firm are to extend their system of sash-hanging service holding in the London area and districts to the chief towns in the country.

Doors of Quality.

The Woco Door Company, of Dashwood House, E.C.2, the makers of the well-known "Laminex" doors, have issued a showcard of very attractive design and colouring. This metal-mounted, washable-surface showcard, very suitable for window display, may be obtained upon application.

Glazed Bricks.

We have received from Messrs. Shaw's Glazed Brick Co., Ltd., of Darwen, a copy of their new price list, which will be forwarded upon application, together with any samples desired of their leadless glazed bricks, patent partition bricks, terra-cotta, marmola or matt glazes. This firm also specialises in glazed roofing tiles, fireplaces and acid-resisting work.

Westminster Bank.

The annual general meeting of the shareholders of this bank was held on January 27 at the Head Office, Lothbury, E.C. Mr. Walter Leaf (the Chairman) presided, and in the course of his speech, referring to the Bank's balance-sheet, said there had been an increase in the deposits, from £271 millions to £285 millions, which was evidence of the accumulations of savings in spite of all adverse conditions, and a good omen for growth of trade. On the other hand, there was a considerable fall in the Bank's acceptances, amounting to £2,019,000, due in large measure to depression in the cotton industry and the fall in the price of raw materials. As to their rebuilding scheme, this was now proceeding rapidly, and they had put aside another £250,000 out of profits to replace the drafts already put upon it, but the directors hoped this amount would go a long way towards completing the whole scheme. The Report was unanimously adopted.

TENDERS.

Communications for insertion under this heading should be addressed to "The Editor," and must reach him not later than Tuesday evening.

THE BUILDER

JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

XXII.—No. 4387. MARCH 4, 1927

THE PROPOSED AMENDMENT OF LEASEHOLD LAW

E announcement in the King's Speech that the Government would lay before Parliament "proposals for an amendment of the law relating to leasehold premises so as to secure to an outgoing tenant compensation for the loss of his goodwill and unexhausted ıents" has already called forth correspondence in the ıt the public at present are rather in the same position Labour Party were in as regards the proposals in the to amend the law with reference to trade disputes," ɔked a solemn debate on proposals the nature of which irely unknown to anybody except the Government. our Party frankly declared that when the unknown appeared they would contest every line in it; in fact, te seemed taken from Macbeth with a new turn with ghost. Whatever the proposals of the Government n the subject of leasehold reform, they will not be met pirit, as is shown by the letter of Lord Dynevor, the of the Land Union, which appeared in the *Times* of 9, in which, although he expressed regret that the ent had not acceded to the request of the Land Union oyal Commission might be appointed, he went on to he Union, as regards "any sound legislative proposals y be introduced with the object of removing hardships ch leaseholders may be suffering," would give its most tic support.

stated that the Bill will probably not be produced ster, but as the subject is of great interest we perhaps ure on a few non-committal observations. There is esent much to go upon; but in the first place we note Salisbury at the opening of the session was reported that the Government did not contemplate leasehold ement or anything resembling it. It is to be noticed announcement by itself does not denote anything th the system, but a misuse of that system. In our e when complaints have been made of the leasehold ney have usually been based upon the hardships by that system and not merely upon cases where the have misused their powers. With nearly thirteen ent Restriction it is almost a novelty to hear of landng any powers to misuse; but the Rent Acts affected erties of the smaller values. In a paragraph in the February 18, however, it was stated—but with what we do not know—that the Bill would deal with leasevery description, and the writer of the paragraph But it is recognised that in the drafting of the scheme be taken to ensure that in the removal of one grievance not created." Almost the only statement of any ıber of the Government on the subject is that of the General speaking at the annual dinner of the Suburban ederation on January 31, but he was careful to say he his own views and not necessarily those of the nt.

t speech he referred to cases where, although at the ase the landlord intended to pull down the premises, claims for dilapidations were made, and he ı case in his own constituency where a tenant in such ıces, rather than pay the dilapidations, had put the ıto good repair. As regards goodwill, he referred to e the goodwill formed an integral part of any increased ching to the premises and yet where the lease came to an end and the tenant applied for a renewal an increased rent based on goodwill had been demanded, under pressure, to prevent the premises from being let to a trade competitor; but the Attorney-General added that these cases were not instanced as matters easy to remedy. Any interference by legislation with matters of contract made between persons *sui juris* must be undertaken with the greatest care, and even then may lead to complications, as the Rent Acts have abundantly demonstrated, and it is notorious that hard cases make bad law.

We think that some observations contained in a memorandum issued by the Council of the Surveyors' Institution on leasehold enfranchisement, which we summarised in our issues of May 23 and May 30, 1924, have some bearing on this question. Speaking of building leases, the Memorandum states: "The lessor understands that he will forego for a lengthy period the enjoyment of the probable increase in the annual value of his property accepting in place thereof a small fixed annual payment during the term, and the reversion at the end of the lease to the improvements effected on the land. The lessee on the other hand calculates to be able to recoup himself by the rents or the occupation value to himself, so that when the time comes for the building or improvements to be handed over to the freeholder its cost has been fully met. Alterations in the basis of the bargain necessarily mean alterations in the basis of value." This is true to a greater or less extent in the case of every lease. The lease represents the bargain made between the parties, entered into with due calculation of the advantages or disadvantages inherent in that bargain.

Attention has been called in the Press to the danger of legislating so as to affect existing contracts, and we hope this point will not be lost sight of by the Government; there may be grievances disclosed in connection with some of those leases, but a legislative attempt to remove particular grievances disclosed in a few cases might have a serious effect upon thousands of contracts where the same principle applied but yet all element of grievance was absent. The Attorney-General seems fully alive to the difficulties involved; he is reported as having said: "There were many cases in which it was perfectly right that at the conclusion of a lease the rent should be largely increased because the value of the site, quite independently of the tenant's exertions, had gone up. While it was unfair to say that the great bulk of the landlords were guilty of extortion, yet there were cases in which the necessity of the tenant could be, and he feared had been, sometimes used in order to extract unfair penalties. That obviously was a matter calling for investigation and remedy, although great care had to be exercised in designing a remedy that would not in its turn bring fresh wrongs and fresh injustices."

There is little in the King's Speech to go upon, except the two expressions "goodwill" and "unexhausted improvements"; it appears that questions of goodwill can only arise in the cases instanced by the Attorney-General where the renewal of a lease is applied for, but as regards unexhausted improvements it appears very difficult questions may arise. The tenant may have effected improvements from his point of view, and they may in fact be improvements on the assumption that the premises continue to be used in the same way and for the same purpose; but the landlord cannot be tied to a particular use of his premises, and even if he were to re-let to a person in the same class of business one man's improvements may be another man's hindrances. It has to be remembered that legislation as regards leasehold property at large is a very different thing from legislating as regards specific industries or undertakings. Thus you may legislate successfully as regards "tenant right" in agriculture, small holdings, and allotments, because only a particular class of tenant is concerned and the conditions of the industry are the same, but that is not at all the same as legislating for diverse kinds of leaseholds, put to all kinds of uses, and subject to contracts which represent the business requirements and the particular wishes and needs of the innumerable classes of tenants.

NOTES

American Building Costs.

All architects and builders should read with attention the report, published on page 356, of Mr. Harvey W. Corbett's paper on "The Organisation and Cost of the Building Industry in the United States," as read last Monday at the R.I.B.A. In it is explained the paradox that while the American bricklayer and plasterer earn four or five times as much per hour as the worker in England, yet the cost per cubic foot of finished building is no more in America than in England. Mr. Corbett sums up the matter as follows:—

"I think we have found the reason why, with producing costs greater, the actual cost of the finished building in New York is practically the same as in London. There is first, the physical set-up of the buildings themselves—standard rectangular forms, less material per foot cube, and less ponderous foundations. On the physical side we have also seen that the enormous size of our buildings makes for concentration of effort, and permits more efficient systems of handling material and labour to be installed. From that point of view of organisation, we have observed that the very cost of labour has compelled us to devise ways and means whereby no labouring time is wasted. And, finally, we have found that the labourer himself is more satisfied with his lot, and hence is enabled to work more contentedly and more efficiently, and that he has greater incentive to better his position in the world."

The Commission on Bridges Report.

It is stated that the Cabinet endorse the proposals laid down in the Report of the Royal Commission, and that the bridges proposed will be built. It is satisfactory to know that at last we may expect some definite action to be taken to afford London some real relief to cross-river traffic with all the advantages which must follow in its train. But we look with much anxiety to the way in which the proposals will be carried out. The Thames waterway, as it passes through London, has been much beautified and ennobled by the flanking gardens and embankment on the north side, and there can be no reason why something of this sort should not be carried out on the south side. But it would be incredibly foolish to de ever the chances of a beautiful a garden-lined river which Lon possesses.

The Amenities about Charing Cross.

We cannot help son of amazement at the schemes prop carrying raised from the Strand a new road-bridge at Charing Cr illustrations which have lately in the daily Press reveal the results which would follow the out of such schemes. All the str round about Charing Cross dema better treatment. Would these ways have a devastating effect value of properties across which th An intrusion of high masses of st and arches would surely compl stroy the charm and amenity of Cross. The existing bridge and Cross station have long been look as blots of disfigurement on this London. Why then perpetuate make worse the cramping and ment which some of these new appear to involve? It has bee that a low-level bridge is possible can hardly believe that a st Charing Cross of adequate size built without permanent injury general amenity. Is it seriously by those with a wide enough anticipate the future, that we sha be willing to have open-air train carried over the river from the the north side? The Charing C and the Embankment gardens are the finest possessions of London cannot believe that the neces road transport need be, or sh allowed to destroy them.

A Strand Bridge and Charing Cross Station.

We have a let Mr. F. Nesbitt Ke ing out that the necessity for a br the Strand, as th from that point the railway lines is very slight. as though a crucial point in t problem lies in the question of tion of the Charing Cross railw as an upper ground station with air train service. In the intere future this point should be care sidered.

Save the Squares.

The mobilising opinion in all avai is very necessar present time, in order that its should be brought to bear. As of the London squares are fallin is imminent danger of the offering such large sums that a great temptation to owne We are all feeling how much to undo some of the evils of time, and we ought to pres squares, so full of dignified asso characteristic of English lif important to the health and a London. It seems impossible that they should be at the

t
rol.

A CORRESPONDENT recently wrote to the *Times* saying that to a "vast multitude" of the population of London bility of the withdrawal of Rent on at the end of this year was "a ghtmare," and he urges the con- of control. In one part of his prays in aid the fact that even ntrol the tenants are unable to rents, and in another passage he that grievance, *i.e.*, the grievance dlords in not obtaining even con- its, could be overcome by amend- ent Acts so as to make penalties ayment of rent more stringent. cannot pay his rent it is quite e cannot pay penalties for not and that then the only remedy viction.

ed
nd
n.

A CERTAIN large number of tenants have now occupied a privileged position for close on thirteen years, and the Legislature has aimed at gradual decontrol, according to this correspondent "a vast multitude" are still living at an uneconomical rent, at the expense of the landlords. A halt to this kind of relief must be called at some time; those unable to obtain controlled houses have to face the realities of life, and, moreover, have done so all these years, when a certain proportion of the population has been occupying a privileged position. The Valuation Act is now on the Statute Book and properties are to be rated on their true values as derived from the actual rents at which premises are let, the idea being to obtain fair valuations over wide areas. The existence of these controlled houses must have a considerable effect on the valuation that is to be held, and either all houses should be decontrolled before next year or the operation of the Valuation Act should be postponed. If decontrol were to come fifty years hence the same outcry would be raised, and that is a fact to be faced. The only reason for delay would be that there was at the end of the year a severe shortage of houses. As regards those persons who occupy controlled houses and do not pay rent, we think a series of interrogatories might be framed for use in the county courts—"During the past year how many times have you attended a cinema?" "How many excursions have you made in motor omnibuses or charabancs?" "Have you a wireless set?" and so on. The really needy cases would thus be ascertained, but so long as houses are controlled people will stick to them with far more tenacity than to their political opinions.

Constructional Steelwork.

IN this issue comes to an end the series of illustrated articles by Dr. Oscar Faber, O.B.E., D.Sc., on "Constructional Steelwork Simply Explained," which have been appearing in the *Builder* during the last six months. These, we are confident, have been of great practical assistance to architects and builders, who will be glad to hear that the whole series are to be published shortly in book form. They are likely to make a very useful reference book.

Ruins of Nuns' Church, Clonmacnoise, Ireland.

GENERAL NEWS

Professional Announcement.

Mr. John E. Yerbury, architect and surveyor, has removed to 429, Strand, W.C.2. Telephone : Gerrard 6161.

Architecture Club.

To mark their appreciation of the labours of the Royal Commission on Cross-River Traffic in London, the Architecture Club will entertain the Commissioners at a dinner to be held at the Savoy Hotel on Tuesday, March 22.

Sir Francis Fox's Estate.

Sir Francis Fox, Wimbledon, formerly of Moorgate-street, E.C., civil engineer, who was responsible for the construction of several railway and Tube undertakings in England and abroad, and for the operations for the preservation and restoration of several English cathedrals, left £40,615.

Mr. Oliver Hall.

At a general assembly of Academicians and Associates held recently Mr. Oliver Hall, A.R.A., was elected a Royal Academician. Mr. Hall was born in 1869, and elected A.R.A. in 1920, when his "Shap Moors" was bought under the Chantrey Bequest for the Tate Gallery. He is also a member of the Royal Society of Painters in Water Colours.

New National Trust Acquisition.

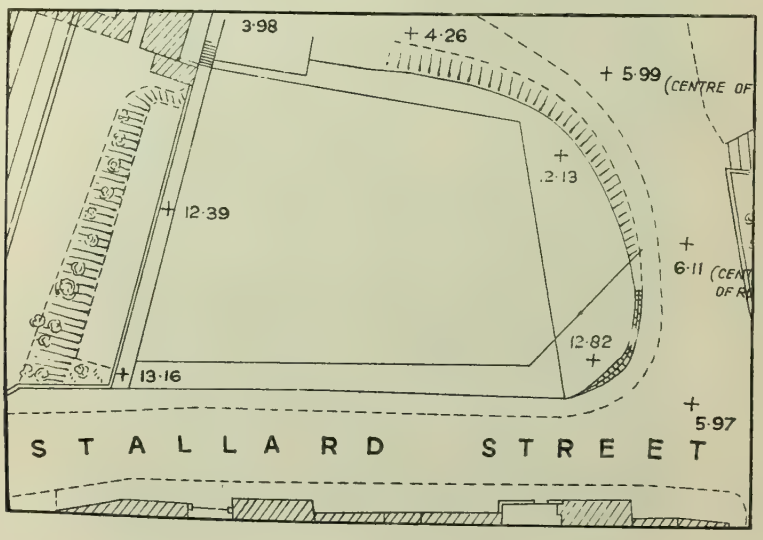
The Executive Committee of the National Trust has announced that the 155 acres of High Down, near Farringford, in the Isle of Wight, have been presented to the Trust by Lord Tennyson as a memorial to his father, Lord Alfred Tennyson. It is understood that the property will be known in future as Tennyson Cliff and Downs.

Sir John Soane's Museum.

This museum, which is housed at 13, Lincoln's Inn Fields—an interesting house and one well over a century old—is now open free to the public from 10.30 a.m. to 5 p.m., until August. Admission at other times may be gained by cards obtainable from the Curator. The exhibits consist of paintings, sculpture and antiquities.

London University Sites.

It is understood, says the *Times*, that negotiations which have been going on between the Bedford Estate and the Senate of the University of London for a site in Bloomsbury have broken down. The property, of an acre and a half, was wanted for the central offices of the University. Intimation was given that the estate offer must be accepted within a fortnight, but, as the price asked was considerably higher than the Senate's valuation, the project has been abandoned. Negotiations are proceeding for another site, of less than an acre, which would house the Institute of Historical Research, the Students' Union, and the O.T.C., but so far no decision has been arrived at.



London Housing Subsidy.

The proposals of the Minister of Health regarding a reduction of the housing subsidy were discussed at Tuesday's meeting of the London County Council, when the Housing Committee stated that they did not consider that any special action on the part of the Council was called for. Lieut.-Colonel C. B. Levita, chairman of the committee, declined to accept an amendment that the committee should reconsider the matter. It was disastrous that it should be considered essential to give a subsidy, and he hoped that, as time went on, the subsidy would taper down to nothing. So long as building was in any way restricted and a man was not paid in relation to his output, so long would the cost of housing remain inordinately high. The Council rejected the amendment to refer back the report, which was thereupon agreed to.

India House for London.

The project Sir Atul Chatterjee has had under consideration, since becoming High Commissioner for India two years ago, for the provision of an India House in London has received, according to the *Times*, the approbation of the Standing Finance Committee of the Legislative Assembly. In a statement of the case laid before the committee, reference is made to the inconvenience of the present position of the High Commissioner's office in Grosvenor Gardens, and the disadvantages of the location there, so far from the City, of the Trade Commissioner. Accordingly search was made for a site, and one has been selected on the Aldwych property of the London County Council, the High Commissioner obtaining an option thereon pending decision in India. It is understood that he is being advised architecturally by Sir Herbert Baker, one of the architects of New Delhi.

The Government hold it to be important to India that the new office, like the offices of the Dominion High Commissioners, should be treated as a centre by visitors from India and others interested in India, and that it should be worthy of the Empire. The scheme has obvious attractions and will, it is believed, go a long way to improve India's commercial relations with the Empire and foreign countries and stimulate the export of her products. The Secretary of State for India has agreed to the principle of the proposal and to the site selected. It is not expected that the building can be completed in less than two years.

Trowbridge New Offices Competition : Site Plan.

COMPETITION NI

Manchester Town Hall Extensior

The following six architects hav selected to submit their designs to the in this competition :—Messrs. Bradsha & Hope, Bolton; Messrs. Collcutt & London; Mr. J. B. S. Cowper, Lond Harry S. Fairhurst, Manchester; Vincent Harris, London; and Mr. F Webber, London.

On completion of their designs all the tects will be entitled to a fee of £500 eac probable that at an early date the plan include a new reference library, will be to the public at the Ardwick Town Hal they have been judged. The extensior mated to cost a million pounds. The are Messrs. T. R. Milburn, Robert Atki Ralph Knott.

Victoria Hospital, Blackpool.

Mr. H. Percy Adams, F.R.I.B.A., the in the competition for the remodelling extension to this hospital, has made hi as follows :—First, Messrs. J. S. G Gordon, London; second, Messrs. Alfre Snell & Phillips, London (Premium third, Messrs. Adshead, Topham & Manchester (Premium £50). Sixteen fi mitted designs. The scheme is estim cost £100,000.

General Hospital Extension, Herefo

Mr. Charles E. Elcock, F.R.I.B. assessor in this competition, has m awards as follows :—

First : Messrs. Adams, Holden & (Premium, £150.)

Second : Messrs. W. & T. R. Milburn mium, £100.)

Third : Ralph Knott, Collins & Snel mium, £75.)

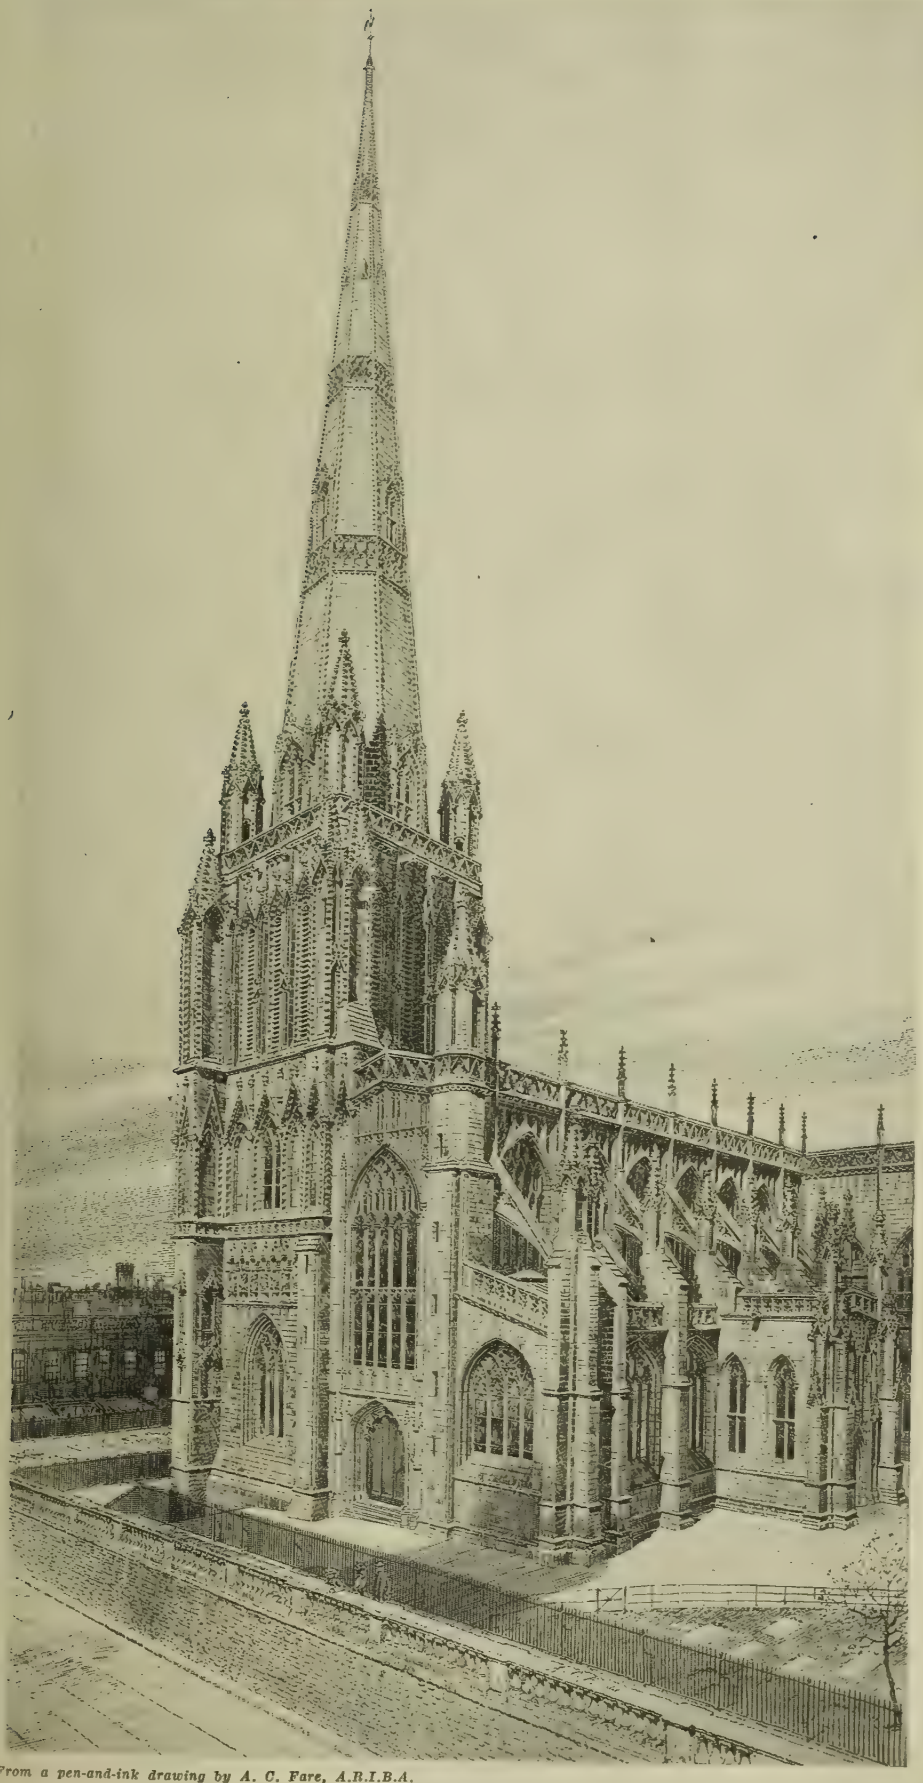
Council Offices, Bognor.

Architects willing to enter a limited tion for the erection of Council offices at should send their names not later than to Mr. Joseph Jubb, Clerk's Office, Sussex. Mr. Septimus Warwick, F.I has been appointed assessor.

War Memorial, Canberra.

We understand that the Australi Memorial Committee has awarded the pr the architectural competition for the to be erected at Canberra jointly to M steen and Mr. Crust, both of Sydney, work in collaboration.

Grammar School, Bradford.



With further reference to this compe which we gave notice in our issue of Feb designs for which are to include the cinema and swimming bath, we unders in the conditions and instructions issu Governors it is stated the designs s simple and dignified. The school is to a date 730 boys in the upper school, and lower. As far as possible it is desired schools should be separate and self-c though not in detached blocks. T must accommodate 1,000 boys, and as used for concerts and other funct auditorium must be capable of expans it is pointed out that a boarded floor i so that the hall might be available for

Proposed New Offices, Trowbridge, W

The Wiltshire Working Men's Co Benefit Society invite architects to sub April 12 designs in competition for proposed to be erected on a site in street, Trowbridge, Wiltshire. Mr. Farey, A.R.I.B.A., and Mr. Robe F.R.I.B.A., of 7, Bedford-square, W.C.1, are the assessors, and premiur £70, and £30 will be awarded. Full of conditions and instructions may b from the Chief Secretary, Wiltshir Men's Conservative Benefit Society, T Wilts.

Girls' Secondary School, Lyth

The assessor in this competition reference was made in our last iss Arnold Thornely, F.R.I.B.A., 612, P Building, Liverpool.

From a pen-and-ink drawing by A. C. Fare, A.R.I.B.A.

St. Mary Redcliffe, Bristol. (*See page* 362.)

AMERICAN APARTMENT HOUSES—VIII

BY F. E. BENNETT, A.R.I.B.A.

The Ground Floor.

THE ground floor is always different from the other floors, having to contain the public entrance hall. In addition to this it may contain other special features. 1020, Fifth-avenue (see last week's issue), is a very usual type, with vestibule preceding the hall, and the lift at the far end. Open access is provided to the rear court and to the public stairway. There are two "Duplex" flats covering the remainder of the floor, each having bedrooms on the floor

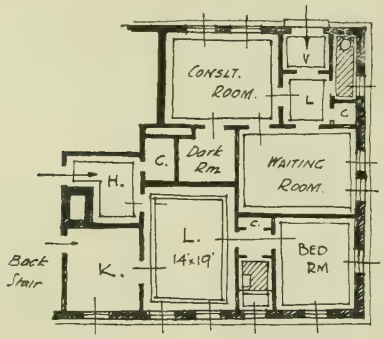


FIG. 32.—PLAN OF DOCTOR'S FLAT, 355, RIVERSIDE-DRIVE, NEW YORK.

above. One flat has a private entrance from the street.

Fig. 33, the first floor of the "Barry Apartments," Chicago, is much larger, and shows two entrances, public halls, manager's office, bureau overlooking both corridors, some odd maids' rooms and seven "Simplex" flats. The "Simplex," or single-story flats, are possible here because the situation is much quieter than Fifth-avenue or Park-avenue in New York. Sometimes in Chicago a small room for perambulators, &c., is provided adjoining the hall.

A doctor's flat, with separate entrance, is quite a usual feature. This is one designed by Mr. Alfred C. Bossom for 355, Riverside-drive, N.Y. (Fig. 32). Fig. 35 is a kind of hall which looks well and is applied to some of the plans illustrated. Two public entrances are unusual, owing to the expense of providing porters for both of them. Sometimes it is found advisable to keep the entrance away from the main street and to have it on the side street where cars can be parked and watched. If possible the entrance hall is run through so that it has a window looking on to the rear court. The

	F= Fuel. *S*= Sump.

planning of the ground floor is a matter of laying down the hall and approaches to lifts, and doing the best possible with the remainder.

Shops are not always desirable, and are avoided on good-class buildings. Sometimes the ground floor includes the janitor's flat, but more usually this is put in the basement. An iron gateway fills in the space where the side court joins the street in corner sites. This gate is much in evidence, and is usually quite large and elaborately designed, although used only by the tradesmen.

The treatment of the entrance doorway and of the vestibule and hall usually receive much attention. Radiators are placed at the sides of the vestibule. The decorative schemes of entrance halls generally rely more on careful design than on richness or expensiveness. Materials are perhaps brick and rough plaster finish, with the colour effects properly handled. Frequently they are treated with terrazzo, marbles, coffered ceilings, paintings, the orders

in plaster, mirrors, a little furniture and lamps. Again, the wall finish to entrance may be in Travantine (lava from Travernal (Italian marble, feint yello colour), or pink Tennessee marble. The ing finish may be terrazzo ("Trail marble chips laid in cement, divided into geometric patterns by thin brass strips.

The Roof Story or Pent House.

The laws regulate that on a maxim 50 per cent. of the roof area accomm may be constructed for a superintende store rooms, and for extra servants' This accommodation, well handled, is times made into the best flat in the b by treating the unused portion of the a garden and terrace, and having windows leading on to it. It is not common thing to find the architect building living in the pent-house and himself the superintendent. The beauty roof garden is, however, sometimes mar the chimney from the boiler which is to and too close to the terrace. Space i allotted in the pent house for additional bedrooms, which are let to the tenants.

The Cellar.

Cellars invariably extend beyond th wall structure, at the back and und the rear courts. The floor height is to 12 ft., except in the boiler-room, whe more. The law requires that the cella not be more than 2 ft. above pavement

Space is provided for :—

1. Storage compartments—1 per apa
2. Laundry compartments—1 per apartments, or a general laundr
3. Passenger lift machinery and landi for the service lift.
4. Coal storage.
5. Garbage-can room.
6. Ash hoist.
7. Boot-boy's room.
8. Janitor's flat, store-room, w.c lavatory.
9. Steps and passages giving all circulation.
10. Boiler-room containing 2 boile 2 hot-water heaters, storage ta
11. Pump-room containing 2 pressure sump, &c.
12. Space for switch-board and fuse-
13. Space for gas meters.
14. Space to receive tradesmen's deli
15. Incinerator.
16. Ash flue from fireplaces.

In addition there may be refrigerati room for valet service and staff locke laundry compartments are about 7 ft. 13 ft. each, and the storage comp about 60 ft., with wire mesh partitions

SMOKE ABATEMENT

WITH reference to the Public Health (Smoke Abatement) Act, 1926, which comes into operation on July 1 next, the Ministry of Health has issued a Circular (No. 759), obtainable at H.M. Stationery Office, price 2d. net, to the county councils and sanitary authorities, in which attention is drawn "to the following matters in connection with the administration of the law with regard to smoke abatement.

"(1) *General Administration.*—The new Act will give local authorities useful additional powers; but results must depend primarily upon good administration, and this is a matter which rests in the hands of the local authorities. By careful administration and close co-operation it is clear that much more can be done to reduce the emission of smoke. In this connection. it will be of advantage if the officials responsible for the abatement of smoke nuisances are specially qualified, and the Minister is glad to know that an increasing number of officers are taking advantage of special courses of training.

"(2) *Regional Committees.*—Some regional committees have recently been appointed to consider the smoke problem in their districts, and have rendered useful service. It appears to the Minister that there are advantages to be gained from the appointment of such a Committee, with either advisory or executive functions as may seem fit, in every area where there is a smoke problem common to a number of local authorities.

"(3) *Standards.*—The provisions in the Act in this matter should prove of much administrative service. They put on a legal basis a practice which has already been adopted by a number of local authorities. The Minister is advised that at present it is not practicable to apply standards to any but black smoke, and the kind of by-law which it will be possible to make under the section will provide that there shall be a presumption of a nuisance if, for instance. black smoke is emitted for two minutes in the aggregate within any continuous period of thirty minutes. This is a standard which is already applied in some cases. It may not be considered practicable in every district to apply so strict a standard at once, but it appears to the Minister that, in the absence of special circumstances, it should be the aim gradually to reach this standard. The Minister is of opinion that by-laws under this section should be made in every considerable industrial district.

"(4) *Exemption.*—The exemption which is already given to certain industrial processes by the Public Health Act, 1875, is extended by the new Act to certain additional metal processes. Power is also given by Provisional Order to extend the exemption to other industrial processes.

"(5) *Private Dwelling-houses.*—The Government did not consider it right at the present time to propose legislation as to the emission of smoke from private dwelling-houses. As regards new houses, much is now being done by local authorities and private builders to instal such methods of heating and cooking as will reduce the emission of smoke. and it is desirable that this process should be encouraged.

"(6) *Alkali Act.*—Since the Alkali, &c., Works Regulation Act was passed in 1906, consolidating and amending earlier enactments. there have been a number of new processes which on present evidence should probably be brought within the operation of the Act. It is the intention of the Minister to consider what extensions should be made, but full opportunity will be given to all interests to put forward their views before any Order is made under the Act."

The new Act enables proceedings to be taken in respect of "smoke which is not black; extension of 'smoke' to include soot, ash, grit, and gritty particles; increase of penalties; power to make by-laws prescribing standards as to the emission of smoke; and also with regard to cooking and heating arrangements in new buildings other than private dwelling-houses."

ORGANISATION AND COST OF THE BUILDING INDUSTRY IN THE U.S.A.

THE PRESIDENT, MR. E. GUY DAWBER, presided at last Monday evening's meeting of the R.I.B.A., when a paper by MR. HARVEY WILEY CORBETT on this subject was read, in Mr. Corbett's unavoidable absence, by MR. T. S. TAIT, F.R.I.B.A. After some introductory remarks, the writer said on his visit to London last summer his only business excuse was an inquiry into the rather problematical extensions to Bush House. At that time he went rather carefully into the matter of costs for that particular type of commercial building. Mr. T. S. Nunn, of Messrs. Burr, Son & Nunn, who handled the quantities and directed the London office during the construction of Bush House, rendered him a great service by providing him with a complete list of labour costs figured on an hourly basis, and material costs figured on a unit price basis. Then, upon his (the speaker's) return to New York, Messrs. Hegeman & Harris, contractors for the "Chicago Tribune" building and many other notable works in America, very kindly checked this list with their own lists, and supplied the figures for identical items in New York. In this manner he secured a complete tabulation of building production costs in the two cities—a practical list, not a supposititious one based on theory or guesswork. An analysis of these tables yielded some surprising results. At first glance the first list, relating to materials, appeared to show a slightly higher cost average in New York. Brick and sand, for instance, were observed to be about the same; wood was much more costly in London; but, on the other hand, limestone, similar to Bath, was more expensive in New York. The second list, however, showing the cost of labour per working hour, revealed an enormous difference. We found that labour in New York was paid at least four to five times as much per hour as in London, four being a conservative estimate. For instance, a bricklayer in London received 1s. 9½d., and in New York 7s. 3d. A compressor driver got 1s. 5½d. in London, 8s. in New York. An iron worker 1s. 5½d. in London, and 7s. 3d. in New York; a plasterer 1s. 9½d. in London, and as much as 10s. in New York.

With these figures in mind, they might well imagine his astonishment when he read further on in Mr. Nunn's report that the cost per foot cube of finished building (commercial buildings) was actually no more in New York than in London. Mr. Nunn wrote:

"While to-day's prices per foot cube for various buildings in London are approximately considerably less than they were in the boom years immediately following the war, they still show an increase of probably 120 per cent. over pre-war costs. A large modern office building of a substantial and efficient but plain description cannot be built for a figure less than 2s. 1d. per foot cube. Examples are numerous at from 2s. 4d. to 2s. 9d. The larger and more ornate buildings for shipping companies, statutory authorities and other big concerns vary from 3s. 3d. to 5s. per foot cube, according to the nature of the work, the character of the external elevation treatment and the amount of decorative finish desired in the principal portions internally." If he (the writer) were asked to give foot cube figures for these classes of buildings in New York, they would be practically the same in each case. His task was, therefore, to explain how, with labour over four times as costly, they could build at the same final price for the finished structure.

There were four factors which went to make up the actual cost of a building. He said "actual cost" advisedly, because capital cost involved land values, fees, commissions on furnishing the necessary finances, taxes and interest during construction, and many other things. If they confined their discussion to this actual cost, he believed they would not only have a fair basis of comparison between London and New York, but a relatively accurate basis of comparison for the whole of the British Isles and the whole of the United States. And what was more, he thought the same comparison would apply to other building fields—residential, industrial, educational, governmental and religious—as well as to commercial construction.

These four factors of actual cost were:—

1. Architects' and engineers' services.
2. Contractor's organisation costs.
3. Material.
4. Labour to put the material in place.

The first item, architects' and engineers' services, was to all intents and purposes the same for New York and London, namely, 6 per cent. of the cost of the building. The second item, contractor's organisation costs, we might also assume to be about the same. Although in America they might have larger contracting organisations with greater overhead expenses, the volume of work done was proportionately greater, and hence the overhead charge against each individual job was proportionately less. It was more difficult to determine whether the third item, material, became a natural increased cost in the completed building or not. The unit price cost was greater in New York than in London, but it would be readily understood that that would depend on the type of building, for in some the biggest item might be brick, in others stone, and in others steel. Wood in New York was much cheaper than in London, and while no wood remained in most of their finished buildings, it was very extensively used in the process of construction. If this temporary wood could be ripped out and thrown away when it had served its purpose, as with them, it was easily seen that labour was saved over the case where it was necessary for economy's sake to salvage each piece and preserve it for future use. However, he believed they were safe in assuming, all things considered, that material costs were about the same in the two cities.

Hence three out of four factors in the actual cost of building were seen to be about the same in London and New York. It therefore followed that the fourth, labour, must account for the great discrepancy which appeared to exist between the cost of production and the final cost. They found New York paying four times as much as London for labour, and yet the finished fireproof building, on a foot cube basis, remained practically the same. One of two things must happen. Either in England a great deal more material was put in to produce a given foot cube, or American labour put in a great deal more material per working hour; either England built more substantially than necessary, or America erected buildings that were flimsy and insecure; either English organisation did not provide the facilities for its labour to work efficiently, or American organisation gave the workman every chance to work at maximum speed. He had watched British labourers at work, and he would hesitate to say that, when supplied with every opportunity for efficient effort, they were any less rapid than American labourers. In fact, operatives from the British Isles were among the best of all nationalities from which the New York building trades drew their la staffs.

With regard to the quantity of which went into the building to pr given foot cube, there was no doubt mind that London practice was to bui substantially—heavier foundations, walls, larger floor loads and stronge This alone would explain part of crepancy, but not all. American build mated labour at 60 per cent. of the cost, material at 40 per cent. In Engl proportion must be more than reversed being more nearly 30 per cent. of the cost and material 70 per cent. There increase in the quantity of material cube would, of course, affect final build in England more than would an incr labour wages. But in spite of this felt that a careful analysis must be first of the physical set-up of American ings as compared with English, and of the organisation of the building indu the two countries.

As far as physical set-up was concern American problem was much simpler t English. Their building plots were ne rectangular, due to the "grid-iron" their city streets. In England the irregular, with all sorts of angles, curv notches. Æsthetically such a lay-out v doubtedly finer, but practically the cheaper. It meant that they cou standard-sized steel forms which were to assemble than irregular ones. The less because they could be manufactu quantity, and they were easier fo labourers to put in place. Already they that from a physical point of view they money from the very plan of their cities average life of a commercial building i York City was said to be twenty years although he would hesitate to say th reputable architects or builders—or ev disreputable ones—designed their bu with one eye on the calendar for 194 semi-temporary nature of their const was bound to influence them to some Or, rather, he should say it influenc owner. The architect naturally wa monument to his talents, whereas the looked to his bank account and balance. were therefore inclined to build rather without sacrificing efficiency and st while English architects tended to gi terity a fighting chance to admire their work.

There were other things which made material cost higher than American. earth and clay required spread footing foundation, whereas, in New York a they had to deal chiefly with roc although rock might be more costly t vate, it required less in the way of s ture. Furthermore, he had noticed London they built a limited number o on foundations that were strong eno many more. But the chief physical st America resulted from the great size building operations. On those huge str most of which were concentrated in limited area, they were enabled to ins tems which would be impossible in of small operations scattered at separated points. The new Greybar in New York, for instance, contained 2 cubic feet and yet was built in a y one month. It had 31 acres of carp but covered only 68,000 square feet for it was 31 stories high. This buil designed by the architectural firm of Robinson, and was built by th Robinson, Todd Engineering Corpora also built the Cunard Building in N They had given him a Progress Cha showed the care with which every ele scheduled to arrive and to be put during construction. Such charts w before any sub-contract was let, and adhered to in the course of the wo very day and hour.

The increasing tendency in Americ owners to assemble larger and large whereon to put up larger and taller This had nothing to do with what oth

ined to call megalomania, but was cessary in order to get proper return where taxes were so high. The for large plottage became still greater ing laws were put into effect in 1916. ation of these laws was to restrict of buildings according to the width ets they flanked, the permitted height ccording to the district or zone in building was located. The height rred, however, only to the straight eight, " step-backs " being allowed that the building thereafter receded letermined angle, with the additional a tower to any height over quarter area. Now it was obvious that the plot was, the taller the building made and the higher the tower, and, said, height was necessary to get an return.

hese huge structures, a construction in New York might do only four or a year, and yet have a total annual business amounting to six million To do six million pounds' worth of n London, a contractor would have himself over fifty, perhaps a hundred ered all over the city, with a con- increased overhead, and terrific This brought him to the crux of situation, the question of building on. They probably heard over- mericans rhapsodise about American and American business organisation were sick and tired of it. But the ined, they had it, and if they had not, ld be prohibitive in the building When labour was 60 per cent. of , delays mounted up in money with rapidity. So their big construction ons had highly paid men whose sole was to prevent delays. These men ng but make weekly and even bi- spections of the material during the its manufacture. The material must d on time, routed on schedule, and at exactly the psychological moment er, lest it cluttered the streets and impeded progress; and no later, lest lionaire bricklayers and steam-fitters wages without doing any work in The delivery of material to points on n Island was in itself a task of extra- complication, for much of it must ransport—rail, barge, and motor eral times before it reached its n. The whole progress of the build- scheduled with the same exactitude. abour gang was finished with a cer- of a building, it was thrown to art where the material was waiting to another building—all on schedule ry hour and minute. Since most in New York were accepted with alties for every day of delay in com- he contractor must know pretty just what the entire time schedule before the work was even begun. ychological aspect of their labour was another highly important and musing matter. The labourer in ing trades received almost fabulous ricklayers got $14 to $16 per day; rs, $16; plasterers as high as $20. was three and four times the amount he so-called " white-collar " man. g overtime the labourer could make as much as a stenographer or a make in a week. Their universities ng out thousands of trained men into banks and bond houses, law mercantile firms, and for several d considerably less than the man astered a mechanical trade.

psychological effect of this seem- -turvy condition was extremely in- It had given labour the dignity always go with financial independ- England, the labourer was con- re of class distinctions. He took vithout dispute, and dared not talk boss. In America, he felt a certain quality with his boss, or at least mediate overseer. If he did not y he was treated, he said, so, and if he continued to be dissatisfied, he quitted, always sure of finding another job. Of course, that made it difficult at times for the boss, but there was another side to the medal. The American labourer felt himself at liberty to make suggestions, which the labourer in England would never dare make. If he found some shorter, more efficacious way of doing things, he spoke up, and if his superintendent was intelligent and the suggestion good, it was adopted. It gave him, in other words, incentive. Many of the highly paid executives in building concerns in America had come up from the ranks in that way.

A great deal was being done to make American labourers do good and rapid work—perhaps too much. Recently a labourer working on one of the new Columbia University buildings was called before a large meeting in the auditorium and awarded a certificate of craftsmanship. Dr. Butler, president of the University, was there, together with officials of the Building Congress, architects and engineers. There were speeches of congratulation, and he was given a gold button to wear in his coat lapel. This did not mean that he received extra pay, or even a bonus, but it meant that he would never want for regular work. When he applied for a job, he simply had to show the gold button and he would be taken on without further question. But the final effect that high wages had on the labourer was that it drew a higher class of men. They were more intelligent and efficient. Whether the present scale of wages was right and proper, or whether it was due to come a cropper some day, he was not prepared to say. But the fact remained that the unions had never from the beginning permitted a decrease in wages. And there still seemed to be plenty of work to be done.

To sum up, he thought they had found the reason why, with producing costs greater, the actual cost of the finished building in New York was practically the same as in London. There was, first, the physical set-up of the buildings themselves—standard rectangular forms, less material per foot cube, and less ponderous foundations. On the physical side they had also seen that the enormous size of American buildings made for concentration of effort, and permitted more efficient systems of handling material and labour to be installed. From the point of view of organisation, they had observed that the very cost of labour had compelled them to devise ways and means whereby no labouring time was wasted. And, finally, they had found that the labourer himself was more satisfied with his lot, and hence was enabled to work more contentedly and more efficiently, and that he had greater incentive to better his position in the world.

Mr. Wm. H. Nicholls, F.I.O.B., proposing a vote of thanks, said Mr. Corbett had estimated labour at 60 per cent. and material as 40 per cent. of building cost in the United States, and as 30 per cent. and 70 per cent. respectively in this country. He suggested that 40 per cent. for labour and 60 per cent. for materials in England would be a more accurate estimate. The speaker then showed how, on Mr. Corbett's figures, a given job would take 192,000 hours to accomplish in New York and 480,000 hours in London. This was a challenge that should not be let pass. In his view Mr. Corbett was really comparing the incomparable, because the factors were so entirely different. The speaker then related how an American engineer came over to this country to " show us how to build." The architect wanted to alter something while the work was in progress, with the result that the American system was thrown out of gear. It was a question whether architecture should be allowed to become merely a pawn in the capitalist's game. He did not know whether we wanted to see that, or whether the English operative would allow it to happen. In one respect American architects set us an example; whereas we were prone to fill our spaces with detail rather than with the essence of proportion, in American buildings we would find just one fine piece of detail set in a wall space. In the case of an English job, with an awkward site, a lot of special detail and other complications, the bill was bound to be heavy and the labour slow and costly. To show that the English operative was capable of a big output if properly encouraged, the speaker instanced the case of six men working on a certain housing scheme, each earning £10 per week and laying their two thousand bricks a day. Labour should be the first charge upon industry and not a subsidiary one. It might be that contractors had something to learn from America, or it might be that the operatives had yet to learn that greater output meant greater demand. But he felt that we should try to find some means of comparing like with like—of testing whether our American friends really were able to carry out building work more efficiently and cheaply than ourselves.

Mr. R. Coppock, General Secretary, National Federation of Building Trades' Operatives, seconding the vote of thanks, said the implication of Mr. Corbett's paper was that English building trade operatives were very indolent, but in his (the speaker's) experience they did as much work as they were paid for. Was it true, " the greater the output the greater the demand "—that the quicker you built a Liverpool Cathedral or a Regent-street, the quicker you would have similar new jobs to start upon? Building might now be flourishing, but what was going to happen in 1928? That was the kind of problem that engaged his earnest consideration. Friends of his had worked in America and had come back and told him that they worked no harder or faster there than here. In America the first consideration was the supervision of the supply of materials, whereas in this country the first consideration seemed to be to watch the man do the work. Here we did not seem to be able to get away from old methods. A man still had to " reach down two feet and up ten." The speaker suggested that much good might come from a more intimate association between the architect, the contractor, and the workman. They could reduce costs by improved methods. If we considered wages on the American plan we could get all the output we wanted in this country. Turning to the question of standardisation, the speaker mentioned examples of steel and concrete houses which, he said, meant death, æsthetically. One did not want to see that kind of standardisation multiplied in this country. There was more soul, he believed, among the building trade employers of this country than there was in America, and greater ideals.

Mr. J. B. Stevenson said that in New York there was much more co-operation between the architect and the builder, and the builder and his labour than there was in this country. The English operative was quite as good as the American, but the latter was very much more practised at one type of job. Here a man would be working on one type of job one day and quite a different one the next, and he really had not the same chance as the American operative.

Mr. Howard Robertson said American buildings, though built for a comparatively brief term of years, were not really shoddy; they were quite well done. They were certainly of a more temporary nature than English buildings; of lighter construction and with thinner walls. In England we had not arrived at finality of equipment. Everything was done to give the American workman facilities for a very high output. Wages were high, but living was high as well. The American operative was well off in work, but when out of work his savings were very soon exhausted. Standardisation of such elements as metal sash windows, doors, " trim," and so on, contributed to cheapness in American commercial buildings. It was good, sensible stuff—well proportioned and carefully studied in the design of the unit. In domestic work they did not find much standardisation, and consequently the cost was higher.

Mr. Hastwell Grayson said that the penalty system in America no doubt led to so much organisation. Mr. Robertson had told him many interesting things in that respect; for instance, that the tubes for electric wires and heating pipes were put in with the steelwork.

The President said it was individuality that still kept old England what it was.

Mr. T. S. Tait briefly replied.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Architectural Registration.

SIR,—With the question of Registration again looming large on the professional horizon, it is important that bodies such as the Association of Architects, Surveyors and Technical Assistants should express publicly at the earliest possible moment the views of its members on so important a subject. My Association approves the principle of Registration, always providing that the scheme proposed will apply equally to all persons engaged in the profession, without regard to membership of this or that organisation or society. So far as can be judged at this early stage the Bill sponsored by the R.I.B.A. can be described as fulfilling this condition. My Association has therefore decided to give general support to the scheme. Nevertheless, there are several points of special importance to salaried architects (who comprise the greater section of the profession), which it desires to see incorporated in the Bill, and which it is of opinion will have to be adopted before this section can be said to have reaped the full advantages which it is generally hoped Registration will bring.

Although comprising the majority of those in the profession, salaried architects are the least powerful and the poorest paid. It is they who feel the worst effects of overcrowding, intermittent employment, and of the present casual and inefficient system of entrance to the profession. Their subordinate position (they are occasionally referred to as "ghosts") is a perpetual stumbling-block to their ever becoming sufficiently well known in the profession to secure adequate representation on the councils and committees of architectural societies. Thus most of the protective measures, including registration, adopted by these bodies are framed without adequate regard to, or reliable advice on, the special circumstances of the salaried architects' employment and position.

As the only organised body recognised as representing solely the salaried architects, and with the object, therefore, of informing the profession of their wishes regarding this particular scheme, the A.A.S.T.A. has put forward to the R.I.B.A. Registration Committee the following proposals and amendments, all of which may be described as constructive, and in the opinion of my Council, calculated to strengthen the Bill in so far as the special case of salaried architects is concerned :—

(i) Since the expression "architectural assistant" is too vague, and is capable of bearing several interpretations, a definite interpretation would appear to be necessary in Clause 2 (*e.g.*, that the expression "architectural assistant" means any assistant architect, architectural draughtsman, student, pupil, or apprentice, or any other person engaged on architectural work).

This amendment has been largely met by the R.I.B.A. Registration Committee, and Clause 5 (B) of the Bill has been amended to include a definition of the "five years'" qualification, which period may now include any term of pupilage with an architect, or in a recognised school of architecture. (My Council has been assured that the term "architectural assistant" will include any *bona-fide* architectural assistant, no matter by whom employed, or how graded by his employer.) In view of the many cases known to the Association where injustice might easily be done, my Council has considered it desirable still to press for a definition somewhat on the lines of the assurance received, which would be less vague than the simple expression "architectural assistant."

(ii) In order that future entrants to the profession shall be known, and opportunity afforded for the adequate supervision of their training, a Register of Students should be a provision in the Bill; such students or pupils to be registered at the commencement of their studies.

In view of the decidedly vague knowledge possessed by the profession of the number which enters its ranks year by year, and the consequent lack of any definite and regular system of training, my Council is still pressing for the provision of a Register of Students within the Bill. The information and statistics which would be available from such a Register would in turn enable the profession to provide adequate facilities for the training of all entrants, and so give them a fairer and more equal chance of becoming efficient architects, of obtaining their professional diploma, and of passing any test set for Registration than is ever possible under the present loose and inefficient system. The Registration Committee is still considering this amendment.

(iii) In Clause 5 (B) it is provided that architectural assistants for a period of "five years immediately prior to" the date of the passing of this Act shall be registered. It is felt that in fairness to all architectural assistants the words "immediately" and "is so at the date of the passing of this Act" should be deleted, the paragraph reading as follows :—

(B) was a *bona-fide* architectural assistant for a period of five years prior to the date of the passing of this Act.

My Council, in submitting this amendment, was desirous of protecting the interests of two groups. First, the salaried architect who at the time of the passing of the Act might be unemployed. Second, the *bona-fide* assistant who, through lack of work within the five years prior to the passing of the Act, may have been unemployed or have accepted a temporary post outside the profession and so failed to qualify. As a result of my Council's representations, Clause 5 (B) has been amended by the Registration Committee to include all such *bona-fide* architectural assistants otherwise eligible on the Register. There is nothing now in the clause to indicate that the applicant must necessarily be in some employment at the date of his application.

(iv) That in view of the large proportion of assistants who will be registered, and who for several already well-known reasons will be unrepresented on the Council or Committee administering the Act, it is suggested that (*a*) at least two official representatives of the A.A.S.T.A. be nominated to the R.I.B.A. Council instead of one as at present, and (*b*) the Council should appoint at least one of these to any smaller Committee set up to administer the Act.

(This principle was adopted by the R.I.B.A. Council when it set up the Unification and Registration Committee and Sub-Committee respectively in 1920 and 1921.)

It will be observed that many of the amendments put forward by my Council have been adopted by the Registration Committee.

Thus it will be apparent to all salaried architects that constant watchfulness and preparedness alone will provide them with adequate safeguards under Registration. My Council would therefore earnestly appeal to all to give the Association of Architects, Surveyors and Technical Assistants their whole-hearted support now, in its endeavours to protect and advance their professional status, interests, and privileges.

JOHN MITCHELL,
General Secretary.

SIR,—An important point which appears to have escaped the notice of your correspondents on the subject of the Architects' Registration Bill is that of the position of the professional bodies outside the architectural profession referred to in Section 20 of the Bill, the Schedule to which comprises :—

The Institution of Civil Engineers.
The Surveyors' Institution.
The Institution of Structural Engineers.
The Institution of Municipal and County Engineers.
The Auctioneers and Estate Agents' Institute.

Members of these bodies are *ipso facto* exempted from all provisions of the Bill (except th
may not style themselves "architects
are, therefore, *not* subject to registrati
are nevertheless able to practise as arc
give architects' certificates, and generally
in the profession of architecture, althou
in many cases possess no qualificat
experience in this profession.

It would be interesting to learn o
logical grounds it is proposed to exempt n
of these outside professional bodies fro
tration, and yet to empower them to give
tects'" certificates and charge for prof
services, and at the same time to
members of purely architectural organi
many of whom have been in prac
architects for a lifetime, but who do n
scribe to the R.I.B.A., to submit to
by the R.I.B.A. as to their suitability
on their profession.

H. B. WHITEFIELD,
General Secretary
Faculty of Architects and Su

Architectural Competitions and You Architects.

SIR,—The apathy which is supposed
amongst assistants and students of the
day perhaps accounts for the absence
response in your columns to the que
limiting competitors to architects in
raised by your correspondent "N.D.
few weeks ago. There is no doubt th
petitions open to all have provided the
necessary to enable a young and clever a
without capital or influence to build up
tice for himself.

As the purpose of competitions is s
discover a genius, it seems to follow t
limiting restrictions are wrong in
and likely to produce a result the re
that expected by the promoters. On t
hand, it might be admitted from a
point of view that there is a risk in er
important work to a young architect
obviously without experience, but it is
able whether the possession of a bui
exceptional architectural merit should
than compensate for this. In the in
architecture, when professional advi
appointed, should it not be their duty
to allow the restricting condition?

Charing Cross Bridge.

SIR,—It would seem from the bird's-
of the proposed new roadway over the
at Charing Cross, published in a daily pa
the suggestion made in *The Builder* of F
that the entrance to the new road sho
mence from Charing Cross Bridge i
further down the Strand, has been ad
the Royal Commission on London Cr
Traffic, but the proposed bridge over t
is retained. This is regrettable, as fror
at the map of London it will be at once
cars from the City instead of goin
Strand will have to follow a roundabo
get to Waterloo Station by the new r
There is really no need for this bridg
Strand, as the incline from that point
the railway lines is very slight, and t
be further and carefully considered.

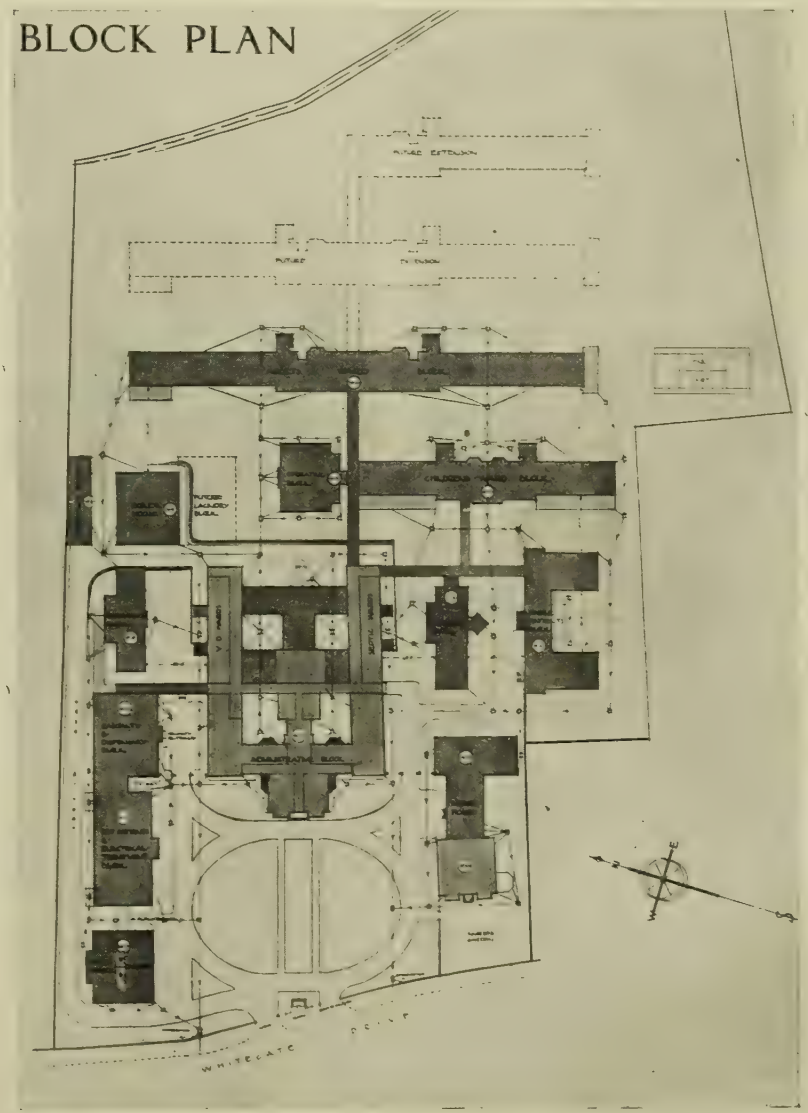
VICTORIA HOSPITAL, BLACKPOOL

full awards in this competition are
n page 352. The following particulars
winning design are extracted from the
of the successful architects, Messrs.
& Gordon:—The scheme has been
d with a view to the erection of an
ate hospital, the layout and design of
are independent of the portion of the
buildings now incorporated in the
Careful consideration has also been
o the method to be adopted in erecting
buildings and at the same time carrying
work of the hospital. The whole of the
ard blocks, out-patients' department,
home, operating theatre, boiler-house
rtuary would be first erected without
ing with the present hospital, and a
ary kitchen and servants' quarters and
tration offices would be provided in a
position during the period the new
and administration offices, &c., are
erected, when the existing wards are
l and patients transferred to new words,
his method of erecting the hospital in
tions would not only be economical, but
preserve the continuity of the work of
spital with the least disturbance of
cy. With the exception of the retention
major portion of the existing hospital
nd adapting same for administration
electrical department, kitchen and
s' quarters, &c., the architects have not
red it desirable or economical to retain
the other buildings existing on the site
e are not suitable for modern hospital
ments.

ision for future extension is indicated on
ns, and provides for a new ward block
eds at the east end of the main connect-
ridor and also a possible future extension
lding over the maternity, observation,
ng and paying patients' blocks, which are
ly one story buildings, but would be
f sufficient strength to permit of an
nal story in all cases.

rials Suggested to be Used.—The founda-
be of Portland cement concrete. The
nerally to be of sound, hard, well-burnt,
d bricks, built in English bond in lime
The walls generally will be faced with
d local red bricks with different coloured
ressings, and those portions so shown
ve dressings, mouldings, &c., of stone.
rs in the new buildings would be of fire-
onstruction with steel joists and rein-
concrete. The sloping roofs would be
with slates and the flat roofs with
laid to falls on concrete All joiners'
penters' work would be of best selected
d yellow deal, and all joiners' details
be flat and dustproof wherever possible
lowing the best hospital practice. The
o wards would be of hardwood stained
lished and finished flush both sides.
ndows to all hospital buildings would be
sements fixed in wood frames the top
open in with quadrants and cheeks, the
ortion of the "Austral" type, so that
ion is obtained without being directly
The windows to boiler-house would be
asements built into brickwork with
to open. Windows to nurses' home
ministration buildings would be deal
shes and frames.

loors to the wards generally would be
tion jointless floors laid on screeding on
sub-floors, and having quarter-round
3 in. radius turned up against walls.
rs to other rooms generally would be
deal batten floors laid on fir battens
top of concrete sub-floors. The floors
ternal corridors, bath-rooms and lava-
ould be mosaic floors, having all skirt-
nded off and turned 6 in. up against
d all bath-rooms and lavatories would
annels formed in mosaic over which
nd basins would discharge. The floor
connecting corridor between ward
would be finished in seyssel asphalt laid
to fall to gutter at sides. The floors to kitchen, scullery, stores and larders would be mosaic.



The walls generally would be finished in hydra-lime plaster and painted, except where heating coils are used, and these would be treated with special plaster. The walls of all bath-rooms, sanitary blocks and lavatories would be finished with "Terrazzo" dado, 6 ft. high, having all corners and angles rounded off to 3 in. radius. The walls to all corridors in ward blocks would have similar dado 4 ft. 6 in. high, and all other corridor walls to have dado 4 ft. 6 in. high in Keen's cement. The walls of main corridor between ward block to be finished fair face with flush pointing in cement. The walls of boiler-house block and laundry would be finished fair faced and distempered.

Heating.—The buildings would be heated throughout on the "panel" invisible system, the heat being radiated into the wards from the ceilings and in other rooms through the ceilings on walls. The heating mains carried from boiler-house through subways to subsidiary mains and would be controlled by valves into different sections.

Registration of Architects.

Mr. E. Guy Dawber, P.R.I.B.A., has addressed the following letter to the Editor of the *Times*:—"Communications from two quarters have appeared in your columns, having reference to the Bill for the registration of architects, which is being promoted by the Royal Institute and is now before Parliament. The nature of these communications indicates that some misapprehension exists as to the scope and effect of the Bill. Following a useful precedent which has recently been established in matters of legislation, a draft Bill was circulated some time ago for the purpose of eliciting the views of associations and other institutions interested in the matter. I am happy to say that, with few exceptions, the Bill is receiving general support. On some details of procedure and machinery, certain helpful suggestions have been made. These have received the careful consideration of the promoters of the Bill, and amendments meeting most of the points raised have been embodied in the Bill, which, it is expected, will shortly be in print. It may be that certain other qualifications of a non-vital character will be asked for on the passage of the Bill through Parliament, and to all such requests careful and courteous consideration will be given.

The one object which the Institute has before it is to raise the standard of architectural education and the qualifications of the practising architect, and with that the public appreciation of good architecture. Only in this way can there be prevented that vulgarisation of town and country to which the attention of civic societies and the Council for the Preservation of Rural England is being so earnestly directed."

Second Premiated Design. By Messrs. Alfred Saxon Snell & Phillips.

SOCIETIES AND INSTITUTIONS

THE FACULTY OF ARCHITECTS AND SURVEYORS.

Rent Restriction Acts.

Mr. A. E. Sockett, barrister-at-law, senior lecturer to this Faculty, delivered an interesting lecture on the Rent Restriction Acts at Exeter and Bristol on Thursday and Friday, February 17 and 18. At the outset, the lecturer said the existing statutes governing the subject must be known by name, and it should be remembered that the lecture was to be confined to the rent-restriction and ejectment portions of the Acts, and would not touch upon mortgages.

Existing Statutes.—There were five statutes in force, namely (1) the Increase of Rent and Mortgage Interest (Restrictions) Act, 1920, known as the principal Act; (2) the Rent Restrictions (Notices of Increase) Act, 1923; (3) the Rent and Mortgage Interest Restriction Act, 1923; (4) the Prevention of Eviction Act, 1924; and (5) the Rent and Mortgage Interest (Restrictions Continuation) Act, 1925. The last-mentioned Act merely prolonged the operation of the other Acts. The Rent Restriction (Notices of Increase) Act, 1923, was only passed to amend the principal Act on an isolated point. Previous to the amendment referred to, the landlord could not get any permitted increase of rent unless he had first terminated the tenancy by a notice to quit; it was not then sufficient, said the lecturer, merely to serve the tenant with a notice of increase of rent. Now, however, the statutory notice of increase of rent was sufficient, and need not be accompanied by a notice to quit. Great care should be taken to use the statutory form of notice of increase under the 1920 and 1923 Acts, and it must be one week's clear notice in the case of an increase of rates, and four weeks' clear notice in other cases. The words "standard rent," said the lecturer, over and over again occurred in the Acts, and unless their meaning was understood it was useless to proceed further

Standard Rent.—Standard rent meant the rent at which the dwelling-house was let on August 3, 1914. If the dwelling-house was not let on that date, then the rent at which it was last let before August 3, 1914. If the dwelling-house was first let after August 3, 1914, then the rent at which it was first let. In other words, the crucial date of August 3, 1914, had always to be gone back to for reference, and only in that way was it possible to understand whether property was or was not subject to the operation of the Acts, or to ascertain what permitted increase of rent was allowed to be added to the "standard rent." Over and over again, in his own experience, cases happened in which a landlord got a new tenant to agree to pay a higher rent, but nowadays the tenant was usually more informed and made inquiries at what figure the property was let in 1914. Adding to this the permitted increase, it could easily be seen whether the landlord was justified in his claim or not.

Dwelling-houses Within and Outside the Acts.—The Acts, the lecturer said, applied only to property the annual value of which was below a specified limit. Speaking generally, they applied only to a house, or part of a house, let as a separate dwelling where either the "standard rent" or "the rateable value" did not exceed in London £105, and in the provinces £78. In Scotland the limit was £90. The test, therefore, was not only rent, but also rateable value. For example, property was within the protection of the Acts even if the rent exceeded £78 in the provinces, if in fact the rateable value did not exceed this figure. Rent and rateable value were two independent criteria to be considered. Probably one of the most important points for consideration was the class or kind of property protected by the Acts. To what extent did premises occupied for business purposes fall within the Acts? It was quite true that the Acts were passed for the purpose of keeping a roof above people's heads during the great house shortage, but although this limited protection to property occupied as a dwelling-house, it did not mean that premises occupied also for business purposes were outside the Acts. Otherwise, said the lecturer, how could public-houses be protected? In the case of a public-house, the dominant purpose of occupation was to carry on the business of selling drinks, and residence was only an occupation of a minor degree. Dominant user was not, it seemed, a true guide; the real test probably was, "Are the premises substantially and *bona fide* used as a dwelling-house, and not merely occasionally so used?" If they were, then the property was within the Acts, even if there was also a business occupation. Terms and conditions of letting must also be taken into account, and sometimes the fact as to whether structural alterations had resulted in a change into business premises. If premises were let off for business purposes only, then they would not be within the Acts if they were used for residential purposes in breach of contract. On a question of use or disuse of premises for residence on business, the point also probably had to be considered whether a change of status in the premises was brought about by and with the consent or acquiescence of the landlord or not.

There were provisions in the Acts excluding certain dwelling-houses. These were (1) dwelling-houses *bona fide* let at a rent which included payments in respect of board, attendance, or use of furniture; (2) dwelling-houses where land was included of rateable value not less than one-quarter of the rateable value of the house, as in the cases of farms and market gardens; (3) where the rent payable in respect of any tenancy of a dwelling-house was less than two-thirds of the net rateable value thereof; (4) certain new or reconstructed houses; and (5) decontrolled property.

Decontrolled Property.—Decontrolled houses were provided for by the 1923 Act, section 2. The section says that "where the landlord of a dwelling-house to which the principal Act applies is in possession of the whole of the dwelling-house on the 31st July, 1923, or comes into possession of the whole of the dwelling-house at any time after 31st July, 1923, then from and after 31st July, 1923, or such later date when the landlord subsequently comes into possession, the principal Act shall cease to apply." A house was not, however, decontrolled if the landlord got possession under an order or judgment for non-payment of rent. To get property decontrolled it was necessary for the landlord to get actual physical possession. Actual entry on the premises at the termination of a tenancy was the best way, although getting the key of empty property was also sufficient. But it was not sufficient merely to inspect empty property from the outside, without possession of the key or actual entry on the property.

Permitted Increase of Rent.—The amount by which the increased rent of a dwelling-house to which the Acts applied might exceed the "standard rent" was shown by certain permitted additions, viz.: (1) In respect of improvements or structural alterations (as distinct from decoration or repairs), 6 per cent. on expenditure before July 2, 1920, and 8 per cent. on expenditure after that date; but the tenant might apply to the Court on the ground that the expenditure was unnecessary; (2) an increase of rates payable by the landlord might be added; (3) a further set of percentages on the "net rent" might be added, that was to say (*a*) 15 per cent. of the net rent in any case, and (*b*) a further 25 per cent. of the net rent where the landlord did the repairs, or a lesser percentage if the landlord was responsible for part and not the whole of the repairs. The provision for 15 per cent. and 25 per cent. made up 40 per cent., which, the lecturer said, most landlords thought they could add on to the standard rent as a matter of course. This was a wrong construction, however, and only 15 per cent. should be on as a matter of course. The bala 25 per cent. depended on the fact as was responsible for repairs. Where the lord was not solely responsible for repa notice of increase of rent could be give a portion of the 25 per cent. until the had been settled by agreement of the or the decision of a County Court ha given on the matter.

Security against Distress and Ejectm The lecturer concluded his remarks ferring to the subject of distraint and ment. Where property was subject to t tection of the Acts no distress for rent, b could be levied except with the leave County Court. The tenant was also pr from ejectment, and an order of the Co such a purpose could only be obtain specified grounds, a list of which wo found in the Acts. Even on such grou order could not be obtained unless the considered it reasonable to make the This was a provision frequently for with a consequence that many landlord under the wrong impression that they "as a matter of course" get possessio tenant was in arrear with his rent or ha mitted a breach of covenant. This was and possession would only be given Court in any case where it consid was reasonable to make the order.

INCORPORATED ASSOCIATION ARCHITECTS AND SURVEYOR

Annual Dinner.

THE annual dinner of this Association w on Friday last at Stewart's Restaurant, street, when the President, Mr. W. Campbell, occupied the chair. Among present were Messrs. R. S. Gledhill, H. A. —Beryl, C. H. Taylor, Goodman, Bowma Jones Athoe, Herbert Kidd, Bramall, L. V son, C. E. Wright, Tilley, Phillips, Taske Jessamine, Vizer, Puzey, Gibbens, Sa Creegan, Foster, Gale, Barton, Bidwell, Fa J. W. Pate, Johnson, Peppiatt, C England, Arnold, Buckingham, Upfield Clarke, Hilder, Pether and E. Holden.

The loyal toast having been honoured Mr. L. W. Robson, A.C.A., propos toast of "The Association," said they that the Association was an undoubted As their President had said on another o they had no desire to belittle the valua of the older architectural body, but t that there was much useful work that Association such as theirs could do. Th ciation had a very live membership, gathering proved. The ideals of the Ass were of the soundest, and the first was the interests of the public.

The President, in reply, said it was pleasure to him to appear before them second year as President of so strong a a body as the Association. He hop before long they would receive notice to t that negotiations had been complet regard to new headquarters. At th dinner their membership amounted to s hundred odd; he was gratified to be report that it now exceeded one th Turning to the question of Registrat speaker said that whatever he might say regarded as his personal views. On the of Registration they were no doubt ag the question of the application of that was one that required very careful cons from the point of view of possible effects allied professions as a whole. He ass hearers that they as an Association w alive to those possible effects. The Bi was coming before the House of Com April 8, was a Bill dealing primarily w tects. They, as an Association, consi only of architects but surveyors and surveyors, had to study it from the poi of the profession as a whole. After thi of consideration one would have thoug Registration was to be realised the B have been more carefully thought should have considered the opinions of thousands of bona-fide practitioners-

s unattached. Sir Geoffrey Butler had his duty as a Member of the House of us to state that the R.I.B.A. could "get a good deal of what they wanted ement with representative organisations cared to spend the time and take the to try." They of the Association had nes invited the R.I.B.A. to give them a ce to discuss the Bill. The latest com-ion they had had from the Institute was fect that they were carefully considering ter—that was, the Association's amend-not the question of a conference. He hopeful if they did not get a conference Bill would go through. The Association something on modern lines. In their dual professional education was a much ystem than cramming. For an institu-o forward with a Bill while representing ne seven or eight thousand practitioners getting at the crux of the matter at all. he R.I.B.A. themselves would be more with a Bill representing the various of the profession. Unless they of the ion received consideration they had no ive but definitely to oppose the Bill.

I. A. Heath then proposed the toast of isitors," and Mr. W. Mitchell, P.A.S.I.,

E. Holden then read a paper on "Lead, Home Office Regulations."

Housing Schemes.

ittee of the Council of the Surveyors' n has been considering the question hat part of the population whose nt does not permit them to live at from their work can be housed in ral positions in large towns. They that the full number of persons dis-n hardly be housed on the cleared hey suggest that, subject to proper conditions as to light, air space, ventilation and planning, replacement should be the ideal at which to aim. For this purpose, and subject to the above proviso with regard to light and air, they attach great importance to economic lay-out. Unless the necessity for this is recognised by those responsible for approving lay-out plans in central districts, they fear that persons having to reside near their work will look for other accommodation in the neighbourhood and thus tend towards the overcrowding of existing property in the surrounding districts.

SOUTHEND SOCIETY OF ARCHITECTS.

Southend and District Society of Architects held its inaugural meeting at the School of Arts and Crafts recently, when Sir Charles Nicholson delivered his first presidential address and Major Harry Barnes, F.R.I.B.A., spoke on architects and architecture generally. "Many happy returns of the day," was the President's opening wish for his new Society, and he went on to express the hope that in time they would become affiliated to the R.I.B.A., to which organisation many members already belonged. Flourishing provincial societies had been instituted in the large towns, but up to the present there had been nothing of the kind in Essex or in the counties around London. He thought that the better-class work was found in those districts where there existed a strong provincial architects' society. Their chief object was to improve the local standard of architecture. It was an advantage to any locality to possess a few fine buildings, but it was a much greater advantage when the general run of the ordinary buildings should be practical and economical—by which he did not necessarily mean cheap, but rather tasteful. Primarily, then, it was their object to improve the standard of building in the town, and he hoped they all would contribute to the stock. They desired to help forward education and to further the interests of younger men and women who aimed at adopting the career of an architect or one of the kindred arts. They trusted, too, to exercise a beneficial effect upon craftsmanship in the neighbourhood and, if possible, to create a demand for well-made material and fittings, so that the citizen and speculative builder might at least have the choice of goods that were not merely showy and shabby. They freely offered their services in an advisory capacity both to public bodies and private individuals upon matters where it was felt that such advice might be of assistance to the community. At the same time they felt bound to uphold the standards set by the R.I.B.A. regarding etiquette.

Major Barnes claimed that their Institute was the greatest professional organisation under the British flag. It was in the closest possible relationship with architects in every part of the Empire where the English tongue was spoken. They belonged to a profession which was more than a profession—it was a great art. And in their work they wanted to bring out that fact and its importance to their private and public life. The more people understood about architecture, the more they would appreciate it, the more they would desire it. At the back of their minds, if the public desired it, they would employ architects, and in the end they (the architects) would not come badly off. They could not have a great civilisation without great architecture—it was really the hall-mark of civilisation. In Southend they had a great chance. They had almost virgin ground upon which to work and they had in that neighbourhood very great opportunities. The fact that they had got such a Society was a propitious thing for the Borough

Mr. C. Neil then handed to Major Barnes, to present to the President, a badge of office, which had been designed by Mr. Thomas. In the course of his observations, Mr. Neil said that in Southend the speculative builder had had to erect streets and streets of houses all of the same elevation at the cheapest possible price in order to attract people to the town. But that necessity, he was glad to say, was now at an end.

Handing the medallion to Sir Charles, Major Barnes congratulated the Southend society upon having a most distinguished architect as its President.

GARDEN CITIES AND TOWN-PLANNING ASSOCIATION.

The twenty-eighth annual general meeting of this Association was held at the R.I.B.A. 9, Conduit-street, on February 25. Mr. Cecil Harmsworth (President of the Association), in the course of his remarks, said he thought they had had a very memorable year; they had seen the coming-of-age of the garden city at Letchworth, which now took its place among the important rural towns of this country. Letchworth was a sound financial proposition; he held that to be of the essence of the movement. Having referred to the knighthood conferred upon Sir Ebenezer Howard, the speaker said a great source of gratification was found in the growing friendship of the Minister of Health. Mr. Neville Chamberlain had thrown himself whole-heartedly into the cause of the garden city movement on more than one occasion during the past year. He (the speaker) hoped the State would decide to assist or to take the major part in the promotion of garden cities.

SOUTH WALES INSTITUTE OF ARCHITECTS.

(Western Branch.)

The annual general meeting of this Institute was held at the Hotel Metropole, Swansea, on Wednesday, February 23. The work of the year was reviewed by the Chairman and the Honorary Secretary.

The following officers and members of the Executive Committee were re-elected :—

Chairman, Mr. C. Russell Peacock, F.R.I.B.A.; Honorary Secretary, Mr. J. Herbert Jones, F.R.I.B.A.; Honorary Treasurer, Mr. G. R. H. Rogers, L.R.I.B.A.; and Honorary Auditor, Mr. Ernest E. Morgan, A.R.I.B.A.

Executive Committee: Mr. C. S. Thomas, F.R.I.B.A.; Mr. H. C. Portsmouth, F.R.I.B.A.; Mr. S. R. Crocker, L.R.I.B.A.; Mr. O. S. Portsmouth, A.R.I.B.A.; Mr. D. F. Ingleton, L.R.I.B.A.

Representatives of the Associates and Students: Mr. C. W. Geddes and Mr. B. W. Ellis.

The following members were elected to represent the Branch on the Council of the South Wales Institute of Architects: Messrs. J. Herbert Jones, F.R.I.B.A.; C. Russell Peacock, F.R.I.B.A.; H. C. Portsmouth, F.R.I.B.A.; O. S. Portsmouth, A.R.I.B.A.; S. R. Crocker, L.R.I.B.A.; G. R. H. Rogers, L.R.I.B.A. Associates' and Students' Representative: Mr. C. W. Geddes.

The members were entertained to tea by the Chairman, Mr. C. Russell Peacock, F.R.I.B.A., and afterwards adjourned to the Deffett Francis Gallery for a lecture by Mr. W. S. Purchon, M.A., A.R.I.B.A. (Head of the School of Architecture, Cardiff), on "The Work of Sir Christopher Wren."

Exhibition of Architects' Working Drawings.

In the notice of this exhibition at the R.I.B.A., which we published in our issue for February 18, the name of Mr. Walter Tapper, A.R.A., F.R.I.B.A., should have appeared in the place of Mr. Michael Tapper, A.R.I.B.A. The exhibition opened on Monday last and will close on Friday next.

An Old Tithe Barn.

The East Riding Antiquarian Society is about to make a public appeal for funds to preserve the old Tithe Barn at Easington and utilise it as a museum of old farming and cottage appliances. Aisled and thatched, the barn was erected about 1500, and is one of the few of its kind remaining intact. With the consent of the Ecclesiastical Commissioners it is proposed in future that the barn shall contain exhibits relating to folk-lore and old-time farming implements.

ILLUSTRATIONS

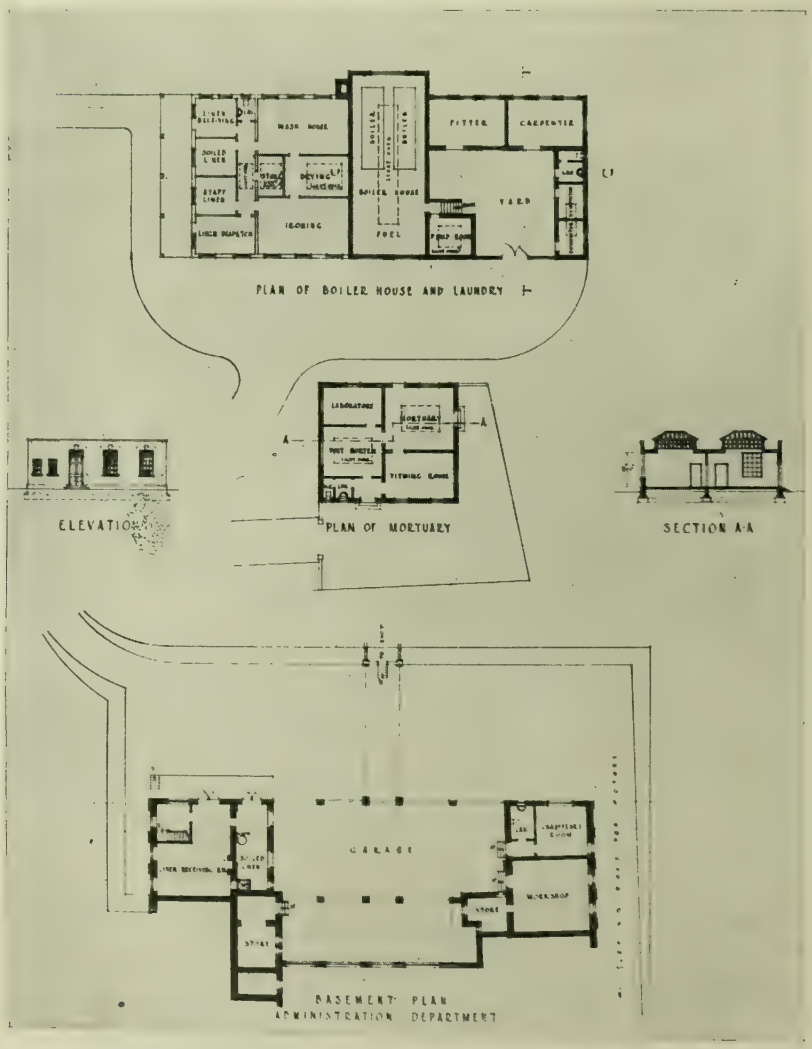
St. Mary Redcliffe.

We give this week an illustration by Mr. A. C. Fare of the beautiful church of St. Mary Redcliffe, Bristol, which is in serious and urgent need of repair, a sum of at least £30,000 being required. To facilitate the raising of the money, the Canynge Society, which was first formed in 1848 and operated till 1873, has been re-formed. At a recent meeting, Sir George Oatley, who has been reporting on the fabric periodically since 1912, stated that the great trouble was with the masonry, although there were other parts which required repair, such as the whole of the glazing of the clerestory windows. There were three main essentials (1) to preserve structural soundness, especially in cases where this was vital, as, for instance, the flying buttresses; (2) to prevent possible danger to persons and damage to the fabric by falls of decayed fragments of stone; and (3) to reproduce in the new and sounder material, before it had become so far perished as to be unrecognisable, details of moulded and carved work. With regard to what was left of the original work—and there was some masonry which still bore the ancient tool marks—he deprecated any renewal unless imperative to sustain the structure, but recommended coating with a preparation of lias lime as a preservative. It was reassuring to find that the more ancient work had endured the ravages of time far better than the modern renewals.

We feel that such an object as the restoration of a building known throughout the world to be, in the words of Queen Elizabeth, "the fairest parish church" in her kingdom, cannot fail through lack of proper financial support.

Nos. 9-13, Fenchurch Buildings.

This new block of City offices has recently been completed from the design of Messrs. Richardson & Gill, FF.R.I.B.A. It faces on to a narrow court, the buildings on the opposite side being erected to a similar height, and all cornices and projections likely to cut off light to the court have been omitted. The general contractor was Mr. C. W. Ward, and following is a list of the sub-contractors: Shaw's Glazed Brick Co., white terra cotta; The Express Lift Co., lift; Elliott & Sons, joinery; Chas. Walker & Co., Hopton stone in entrance hall; Di & Carr, heating and hot-water work; The Manufacturing Co., windows; Redpath, & Co., steelwork; Ragusa Asphalte Pavi asphalt.



All the models for casting in terra cott carried out by Mr. P. G. Bentham, A. The consulting engineer was Mr. S. Bylar

Blackpool Hospital Competition.

We give on page 359 some extracts fro report of the winning architects in thi petition, Messrs. Gibson & Gordon. T awards are given on page 352.

Perth Academy Competition.

We illustrate this week the winning de this competition, by Mr. T. Aikman A.R.I.B.A.

Victoria Hospital, Blackpool: Competition for Remodelling and Extension. First Premiated Design. By Messrs. J. S. Gibson & Gordon.

MEETINGS

FRIDAY, *March* 4.

Royal Institution of Great Britain.—Sir H Jackson on "Some Colouring Agents in and Glazes." At 9 p.m.

Royal Sanitary Institute.—Mr. E. Wi "Calculations, Measurements, and Pla Sections." At 6 p.m.

Northern Architectural Association.—L by Professor A. E. Richardson, F.R.I.B. 7.30 p.m.

Glasgow Architectural Craftsmen's So Mr. M. Webster on "Stained Glass." Royal Technical College. 7.45 p.m.

MONDAY, *March* 7.

Royal Sanitary Institute.—Mr. J. H. Cl "Museum Demonstration—Gullies and At 6 p.m.

Surveyors' Institution.—Discussion on hold Reform." At 8 p.m.

Society of Engineers.—Mr. M. E. Ger "Raising of a 1,250-ton Coal Bunker afte Subsidence." At Burlington House, 5.30 p.m.

TUESDAY, *March* 8.

Surveyors' Institution.—Annual Dinn Connaught Rooms, Great Queen-street, 7.30 p.m.

Institution of Electrical Engineers.—M T. Walsh on "Illuminating Engin Also Mr. H. T. Harrison on "Problems Lighting by Electricity." 17, Albert Manchester. 7 p.m.

Institution of Civil Engineers.—Discu "The Tansa Completion Works for the supply of Bombay," by Mr. A. Watson bridge. At 6 p.m.

Royal Institute of British Architect fessor C. H. Reilly on "Liverpool Cat At 8 p.m.

WEDNESDAY, *March* 9.

Edinburgh Architectural Association G. L. Pepler on "Regional Town Pl At 8 p.m.

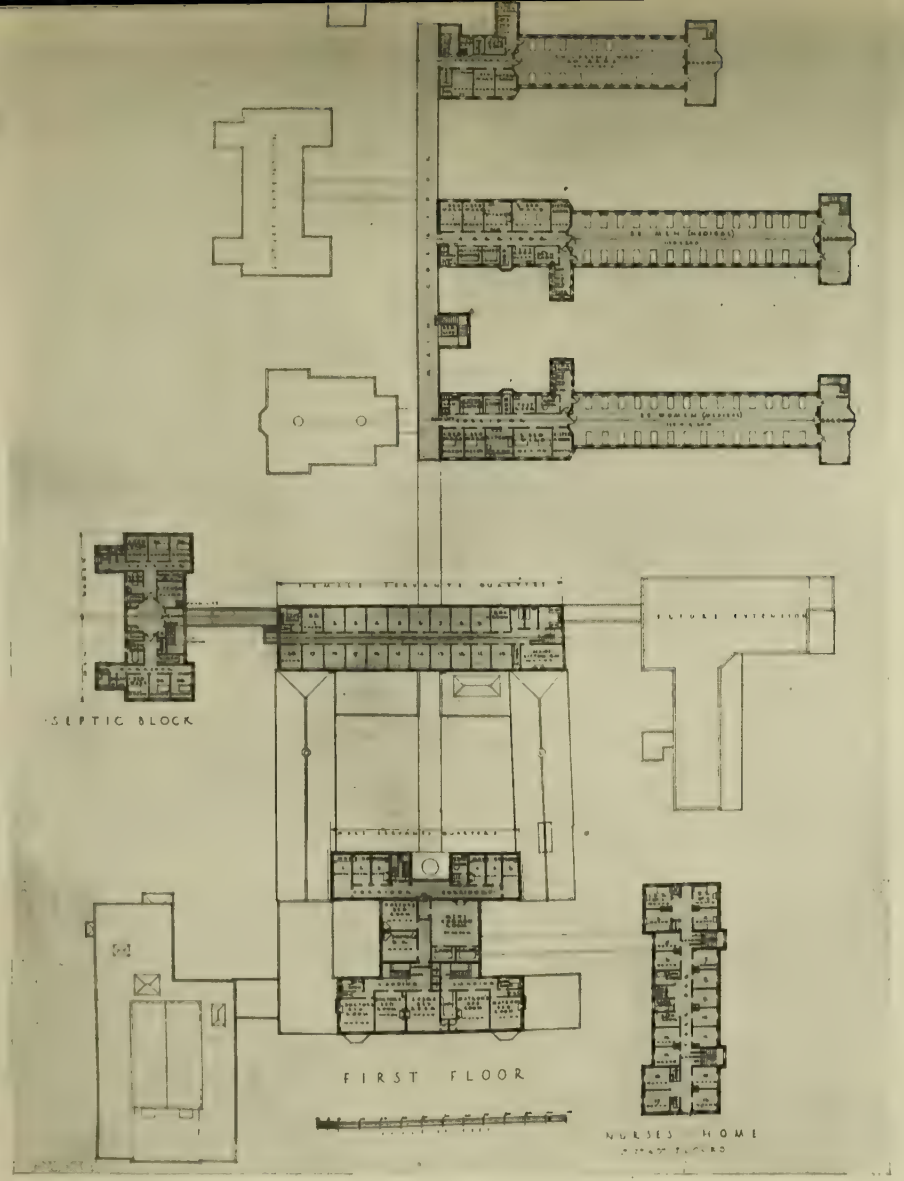
Liverpool Architectural Society.—Mr Beckwith on "A Visit to Schools in Ho Belgium."

St. Paul's Ecclesiological Society.—M Wharton on "Trips in South-Eastern At 9, Conduit-street, W.1. 8 p.m.

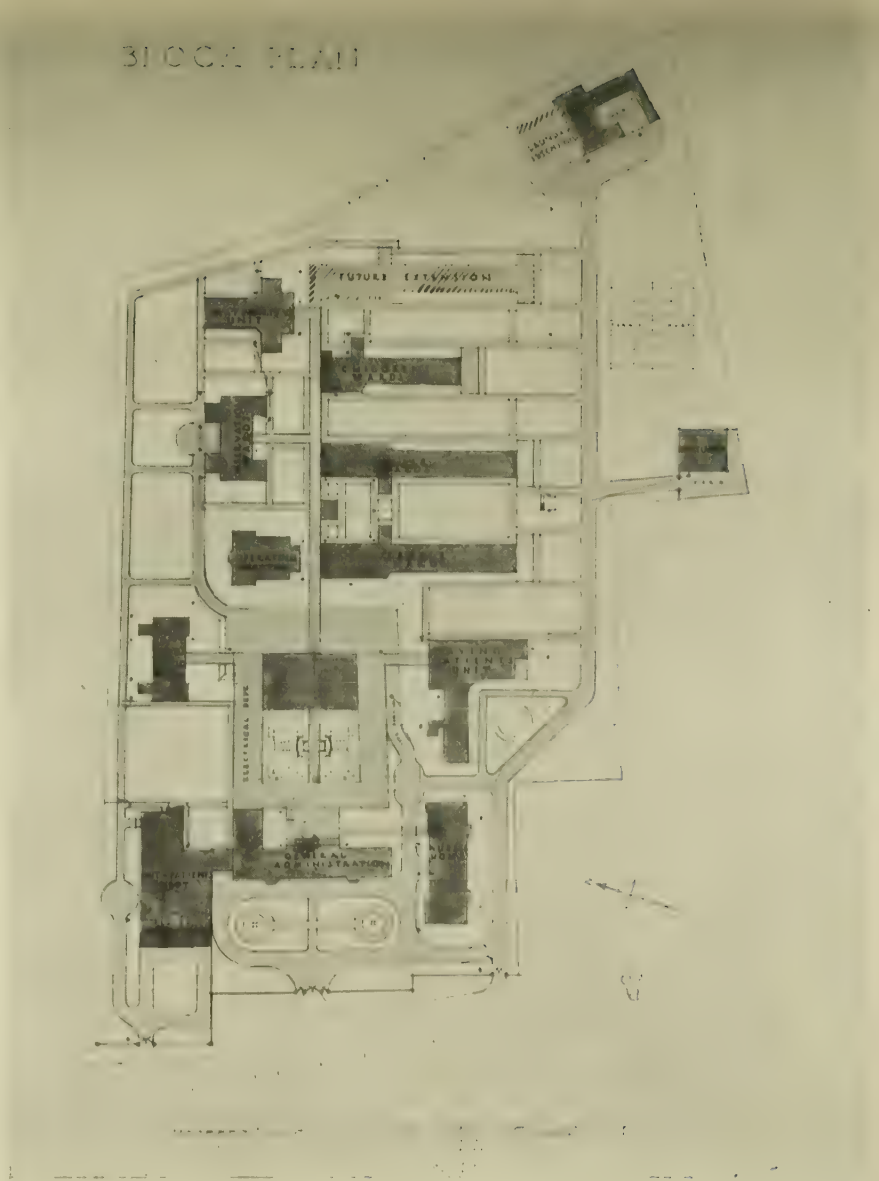
Institution of Civil Engineers.—Disc "Traverse Surveys," by Mr. A. H. At 6 p.m.

THURSDAY, *March* 10.

The Liverpool Architectural Society Dinner. At the Adelphi Hotel. 7.3



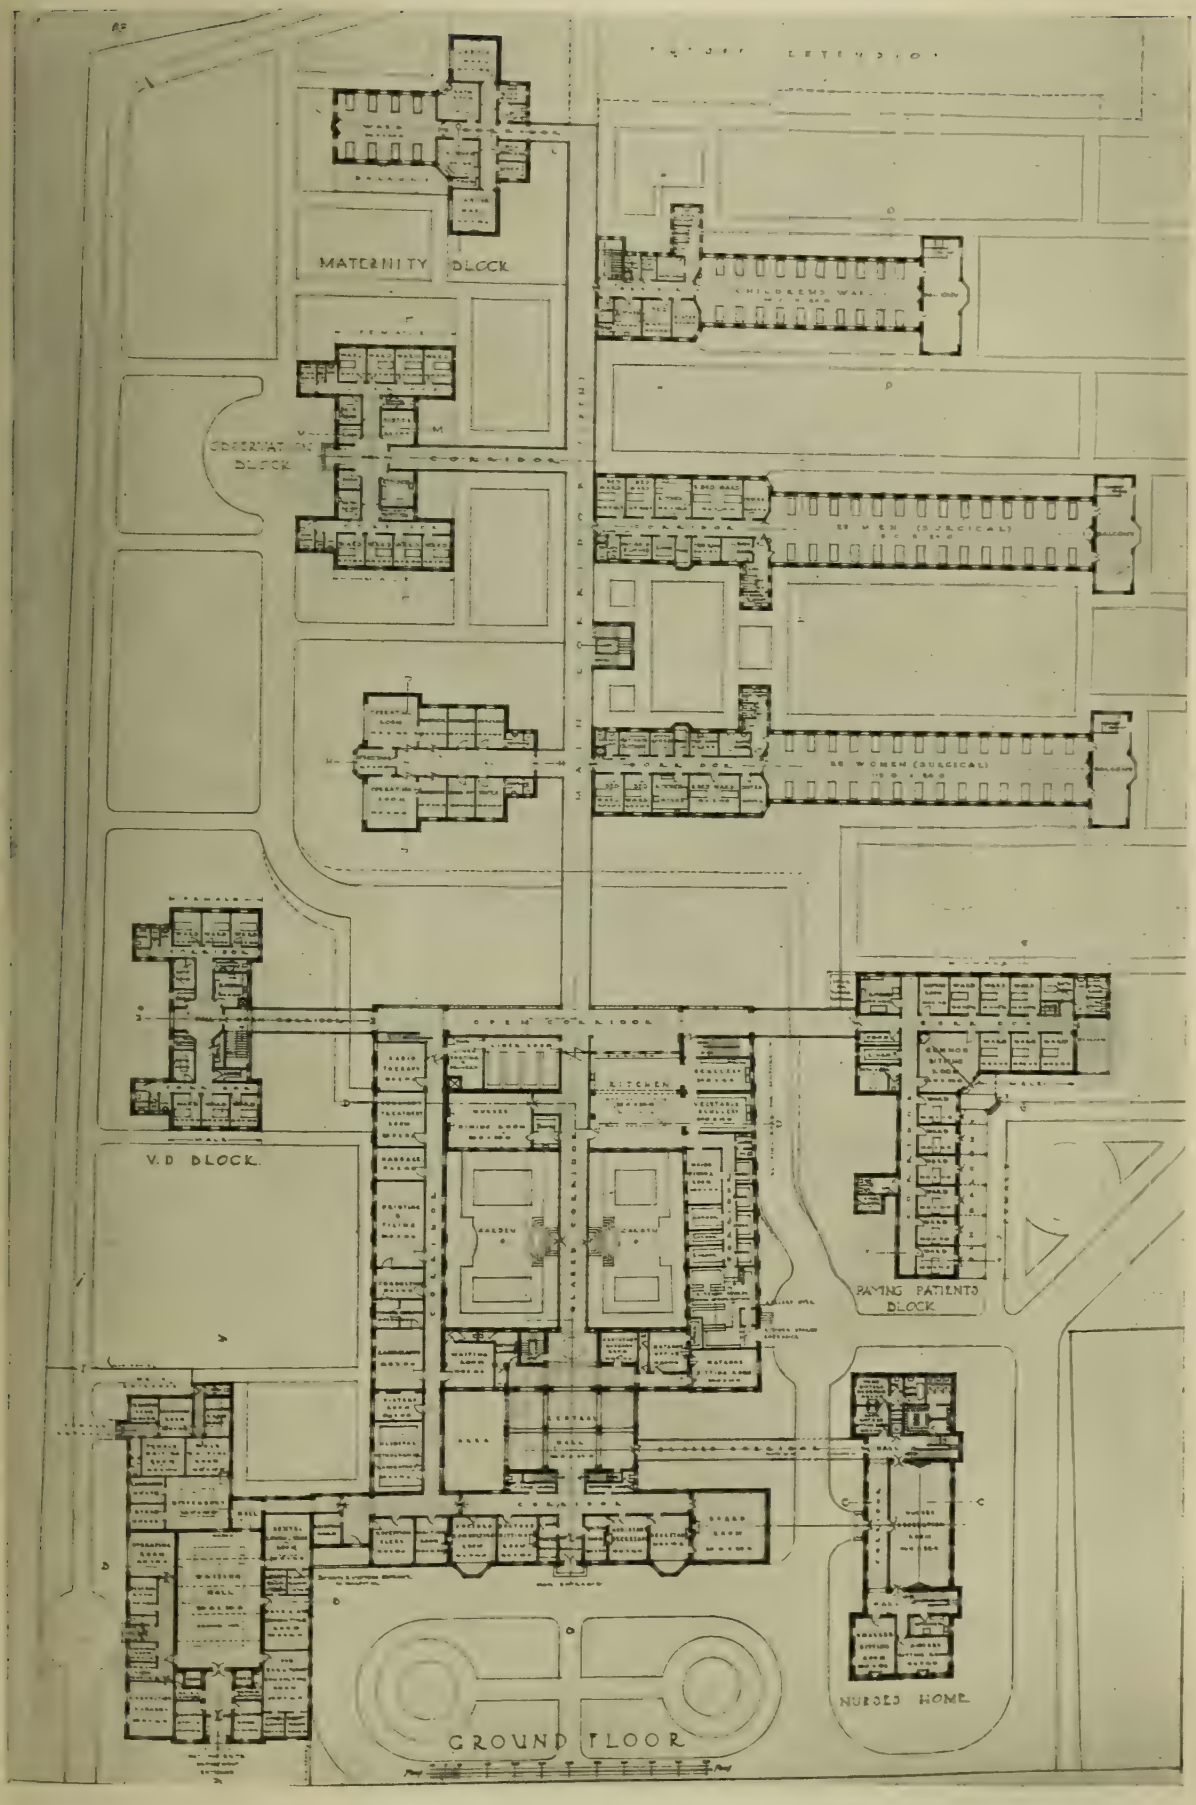
London County Council.—Mr. H. Je "English Furniture, 1770–1810." Museum, Kingsland-road, E.2. 7.30



Society of Antiquaries.—Ordinary At 8.30 p.m.

FRIDAY, *March* 11.

Royal Institution of Great Britain Macdonald on "The Wall of Had 9 p.m.



Royal Sanitary Institute.—Mr. F. on "Building Sites." At 6 p.m.

CONSTRUCTIONAL STEELWORK SIMPLY EXPLAINED.—XX

By OSCAR FABER, O.B.E., D.Sc., M.Inst.C.E., etc.

[Editorial Note.—This series, which will be published in book form later, is intended to present the problem in so simple a form as to be readily understood by those having no special engineering training.]

Standard Sections.—It will be obvious standard sections have to be adopted which in practical design a selection to be made. Steel joists and other sec- are made by rolling the red-hot steel through a succession of specially ed rolls so as gradually to squeeze the l out until after passing the last rolls as the desired shape of the standard on. It will be quite clear that these are extremely costly, and it would a very large order indeed to justify adoption of a section which was not standard; and even in such cases a of some months would occur while necessary rolls were being prepared.

e choice of standard sections is a er of great importance, as some sec- can be much more economical and rally suitable than others. A com- ly new series of British sections was ted by the B.E.S.A. three or four years and are generally referred to as the British Standard Beams. These from those previously in general use, ly in that they are somewhat lighter rule for a given depth. Thus the New sh Standard 24 × 7½ only weighs . per ft. run instead of 100 lb. (old), on the other hand only has a section modulus of 203.6 instead of 221.1. The consequence is that to obtain a beam of given strength it is generally necessary to adopt a section an inch or two deeper than would have been necessary with the older sections. As deeper beams are generally more economical (*i.e.*, lighter for a given strength) than shallow ones, it follows that the adoption of the New British Standard does in general result in a somewhat more economical design than the old. This greater economy is, however, obtained at the cost of some slight increase in the depth of girders, and in the case of buildings on very valuable sites, where the maximum headroom on the various floors is important, this increased depth may outweigh the reduced cost of the steelwork. There are, however, the more numerous cases where a few inches in headroom is of less importance than a reduced weight and cost of steelwork, and on the whole there is no doubt that the New British Standards suit the general requirements of the steel trade better than the old.

The properties of the New British Standards are given in the adjoining table. In column 10 is given the safe resisting moment for a stress not to exceed 7½ tons per sq. in. In the following column is given the safe shear on the beam stressing the web to 5½ tons per sq. in. The adoption of this stress will in some cases entail stiffening the webs if we adopt the stress limitation in the curve of Fig. 25. Cases where such stiffening would be necessary are enclosed in brackets. It should be mentioned that the adoption of this curve is not required by the L.C.C. General Powers Act of 1909, but is strongly recommended by the author. The next column gives the safe shear on the beam if the joists are used without stiffening, but adopting the reduced stress per square inch appropriate to their particular ratio of depth to web thickness in accordance with Fig. 25.

BOOK REVIEWS

Everyday Life in Anglo-Saxon, Viking and Norman Times. By Marjorie and C. H. B. Quennell. (London: B. T. Batsford.) 5s. net.

This volume represents the fourth and the last of the well-known Everyday Life series. The authors have now completed their task of bringing up their story to the beginning of the period dealt with in their first two volumes "Everyday Things in England." The present volume, beginning with the later Iron Age, takes us through to the Norman Conquest. It is almost unnecessary to say that the object of the authors is to show man at work, feeding, and clothing himself—in short to tell the story of the practical efforts and accomplishments of the human race. In this they have succeeded. This book is attractively written and illustrated with a number of charming and interesting sketches.

The authors are to be congratulated upon an achievement which must have involved prodigious labour and research. In addition to providing a compendious survey of English life and work in a manner not before attempted, they have done an important work for the popularisation of architecture, especially in their volumes relating to more recent periods. They have constantly insisted upon the importance of plan in any consideration of architecture, and as their books have had, and are continuing to have, a wide circulation among the younger generation, their power for good in inducing an enlightened appreciation of architecture must have been considerable.

The Concrete Year Book, 1927. Edited by Oscar Faber, O.B.E., D.Sc., M.Inst.C.E., and H. L. Childe. (London: Concrete Publications, Ltd.) Price 2s. 6d.; by post, 3s.

This well-known annual has been still further enlarged to 440 pages, most of which is due to additional matter in the Directory Section, which has been further classified for ease of reference. The volume consists of Handbook, Directory, and Catalogue Sections. The Handbook Section contains authoritative chapters on practically every aspect of concrete and reinforced concrete design and construction, embracing the latest practice at home and abroad. Tables for reinforced concrete design, a great deal of memoranda of everyday use, a complete bibliography of books on concrete and allied subjects, &c., are included. The information given is all standard practice or recommendations formulated after thorough investigation by competent bodies, and no attempt is made at giving individual opinions. The Directory Section is classified into sections giving particulars of all firms connected with or catering for the concrete industry, and these sections are further classified under the heading of the products supplied. A useful feature is a complete list of trade names and brands in use in the industry, with the names and addresses of the proprietors. The Catalogue Section, of over 200 pages, contains full particulars and illustrations of machinery, products, &c., used in the industry

PARTY WALLS: PRACTICE AND DECISIONS

CHAPTER IX.—DILAPIDATIONS IN CONNECTION WITH PARTY WALLS.

BY J. DOUGLAS SCOTT, A.R.I.B.A.

So far as the writer is aware, it has never been decided whether a lessee is bound to repair a party wall under a general covenant to repair where party walls are not expressly mentioned. As all that is usually demised to a lessee is the undivided moiety of a party wall, it may well be argued that a party wall being no more part of one house than of the other adjoining one, and since in the absence of an agreement to the contrary each lessee is only bound to repair his own premises, it would seem that he would not be liable to repair a party wall which is not his separate property but the joint property of the two houses. Moreover, as it is now the more usual custom to insert, in addition to the general repairing covenants in a lease, a separate covenant binding the lessee to pay a proportionate part of the expense of repairing the party walls, it would seem that a lessee is not considered liable to repair party walls, under a general covenant to repair, otherwise there would be no necessity for an express covenant.

Under such an express covenant that will represent the utmost of the lessee's liability, and will exclude liability under the other covenants in respect thereof (Arding *v.* Economic Printing Co.).

Where in consequence of the natural action of time, repair became practically impossible and a house was condemned as a dangerous structure, it was held that, under the general covenant to repair, neither the tenant or landlord was liable for rebuilding. (Wright *v.* Lawson, 1903, in the case of a tenant; Torrens *v.* Walker, 1906, in the case of the landlord.)

Where in consequence of the natural action of time a house became so defective that it was condemned as a dangerous structure and was demolished, the landlord was awarded damages for breaches of the covenants to repair down to the time when further repair became impossible (*re* Serle, 1898). The same principles would apply in the case of a party wall.

In a somewhat similar case, but where it was proved that the walls had been built on timber planks laid on a muddy soil, the Court of Appeal held that the lessee was not bound to rebuild as the only method of repair would be by building up from the gravel below the mud and so resulting in a different structure from the original (Lister *v.* Lane, 1893).

The lessee, under a covenant to repair, uphold and maintain, was held liable for the cost of rebuilding a defective wall and was not entitled to set up the defence that it became defective by reason of its age and the effect of the elements (Lurcott *v.* Wakeley, 1911).

A landlord is not liable to do any repairs to the premises let by him unless he has agreed in writing to do so, and then only after notice of the want of repair which requires attention (Torrens *v.* Walker, 1906).

The exceptions to this ruling are where the landlord has expressly or impliedly warranted the premises as fit for any special purpose and non-repair would render them unfit for such purpose, and in the case of houses let within the rent limits imposed by the Housing and Town Planning Act, 1909, and subsequent Acts, for any tenancy other than a repairing tenancy for not less than three years certain.

A covenant to repair and keep in repair all external parts of the demised premises will extend to a party wall between the demised premises and the adjoining one. In the case of Green *v.* Eales it was held that such a wall was legally speaking an external wall, and that the external parts of the premises are those which form the enclosure of them, and that it is immaterial whether those parts are exposed to the atmosphere or rest upon and adjoin some other building which forms no part of the demised premises.

A tenant in common of a party wall will not be liable in an action for waste where he pulls it down and rebuilds as good a wall in its place as there will be no lasting damage to the freehold and no destructive waste can be alleged. (Standard Bank of British South Africa *v.* Stokes, 1879).

It is a breach of the covenant to make a doorway or opening through a party wall without the freeholder's license and keeping it open when made is a further breach, as it is held that the making of such doorway or opening is a partial destruction of the demised premises and a covenant to repair, uphold, and maintain and keep in good repair implies a duty not to destroy the demised premises.

TRIBUNAL OF APPEAL

BUILDING BEYOND STATUTORY HEIGHT.

THE Tribunal of Appeal sat at the offices of The Surveyors' Institution, 12, Great George-street, Westminster, London, S.W.1, on Thursday, February 17, to hear an appeal under Section 48, sub-section 2, of the London Building Act, against the consent of the London County Council of July 26, 1926, to the erection of a building at Nos. 273–287, Regent-street (to be known as Roxburgh House), of a greater height than that prescribed by the said Act. The Tribunal consisted of Mr. A. A. Hudson, K.C. (Chairman), Sir Banister Fletcher, F.R.I.B.A., and Mr. Dendy Watney, F.S.I., and Mr. C. H. Love (Clerk). Mr. A. M. Trustram Eve appeared on behalf of the appellants, and Mr. E. J. Rimmer for the respondents.

During the course of his remarks Mr. Eve said the appeal dated August 13, 1926, had been put forward by his clients, who were the trustees of the late Mr. J. A. Michell, the owners of 999 year leases of three properties in Great Castle-street, and three in Princes-street. The trustees felt aggrieved that the London County Council had given consent to the building in question being built to a greater height than that fixed by Statute, viz., 87 ft. instead of 80 ft. He submitted that in this particular case the Statute fixed a very high and liberal margin, and if it was desired by any owners of property to exceed that margin, very clear and good reasons should be given as to why the prescribed limit should be exceeded. The height of the original building was 47 ft. His clients were the owners of the property backing on to the building which was being erected. Between the two buildings there was a very narrow right of way, which in one part measured 9 ft. 2 in., and in another 13 ft. 2 in. He contended that even if a building was erected to the limit prescribed by the legislature, it would seriously menace his clients' rights to light and air, and if the respondents were permitted to exceed that height, it would further aggravate the position. The ground landlords were the Crown, against whom there was no question of rights of light. Assuming that the ground landlords had been private individuals, and there had been a building of 47 ft. high pulled down, his clients, as owners of the lights facing Roxburgh House, would have been entitled to go to the High Court and obtain an injunction against the owners of the property putting up a building higher than 47 ft., because it would be seen on inspection that anything like a building 80 ft. in height would be a very serious menace with regard to light. His clients considered that the new building had quite ruined the light to the windows on the ground and first floor of their property which backed on to the building in question. He therefore pleaded that the Tribunal should rule that there was no justification for the respondents desiring to build to a greater height than the Statute had laid down.

Mr. Rimmer stated that the actual height of the building for which consent had been obtained was 86 ft. 6 in., and the progress of the work beyond 80 ft. had been stopped pending the hearing of the present appeal. There had been a large amount of correspondence betw the parties, and the appellants complaint ri through had been against a building being erec higher than the old building. It had b suggested that it was unfriendly that his clie should build higher than three or four flo He contended that the real complaint was t his clients were erecting a substantially hig building than the old one. As a matter of fa his clients could erect an even higher build than prescribed by the provisions of the A because they could build two stories in the re which commenced at the 80 ft. level. W regard to the damage to light of the windo of the appellants' property, he stated that clients' architects had put forward cert proposals to meet that objection. He conten that by his clients building a vertical wall white glazed tiles the appellants would rec reflected light of greater intensity than hith existed. His submission was that they had to a stage when the reflected light was so str that a mere addition of 6 ft. or 7 ft. would ca no obstruction. His contention was that appellants had not made out a substantial against the erection of the building to the heig consent for which had been given by the L.C He asked that the Tribunal should uphold consent which had been granted, and enable work to be completed.

During the hearing expert evidence was s mitted by both parties. After a brief adjou ment to consider the matter, the Chairm announced that after giving careful considerat to the arguments put forward by Mr. Eve a Mr. Rimmer, the Tribunal had decided to all the appeal with 50 guineas costs.

LONDON SQUARES: PRESERVATION BILL

The text is issued of the Bill introduced i the House of Commons to prohibit the erect of buildings and structures on garden square the Administrative County of London. prohibits building operations except with sanction of the Minister of Health, and provi that, before giving such consent the Mini must afford an opportunity to the Lond County Council and the Council of the Met politan borough in which the garden squ is situated of considering whether they de to purchase the square in order that it may retained as an open space.

In the event of the Council or a Boro Council passing a resolution to the effect t they desire to acquire the square, the Mini will hold an inquiry into the matter, and a considering the result of such inquiry he wil empowered either to sanction the acquisi of the square under the provisions of the or to give the consent asked for by the ow to the placing of buildings or other struct thereon. For the purpose of the Act a gar square will be deemed to be any open sp not owned by a public authority to which ei the public generally or a limited section of public shall have had access for a term of y exceeding twenty-five, and which during period has not had any buildings erected up other than buildings required in connec with the use of the land as an open space.

OBITUARY

Sir Luke Fildes, R.A.

We regret to record the death of Sir L Fildes, R.A., on Sunday last, at his Lo house. Sir Luke, who was 83, held a high position in the world of art, and one of the last of the great painters of Victorian era. The work by which he best known, and is most likely to be rem bered, is "The Doctor," painted for the Sir Henry Tate, and now in the Tate Gal Deceased was elected R.A. in 1887 and kni in 1906, a year after he had exhibited portrait of Queen Alexandra. He was cr K.C.V.O. in 1918.

THE LONDON BUILDING ACTS AND THEIR APPLICATION.—VIII

By H. V. MILNES EMERSON, A.R.I.B.A.

r IV of the 1894 Act deals with the naming mbering of streets. Notice must be given Council before any name is given to a and the proposed name should bear, if e, some relation to the district. All shall be numbered as the Council may In numbering houses, the following re to be followed :—

Paul's Cathedral is recognised as a centre and the numbering of houses begin at l or entrance of the street nearest to that g, except where a street leads from a main ghfare to a less important street, and ne numbering must start from the main ghfare. Taking, therefore, the sides of t as left and right (assuming that the back rds St. Paul's), the odd numbers will be d to the left-hand side, and the even rs to the right-hand side.

V.—OPEN SPACES ABOUT BUILDINGS D HEIGHT OF BUILDINGS.

g of "Domestic Building" in this Part of Act.

on 39. For the purpose of this Part of t the expression "domestic building" ot include any buildings used or con- d or adapted to be used wholly or ally as offices or counting houses.

—This expression "domestic building" ed by Sect. 5 (26), light and ventilation table basements (Sect. 40). In the case estic buildings erected after the com- nent of this Act, which shall have a le basement, there shall, for the purpose ng light and air to such basement, be d in the rear of such building and vely belonging thereto an open space of regate extent of not less than 100 sq. ft. m any erection thereon, about the level adjoining pavement, which open space, standing anything hereinafter contained, t necessarily adjoin the rear boundary premises.

—The Public Health (London) Act, 1891, s for regulations to be observed "where derground room, which was not let or d separately as a dwelling before the of this Act, shall not be so let or occupied it possesses the following requisites." re given in sections 96, 97 and 98 of this

as to Habitable Rooms are given in 70 of the London Building Act, 1894. n 40 should be read in connection with 41. The latter section allows in certain the whole site to be built over to a height above the level of the pavement. Where a habitable basement, however, 100 sq. ght and air space must be provided in of the building in addition to any light space which is available to such habitable t in the front or sides.

00 ft. space at the rear need not neces- djoin the boundary wall, it can be a the building. The width can be less ft., provided the minimum of 100 sq. ft. tained, that sufficient light and air is l, and that any buildings within the 10 ft. o not project above the level of the pave-

Space at Rear of Buildings.

n 41. With respect to domestic buildings after the commencement of this Act and upon a street formed or laid out after mencement of this Act, the following ns shall have effect :—

ere shall be provided at the rear of every lding an open space exclusively belong- ich building, and of an aggregate extent ss than 150 ft.

there is a basement story directly iciently lighted and ventilated by the ce provided under the preceding section spective of any use to which the ground appropriated, or where there is no such basement story, but where the ground story is not constructed or adapted to be inhabited, the open space required by this section may be provided above the level of the ceiling of the ground story, or a level of 16 ft. exclusive of lantern lights measured from the level of the adjoining pavement.

In all other cases, the open space shall be free from any erection thereon above the level of the adjoining pavement, except a water-closet, earth-closet or privy, and a receptacle for ashes and enclosing walls, none of which erections shall exceed 9 ft. in height.

(ii) Such open space shall extend throughout the entire width of such building and to a depth in every part of at least 10 ft. from such building.

Note.—Section 40 deals with open space to habitable rooms in basements and subsections 1 and 2 of section 41 deals with open spaces at the rear of domestic buildings. Where the ground floor is used, say, for business purposes, the whole of the ground can be covered with a building not exceeding 16 ft. high above the adjoining pavement, with, of ocurse, adequate ventilation, &c., for the habitable basement (if any) as provided in section 40. Above the ground story building or above the ground level, as the case may be, a space of not less than 150 ft. super must be provided at the rear of the building with a minimum width of 10 ft. Thus to a building 15 ft. or more in width a depth of 10 ft. would meet the requirements, but to a building less than 15 ft. wide, the depth of the space at the back must be increased in order to obtain the minimum air space of 150 ft. super.

The next subsections deal with the height of buildings in relation to space at the rear.

(iii) The height of any such building in relation to the space required in the rear thereof shall be fixed and ascertained as follows :—

(*a*) An imaginary line (hereafter referred to as "the horizontal line") shall be drawn at right angles to the roadway formed or to be formed in front of the building and through or directly over a point in front of the centre of the face of the building ;

(*b*) The horizontal line shall be produced to intersect the boundary of the open space furthest from the said roadway ;

(*c*) The horizontal line shall be drawn throughout at the level of the pavement formed, or to be formed, in front of the centre of the building, unless the site of the building incline towards the roadway, in which case the horizontal line shall be drawn directly over the said point in front of the centre of the face of the building at the level throughout of the ground at the boundary of the space furthest from such roadway where such boundary is intersected by the horizontal line ;

(*d*) A second imaginary line (in this Part of this Act called the "diagonal line") shall be drawn in the direction of the building above and in the same vertical plane with the horizontal line and inclined thereto at an angle of sixty-three and a half degrees, and meeting the horizontal line where it intersects the boundary of the space furthest removed from such roadway ;

(*e*) No part of such building shall extend above the diagonal line, except chimneys, dormers, gables, turrets, or other architectural ornaments aggregating in all to not more than one-third of the width of the near elevation of such building, and except any building which, under the provisions of this section, is permitted on the open space.

The remainder of subsection (1) provides for the mean level of a pavement when same is not all on one level, and also for the mean distance to the rear boundary wall, where the latter is not parallel with the rear wall of the building. Provision is made for irregular shaped sites, corner sites, and sites with open public spaces, or streets abutting immediately upon the land at the rear.

Note.—The foregoing sub-section deals with open spaces at the rear of buildings abutting upon new streets

The height of 9 ft. for water-closet, privy and enclosing walls, &c., can be taken to mean the height from the ground adjoining and not from the pavement in front of main building as defined in sect. 5 (21).

The diagonal line of 63½ degs. intersects the horizontal line at the boundary of the open space at the rear, even if the whole of the ground is built upon to the height of 16 ft. above the pavement level.

(2) With respect to domestic buildings erected after the commencement of this Act abutting upon a street formed or laid out before the commencement of this Act, the provisions of this section shall apply with this modification, that the horizontal line shall be drawn throughout at a level of 16 ft. above the level of the adjoining pavement, and that in any case (except in the case of dwelling-houses to be inhabited or adapted to be inhabited by persons of the working class), the open space to be provided in accordance with paragraphs (i) and (ii) of sub-section 1 of this section may be provided above the level of the ceiling of the ground floor story or above a level of 16 ft. (exclusive of lantern lights) above the level of the adjoining pavement.

The next portion of this sub-section provides for the extension of any part of the building above the diagonal line, if the Council agree.

The final paragraph provides for the exemption from this section of houses abutting in the rear on the River Thames or on a public park or open public space, not less than 80 ft. in depth.

Note.—Subsection 2 deals with open spaces at the rear of buildings abutting upon old streets, and allows the horizontal line to be 16 ft. above the pavement level. No allowance is made for the rise (if any) of the ground from the pavement to the boundary at the rear.

SUB-DIVISION OF OLD HOUSES

In a letter to the *Times* upon this subject, Mr. Reginald H. Hellyer writes :—

"The conversion of a mansion of architectural and, possibly, historical interest, into well-equipped flats, should not present any great difficulty or entail much structural alteration, but, as each flat will obviously require its own private sanitary installation, it may be necessary to divide some of the rooms in order to provide bathroom and kitchen accommodation, and so forth. This can be compactly arranged upon modern lines, to occupy some small but convenient space. The bathroom could be laid out to include bath and wash-basin. The sanitary arrangements are preferably kept apart. The kitchen details should be grouped near an existing fireplace or opening, so that the flue could be used to carry away the fumes of the gas-cooker which would probably be installed, and the recess could be tiled. A sink of convenient size and shape could be fixed underneath a window for light, the best arrangement being a grooved, teak drainer upon either side, and the taps delivering over the sink from standards fixed at the back through a capping strip, a plate-rack being fixed upon either or both sides above the draining board. Careful selection will provide good fittings to meet the above requirements at moderate cost.

"The heating and domestic hot-water are assumed to be already provided in the mansion, merely requiring re-distribution or extension upon 'communal' lines. This arrangement has great advantages over an independent hot-water apparatus for each flat, not only upon the score of economy, but in the matter of labour-saving and concentration, avoiding the annoyance and trouble of individual boiler-cooking and regulation—in fact, in such a matter as that discussed above, there is no worthy alternative to the central control of heating and hot water supply."

SURFACE TREATMENT OF CONCRETE & CAST STONE

MR. H. A. HOLT continued the series of lectures at 9, Conduit-street, confined to workers in the building trades, when he read on Wednesday evening a paper on "Surface Treatment of Concrete and Cast Stone." Opening his address, the lecturer said that the subject of the artistic surface treatment of concrete was one which until fairly recently had been somewhat shelved. Architects had in the past relied almost solely upon the design of a concrete structure to produce a pleasing effect and were resigned to the fact that the material which they were using must necessarily be of a cold, monotonous grey appearance. Traditional construction consisted of a collection of units assembled according to the design of the architect, and the design was prepared with due regard to the supposed limitations of the material employed. But concrete construction involved an essential departure from the traditional and, by presenting new problems for consideration, exerted a corresponding influence upon design. There gradually developed a variety of processes for treating concrete, which might be classified as follows:—

Coloured cement washes; coloured cement used in concrete generally; renderings and stuccos, coloured or otherwise; exposed aggregate; and cast stone.

All these treatments were used nowadays to good effect, and each had its particular advantages for different classes of work. Of all the methods which had been evolved for treating a concrete surface none were so interesting or productive of such good results as the last two mentioned, and it was to cast stone and exposed aggregate work that the lecturer proposed to confine his remarks.

Perhaps the first man to realise the possibilities of concrete in the form of cast stone took a tip from Nature, for after all, what was Nature's method of building if not concreting? The formation of sedimentary rock, chalk and other materials of the earth's strata was due to a similar cementation slowly developed throughout the ages as that brought about more rapidly in the concrete of modern science. Cast stone could be described as reconstructed stone, and, as a matter of fact, this was a far more apt description of the nature of the material.

Cast stone was made by crushing natural stone or using the water-stone chips from quarries or stone yards and building it up again into definite shapes, but replacing Nature's binding materials with something which in many instances was infinitely stronger, namely, Portland cement. The surface of the cast stone was then dressed. Exposed or scrubbed aggregate work differed very slightly from cast stone in all but appearance. It was not a reconstruction of any known material but a true revelation of concrete.

The principle was, as was the case in cast stone, to remove from the surface of the concrete the film of cement which, if the concrete were properly made, invariably formed, and exposed the aggregate. One had to rely on the aggregate or combination of aggregates to give a pleasing and attractive appearance when exposed. Whereas in cast stone the size of the aggregate was limited by the character of the natural stone and the method of dressing, with exposed aggregate work there was no such limit, and the size of the aggregate was only governed by the requirements relating to the manufacture of sound, dense concrete. One of the most important factors to be taken into consideration in the manufacture of cast stone was the exact reproduction of the colour of the natural stone. In the majority of cases white Portland cement or a mixture of white and grey gave the best results.

For cast Portland stone no pigment was necessary, but for nearly every other stone it was essential that pigment be added to the cement; for although the natural stone aggregate would provide most of the colour, it was unavoidable that some of the cement should show, and this must be so coloured that when it was set and hard it should be indistinguishable from the aggregate. Opinion was very divided as to the best consistency to use in making pre-cast synthetic stone, and as there were several methods of moulding, the variation in water content was probably due to the fact that whilst one manufacturer found that his process called for a dry mix, another might find that a wet mix was more suited to his work. For important buildings, cast stone was sometimes made solid throughout; that was to say, the special aggregate and coloured cement extended throughout the whole section. By far the most common method was to use the special cast stone mixture of crushed stone and coloured cement for the face only, and ordinary ballast concrete for the backing. If, as was usually the case, the maximum size of the special aggregate was ¼ in., the facing need not be more than ½ in. to ¾ in.

Owing to certain difficulties, cast stone was, until fairly recently, used almost exclusively for pre-cast work, but the difficulties had been overcome and a satisfactory method had been found of constructing cast stone *in situ*. A really fine example of this work was to be seen near Dorking in the new Deepdene bridge over the River Mole. The treatment of the surface of cast stone was one of the most important stages in its manufacture. In the modern product, not only must the colour exactly resemble that of the natural stone of which it is made, but also the texture must be a faithful reproduction. Of all the methods of treating cast stone, none perhaps was more interesting or productive of better results than the tooled surface. Natural stone had been finished in this way for centuries, and it was a method which was quite familiar to both the architect and the mason. The tools used were just the ordinary mason's bolster and a wide chisel with serrated teeth. Another method, and one which was very widely used, was the rubbed surface. This was particularly suitable for high-grade work and where very sharp arrises and intricate moulding were required. In pre-cast work, when the cast stone was taken from the moulds it would frequently be found that there were small holes on the surface, due to the trapping of air. These and other irregularities should first of all be filled with an exactly similar mixture to that of which the facing was made. A cream was then made of very finely crushed stone and cement and floated over the whole surface. When this was dry it was brushed away, and the result at this stage was quite pleasing and the sand-face finish thus produced was preferred by many architects. But if the rubbed surface was required the concrete must be left until it was a little harder. The cement must be approximately of equal hardness to the aggregate, so that one was not rubbed away before the other. Carborundum was chiefly used for rubbing down, but York stone or red Mansfield stone were also suitable. Polishing was another treatment of cast stone, which was, of course, just a refinement of rubbing. The rubbing stone usually used for polishing was snakestone. It was a particularly suitable treatment for cast Hopton Wood stone and was used for interior as well as exterior work.

Beautiful effects could be obtained by scrubbing or washing the cement away from the surface of concrete, and this treatment was not confined to cast stone, but could be used on any type of concrete. In cast-stone work where a very porous crushed stone was to be used as the aggregate, and this aggregate exposed by tooling, etc., it was advisable to treat the surface when the cement was thoroughly set and hard with a solution of silicate of soda or fluosilicate to increase its impermeability and reduce the risk of damage by frost. The advantages of cast stone over natural stone were many, but one of the greatest was the uniformity with which it weathered. However carefully natural stone was selected, some blocks would weather very much more rapidly than others. To some people this might be a charm, but it migh an expensive charm. Again, one of the d backs to the use of natural stone was the that it must be laid on its natural bed was to last. Whilst this is done in very n cases where proper supervision was exer occasionally the stone was laid haphazard disastrous results. When one takes account the fact that the natural stone a gate was in many cases the waste ma from quarries, and that in the majorit cases in pre-cast work innumerable units cast from the same mould, it could be realised that the cost of a cast stone was only about 60 per cent. of the cost cut block in the natural stone.

That the life of some natural stones in buildings was limited was evidenced b trouble recently discovered in connection the defective condition of the stone wo the Houses of Parliament, and it was i repairs of old buildings that cast stone given a certain prominence. It was tained that the quarries from which original stone was drawn were disused, in order to effect the repairs to some o most beautiful buildings, cathedrals, et was found to be entirely satisfactory to down the stone which had to be replace reassemble it as cast stone. By the c addition of pigment and close attention given to the texture, an exact match wa tained, and when inspected by experts were unable to detect the reconstructed from the material of which the building originally been built.

THE WEEK IN PARLIAMENT

WESTMINSTER, *Wednes*

The Lighting of London Tenements.

DURING the debate on the second read the London County Council (General P Bill in the House of Commons, Sir W. Da the Unionist member for South Kensi called attention to clause 56, which con the proposal to make the owners of ter property in the county of London lia summary conviction and heavy penalty case of every staircase which, in the opi the local authority or any officer o authority, was not sufficiently lighted. Pe against this clause, he said, had been lod some twenty authorities which for many past had provided working-class dwelli London.

The Bill was, however, read a second t

Leasehold Reform.

Leave was granted to Major Owen, a member, to introduce a Bill to amend t governing the relations between landlo tenant. He said that the Bill propo give further power to the expert t already constituted under the Acquisi Land (Assessment of Compensation 1919, to determine all disputes betwee lords and tenants as to the terms of t It also proposed to repeal sub-section section 84 of the Law of Property Act and to re-enact it so as to extend the p vary covenants which had become eitl of date or unfair. It provided also for in the tenant the property in future b erected or improvements executed b He was to be compensated if the lease renewed, and if the lease was renewed improvements were not to be assessabl rent. The landlord's claim for dilap was to be restricted to the actual loss landlord, while, on the other hand, th would be able to set off against the cl dilapidations improvements carried him voluntarily. The Bill represen views of the Liberal Party in regard to l reform.

The Bill was read a first time.

Peers' War Memorial.

A Select Committee of the House has been appointed to make the n arrangement for the erection of the Pe

. The Committee consists of: The of Lansdowne, the Marquis of Lincoln- rl Beauchamp, Earl of Oxford and Earl Buxton, the Earl of Crawford, Peel, Lord Desborough, and Lord

St. Stephen's Hall Panels.

Brittain asked the Under-Secretary for the Home Department, as repre- ie First Commissioner of Works, what was being made in the paintings for panels to be placed in St. Stephen's

n Hacking said that all the paintings and, and it was hoped that they would eted during the coming summer.

Houses Built.

amberlain informed Mr. T. Thomson to February 1 the numbers of houses d been completed in England and Wales e assistance under the various Housing re 294,515 by local authorities, and by private enterprise. The numbers nstruction under the Housing Acts on 1 were 60,369 by local authorities, 94 by private enterprise.

Town-Planning Schemes.

amberlain informed Mr. T. Thomson urban authorities had prepared or are town-planning schemes, a number of tended to portions of other urban areas. ber of urban authorities with a popula- 10,000 or over in whose areas formal d not been taken in the preparation of nning schemes was 276.

Loans for Slum Clearances.

Chamberlain also informed Mr. T. n that prior to the financial year 1924–5, accounts were not furnished to the ent for expenditure under Parts I and II ousing Act, 1890, as distinct from Part at Act. The payments made on account equer subsidy for slum clearances for nwards were as follows :—

	London.	England and Wales.	Total.
..	£12,800	£2,592	£15,392
..	18,950	8,000	26,950
..	26,050	18,150	44,200

* Estimated.

Concrete Construction.

ntess Astor asked for the number of uilt of concrete construction, or of other nodes of construction, in local authority and by private enterprise under the Housing Acts,

amberlain said that statistics were not showing the total number of houses of and other special methods of construc- t since the War. Estimates based on obtained from local authorities in con- with State-assisted schemes under the Acts of 1923 and 1924 showed that con- d been made for 41,849 concrete houses 3 houses of other special methods of ion, of which 22,361 houses of concrete 7 of other special methods had been d under these Acts. Of the completed ,012 in concrete had been built by local es and 5,349 by private enterprise; the houses built by other special 2,600 had been completed by local es and 1,287 by private enterprise.

Rural Housing.

y to Mr. Hurd, Mr. Chamberlain said rban authorities and 35 rural authorities le applications to be declared local es for the purposes of the Housing Workers) Act, 1926.

Cottage Architecture.

ntess Astor asked in which districts committees had been, or were about to p, in order to advise on the recon- of cottage architecture under the (Rural Workers) Act, 1926.

amberlain said he regretted that he had information on the matter referred to.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—ED.

Demolishing Hollow Brick Walls.

[REPLY TO "H. E. B.," FEBRUARY 4.]

SIR,—In answer to your correspondent's inquiry, I have just had an opportunity of pulling down some hollow walls where the ordinary twisted galvanised ties were used, and which I personally saw used 25 years ago, and I am pleased to say they are as sound now as the day they were used. In this town (Worthing) we have found by experience that hollow walls are the best method of keeping the damp out. It would be useless to say that we never have any trouble with mortar dropping on to the wall ties, but the trouble, however, has been very slight indeed. We find by continually warning the foreman and the men that they gradually get into the way of clearing the wall ties so that trouble in this respect rarely occurs.

WELLER W. SANDELL.

SIR,—With reference to your correspondent's lament over the difficulty of keeping mortar droppings from collecting on wall-ties, I have designed two specially-shaped ties, either of which, I think, would practically overcome the trouble. If any firm of manufacturers of iron goods will enter into some kind of agreement safeguarding me against the purloining of the ideas whilst the questions of saleability and terms are being discussed, I shall be pleased to get into touch with them. Any communication should be sent to the Editor of *The Builder*.

REXOR.

Coke Breeze Lintol.

SIR,—Is it safe to put a lintol (reinforced) composed of coke breeze over an opening for a stove or "Devon" fireplace? I have seen breeze bricks burned as fuel, and it appears to me that the heat would cause a lintol to fire in time, or to crack and spawl away. I shall be glad to have your readers' opinion on this.

C.

Damp Course.

SIR,—What is the remedy for damp walls where the dampness is not due to leakage of roof, but seems to occur on changes in the weather? The house is some 200 years old or more. Can you explain what a damp course really is?

S. E.

Old Timber Beam Construction.

[REPLY TO MESSRS. S. WHITELOCK & CO., FEBRUARY 18.]

SIR,—I remember spending many hours as a student sketching and hearing lectures upon flitched beams, the strength of which was claimed to be in the reversing of the twin halves of a squared beam both laterally and longitudinally so as to make use of the stronger and weaker members of the tree to their best advantage. I wonder if there is any practical virtue in this practice, or whether all the cutting up and bolting together in the world will make as strong a unit as nature has provided in the first instance. It would be interesting to hear if there are any reliable data showing the comparative strength of timber at the heart and in the outer rings, and at the base and upper part of the tree, and whether the differences are sufficient to warrant the above practice. The recent letters on old beam construction have called the matter to mind.

VICTORIAN.

Profit on Cottage Work.

[REPLY TO "PRODUCTION AND PROFIT," FEBRUARY 18.]

SIR,—Apart from a minority of contractors, I think that all others, and also building owners and architects, would agree that the generally accepted fair rate of net profit allowable to a contractor, and which he is entitled to expect on any job which is expected to pay in itself, is 10 per cent., apart from overhead charges, &c. In many cases, as when it is desired to retain a building staff during slack periods, or to secure a desirable customer, it will be necessary to cut this profit considerably, but any greater profit will be an indication of something wrong with the industry, and a golden age which will prove all too short and followed by a reaction of depression from which it will be difficult to recover.

The overhead charges can hardly be assessed by other than the people who are running the business. In any case the question of high railway rates does not arise under this head because they are definite figures which can be included in the prime costing. Difficulty of obtaining material for cottage work is often a matter of credit. Merchants are often shy of the young firm and profess empty hands, which become miraculously bountiful when the wealthy contractor round the corner calls for supplies. The best cure for this state of affairs is prompt cash, no doubt a difficulty in many cases, but where an impossibility an indication of a premature opening of the business. It is, however, a fact that many a firm has secured the confidence of the merchant in a very short while by an early exhibition of ready cash.

Illness is a risk that should be taken, though it may bite into the net profit. To a lesser degree bad weather falls under the same head, and it will be found that the loss of time from this cause is far less than generally believed. In supervising a large contract during the wretched weather of the early months of last year, when it was in its carcasing stage, I was surprised to find from my records that the bricklayers lost only two half-days in 10 weeks. This was largely due to organising the work so as to keep back some that could be executed under cover in this particular job. When as many as possible of these contingencies have been eliminated it will probably be found that a further 2 per cent. or 3 per cent. will cover the overhead charges for estimating purposes. If a business is to be built up and expanded a limited risk must be taken.

ADVICE.

Concrete Made with Sand-Lime Bricks.

SIR,—I have just done a job in concrete made with rubble from sand-lime bricks, and have a large area of grano-paving to lay. Would it be safe to use the rubble of these bricks for concrete?

W.

Sawn Laths.

[REPLY TO "W. R. C.," FEBRUARY 11, AND "INTERESTED," FEBRUARY 25.]

SIR,—I think the cause governing the use of 3 ft. 6 in. and 4 ft. laths is not the size of the room, but the spacing of the floor to ceiling joists and partition uprights. For ceilings with timbers at 14 in. centres, 3 ft. 6 in. laths work without waste; at 15 in. centres, 2 ft. 6 in. laths give least waste, but a 3 ft. 9 in. lath would be better. As however 3 ft. 9 in. is not a trade size, some builders prefer 4 ft., which only wastes 3 in., and does not involve so many double rows of nails as 2 ft. 6 in. laths. On partitions with uprights at 2 ft. 6 in. centres, 4 ft. is the size demanded, and at 2 ft. 3 in. centres, 4 ft. 6 in.

X. R. E.

Broseley Tiles.

SIR,—We should be obliged if any of your readers could give us the correct sizes, &c., of angle (corner) and hip tiles, &c., for use with Broseley tiles, 10½ in. by 6½ in.

REDHILL TILE CO., LTD.

Dance Floor.

SIR,—Can any of your readers inform me of the best method of installing a dance floor of wood on a concrete floor, height being an important factor owing to the present concrete floor being at step height at present? Is maple the best wood for this class of floor? Any information would be much appreciated.

WEEKLY READER.

THE BUILDING TRADE

BY-LAWS RELATING TO BUILDINGS AND STREETS.—IX

Before passing to the very complex subject of the control by by-laws of streets, we must briefly note the observations of the Committee on Building By-laws on the question as to whether it should remain optional, as at present, for local authorities to make by-laws, or whether some form of compulsion should be exerted, so that by-laws in some form may be put in force in every district. In 1914, when the Committee commenced its inquiry, there were some 220 districts with no by-laws at all, and the evidence given before the Committee led them to the conclusion that the rural model code, at least, ought to be put in force in every district. The Committee observed that the building code should be kept as simple as possible, a process aided by the tripartite division into urban, intermediate and rural.

In the first place the Committee recommended that every district should have at least a minimum code of by-laws, and they did not consider that any appreciable number of local authorities would refuse to carry out a statutory direction that by-laws should be made, but it was suggested that in cases of default the Ministry should have power to declare by order that certain by-laws should come into force and take effect as if made by the local authority, there being precedent for this in section 44 of the Housing Act, 1909, a section now, as we have stated before, extended in its operation by section 101 of the Housing Act, 1925.

The second step to be considered was how the by-laws thus put in operation should be enforced, and here again the Committee were of opinion that the number of local authorities who would deliberately neglect to enforce the provisions which had been put in force by the Ministry would be even smaller than the number who would disobey the statutory direction to adopt by-laws for their districts, but to provide for such a contingency it was suggested that the Ministry's existing powers under the Public Health Acts might be strengthened by enabling the Ministry to appoint the County Council, on default of the local authority, to execute the by-laws, there being a precedent for this, as under those Acts the Ministry have power to nominate a person to act in place of a defaulting authority in other matters (see section 299, Public Health Act, 1875), and in London, under section 101 of the Public Health (London) Act, 1891, power is already given to the Ministry to appoint the County Council to enforce by-laws in default of the borough councils.

The Committee then had to consider what steps should be taken to secure that the by-laws are adequate and strengthened as required. The original by-laws in a district that had hitherto been without them would be, the Report states, in most cases the rural form, and the Committee considered that if their suggestion was adopted of giving equal statutory by-law-making powers to all authorities (the recommendation we referred to in our second article), graduation of the by-laws according to the character of the area, rural, intermediate and urban, would be easy to secure, judged by the state of the development of the districts but not their governmental designation as merely urban or rural.

The Report points out that there is no reason why a rural area which happens in law to be in an urban district should not have such a reduction in the standard of control as is represented by substituting a rural for an urban code of by-laws, and there is every reason why an urban area, though called a rural district, should have the urban or intermediate by-laws which it needs, and the same considerations apply to parts of districts, for, given an ascertained boundary, there is no reason why one part of a district should not have by-laws different from another, and the Committee expressed a wish that local authorities should realise that this can be done and that such a policy is encouraged by the Ministry. In a rural district, it was pointed out, the most obvious boundary is that of the contributory place, and it would probably be convenient for the sake of certainty to adopt this, even at the cost of including, for example, a truly rural portion of a contributory place in the ambit of urban or intermediate by-laws.

The Report then speaks of the possibly rapid development of districts, as, for instance, by a new coal pit being sunk, or a factory being set up in a purely rural area, and states that although there is no reason to doubt that the majority of district councils would take steps to meet this danger and adopt more comprehensive by-laws, yet it was just possible that rather than check industrial development in the district, they might connive at building of an improper or ill-considered character, or that the commercial development might be too rapid to be met by the present machinery of local government, and to meet these possibilities they suggested the following machinery:—

The recommendation to which we have referred above, that every district should be compellel to make by-laws, or in default, the Ministry should have power to do so, ensures that plans of all buildings to be erected will be brought before the local authority, and to this the following recommendations were added (see paragraph 113):—

(1) Every local authority should be required to keep a simple record of the plans submitted to them and to make returns at such intervals as the Ministry prescribe of the number of such plans and whether they are for dwellings or factories, etc.

(2) That a specific right should be given to the County Council, to the parish council, or parish meeting, of any parish in a rural district, and elsewhere to any four inhabitants, to represent to the Ministry that the district had reached, or was likely to reach in the near future, a stage of development in which more comprehensive by-laws were required. (The number of persons was taken from section 10 of the Housing Act, 1909.)

(3) That the Ministry should be empowered upon a representation as aforesaid, or upon examination of the periodical returns of plans, or on the Medical Officers' reports already furnished to them, or upon representations by their own Inspectors, to require the adoption by the local authority of such by-laws as will meet the case and, in default on the part of the local authority, to put such extra by-laws in force.

We may perhaps be pardoned in connection with the above proposals for referring to the suggestion we made in our fifth and sixth articles in connection with the recommendations of the Committee as to the methods by which obsolete by-laws could be brought up to date and kept up to date, and uniformity be secured, as it will be seen the two subjects are closely allied; and the Committee recognised this, for in connection with the above proposals they were at first sight attracted by a suggestion that a single standard should be adopted in all districts, subject to necessary local variations.

Our suggestion was that the model series should be put in force in the districts to which they are appropriate by statutory order, but only after opportunity had been given to any local authority to show cause for the insertion of provisions to meet local circumstances, and it will be seen we think that in the recommendations we have noticed in this the Committee were closely approachin suggestion, although it was not before They admit, for instance, that no appr number of authorities would refuse t out a statutory direction that by-laws be made, and if any local authority n to enforce the by-laws so made, the Com here provide the machinery by which laws can be put in force on their d Lastly, the Committee admit that the of seeing that the by-laws are strengthe development progresses is the converse process they were considering earlier Report, and to which our suggestion as to how by-laws can be brought up and too stringent by-laws can be repeal

We submit that our suggestion, if a might modify the recommendation tained in the part of the Repo have noticed above, and would perfo double task of bringing by-laws up and keeping them up to date that we to in our fifth and sixth articles, as the objects to be attained by the recommendations. By-laws up to date be put in force as we suggested in all d and as the appropriate models to the would be put in force subject to local ments, every area would have the appr by-laws and the cases in which local tion is required would prove quite the tion, and the system would work, we with far less friction than that outlined three suggestions we have set out abo do away with one element which we objectionable in the third recommen interference by private individuals. laws, according to the other recommen of the Committee, are only to exist for of years, the suggested period being te in nearly all cases, they would move w stages of development of the various d and the only case requiring special tre would be where a district has sudde veloped from some cause such as d above.

In the same section of the Report deals with the provision and enforcer by-laws, the Committee deals with class of case where the local autho made by-laws but neglects to enforc or some of them (see paragraph 114 Report points out that it is obviou duty of an administrative body to carry law, and this duty is even stronger where the body is one like a local a who has power to amend the law, if tice it is found to work badly, by pa amending by-law; but as the law stan is no power to compel a local auth perform its duty in enforcing its by-l the Ministry of Health cannot do section 299 of the Public Health A whilst a private person, under sect can only do so if he is "an aggrieved and this, according to the decided ca very difficult fact to prove. As reg powers of the Ministry in this direc passage in the Report (paragraph 11 very easy to follow, and we quote the law stands a local authority i practice compellable to enforce its if it chooses to ignore its du Local Government Board" (we have out these articles substituted the Mi Health for this) "have under sectio the Public Health Act, 1875, which g certain powers to require the enforc the Public Health Acts, no power t a local authority to do so, and a authority has therefore a free ha presume a mandamus would lie to council to do its duty in this respect enforce its by-laws] "as in any c there appears no direct authority fo a general proposition, and mandamu how, not a remedy which in pra ordinary ratepayer can use."

We gather that the doubt here

her a mandamus will lie under sec- to compel a local authority to enforce aws, for, of course, a statutory duty ne Acts can thus be enforced; but the is at any rate cumbrous and unsuited rivate complainant, and the Committee ended that the County Council, fol- section 100 of the Public Health) Act, 1891, or, further, any rate- r inhabitant of a district (a provision that Act) be empowered to take ngs for breach of a by-law if the y of the district, on demand formally them, refuse to do so; and that if eedings are successful, the person who nanded that proceedings should be nd on the refusal of the local authority en them himself, should get from the thority any costs not paid by the de- ; and that if he is unsuccessful he be recouped by the local authority, if nistry certify that the proceedings, unsuccessful, were reasonably taken. nust say we regard this recommenda- h the greatest disfavour so far as it this power on any private individual or semi-rural areas. There are local es and rivalries in every such district, h a wide power relating to the breach by-law might be very improperly used, would encourage a feeling of spying iciencies amongst neighbours. It is in the hands of private individuals only to be properly exercised by the thorities.

HE CINDERELLA OF INDUSTRY"

-I am particularly interested in the appearing in your last two issues, under ve heading, and feel that, in the interests d work, and reasonable prices from both of view, much good may arise from a ventilation of the subject of estimating. g the fantastical figures found in painting and turning to any list of tenders for any size, as published in your journal, stounded at the wide margin, especially d in the light of the following facts. average on any ordinary size and class act work, it is not unusual to find half ork is defined monetary p.c.'s. and pro- Of the other remainder of the contract f is, broadly speaking, material and half With a proper knowledge of the ringed sted prices of materials, their covering es, wastes, &c., there should not, with ced estimators, be a very wide margin, the difference of the tenders as a whole be *on* about one-quarter of the tender, builder's labour and profit, if any. In ords, the difference in tenders judged on ve, and applicable to the whole, should, entage, be multiplied by four, since it is approximately a quarter of the work re can be any room for difference of

regard to materials, one hears of a pre- very scientific body, called the Building Board, but with many years' experi- he trade, I have never culled any useful n this Board as to covering capacities, &c., of material. The keen experienced r will probably have constituted himself uch more useful one person Board of , and will probably have acquired and ese essentials in regard to materials. view is that the experienced estimator ng firm has nothing to lose in broad- ny information on this subject to even nest competitors (as opposed to the heory that all prices and data must be et), since it is the want of knowledge, knowledge itself, that is so disastrous dustry. One feels that anything that ne to uplift the industry to its rightful so that work can be taken at a reason- e and so give reasonable opportunities ting sound first-class work in return, in the right direction.

F. G. GAYER.

WORKMEN'S COMPENSATION STATISTICS FOR 1925

WORKMEN'S compensation represents one of the many forms of relief to the working classes which in the last 25 years have done much to improve their condition, but which are often lost sight of when questions of wages and standards of living are brought to the fore. Workmen's compensation does not affect the standard of living of the recipients, but it is non-contributory and forms a direct charge on industry and tends to relieve the workman from anxiety when he himself becomes incapacitated by injury or leaves dependants who would otherwise be left unprovided for at his death. It was a measure long called for, and although it has proved difficult in operation and has involved considerable litigation in the 30 years it has been in force, no one would now be found to say it was not a beneficent measure.

Perfect statistics can only be given as regards the seven great industries which make returns: Shipping, Factories, Docks, Mines, Quarries, Constructional Work and Railways, but taking the last decade, 1914–1925 (the statistics were interrupted by the war) it will be seen that in those industries the amount paid in compensation has nearly doubled; in 1914 it was £3,465,361, and in 1925, £6,642,930, and this represents the sums actually paid in compensation, for the Report now issued estimates the latter sum if all expenses and charges are added as some £9,000,000.

It is, however, interesting to note that the actual sums paid in compensation, exclusive of charges and expenses form the following charges on industries in the year 1925. In the Mining Industry 3·1d. per ton of coal raised, or 5·4d. per £ in wages, these figures comparing with 3d. and 4·9d. in 1924. In Railways the charge amounts to just under 1d. per £ of wages and in Shipping it represents 3·4d. per ton of shipping. These charges on industry should be noted, for the idea is too prevalent that benefits received without contribution come spontaneously, involving a charge upon no one.

In considering the statistics now published, if comparison is attempted in the figures with those for previous years, several points have to be borne in mind. In the first place, since 1921 statistics for Ireland have not been included, and it is impossible to separate the figures relating to Ireland in the Reports previous to 1922, but the Report states that it is not considered that the omission of the Irish figures will affect the tables to any serious extent. Secondly, it has to be remembered that the Act of 1923, which came into force on January 1, 1924, increased the compensation payable in fatal cases, whilst in non-fatal cases the Report states that compensation payable under the Act of 1923 was less than that payable under the Act of 1906 plus war additions. Under the Act of 1923 the amounts paid in respect of children's allowances alone amounted to £242,006.

Turning now to the seven great industries, it is interesting to note that the number of persons coming within the Acts at all, apart from claims for compensation, has remained wonderfully steady. In 1914 they numbered 7,057,111, in the two years after the war, 1919 and 1920, they were about 8,350,000, falling to 7,315,866 in 1921, and in 1925 they were 7,541,014. In 1914 the total sums paid in compensation were £3,465,361; in 1919, 4,616,723; in 1920, £5,978,009; in 1921, £5,509,395; and in 1925, £6,642,930. These sums were paid in 1914 in respect of 442,116 cases; in 1919, 368,469 cases; in 1920, 385,517 cases; 1921, 285,746 cases, and in 1925, 476,085 cases. These figures show the increase that has taken place in the amounts of compensation payable. In 1914 the average payment in case of death was £161; in 1925 the average was £285. In 1914 the average payment in case of disablement, including cases settled by payment of a lump sum, was £6 7s.; in 1925 it was £12 4s. In 1914 the average amount paid in lump sums was £28 4s.; in 1925 it was £82 10s. In 1914 the average amount paid in weekly payments (including weekly payments made before a settlement for a lump sum) was £4 14s.; in 1925 it was £8 19s.

The numbers of cases that occur do not appear to support any allegation of increased carelessness on the part of employers. For the purposes of comparison we do not give the year 1914, as in that year the number of fatal cases was abnormal owing to a large colliery explosion, but taking the year 1913 instead, the number of fatal cases was 3,748; in 1919, 3,293; in 1920, 3,531; in 1921, 2,385; and in 1925, 3,030. The non-fatal cases over the same period also follow much the same lines. In 1913 they were 476,920, the highest year after that was 1924 with 487,442 cases, and in 1925 there were 473,055. The ratio of fatal cases to the number of persons employed has, however, risen from .3 in 1921 to .4 in 1925 per 1,000 persons employed. As regards the non-fatal cases, it must be remembered that the alteration in the length of the "waiting period" affects the number of claims. In 34.98 per cent. of the cases, incapacity lasted less than two weeks; in 19.94 per cent. less than three weeks; in 8.91 per cent., three weeks but less than four weeks; in 30.99 per cent., four weeks but less than 13 weeks; in 3.50 per cent., 13 weeks but less than 26 weeks; and in but 1.68 per cent. over 26 weeks. These figures do not include cases settled by lump sum payments; but only 19,384 out of the 473,055 cases were thus settled.

As regards industrial diseases, the Report points out the serious increase in miners' nystagmus. In 1914 there were 3,218 old cases and 2,775 new cases; but the figures for 1925 are 7,890 old cases and 3,445 new. Dermatitis is also increasing. Comparative tables are not given as regards other industrial diseases.

Apart from special statistics relating to the seven great industries, the total number of applications for arbitration in the year was 5,846; but the total number of cases which proceeded to a decision in the Courts was 2,983, and the Report states there has been a great decrease in this kind of litigation since the beginning of the war, the applications for arbitration in recent years being less than 70 per cent. of the pre-war-figures. The cases carried to the Court of Appeal numbered 95.

This decrease in litigation is rather remarkable, considering the very complicated wording of the Act of 1923, especially in connection with the calculation of compensation and such sections as that relating to the stoppage or decrease of weekly payments, drafting that has been the subject of censure both in the Court of Appeal and the House of Lords in those cases which have come before them. In the year under review, there were only three appeals to the House of Lords. The number of cases brought under the Employers' Liability Act, 1880, were only 41, and there were no appeals. The Report shows the important part now taken by Medical Referees, of whom there are 208 in England and Wales and 80 in Scotland. The Act of 1923 added to the duties they are called upon to perform. In the building trade, there were 399 applications for arbitration, and 1,996 Memoranda recorded in England and Wales. The above is only a very imperfect summary of some of the information contained in the Report. The law is now more clearly grouped in sections in the consolidating Act of 1925, whilst the actual text of the sections has wisely been retained, and this may lead to even less litigation in the future, especially when the amendments introduced by the Act of 1923, and now comprised in the Act of 1925, have been the subject of judicial decisions where difficulties are experienced.

Institution of Quarry Managers.

The annual Conference of the Institution of Quarry Managers is to be held this year at Harrogate from June 27 to July 2, inclusive. An exhibition of quarrying machinery, plant, &c., is to be held in conjunction with the conference. An innovation this year is that instead of having a few lengthy papers read at the conference, a number of lecturettes are to be given, the time allowed for each lecturette being eight minutes.

EXETER BUILDING TRADES' EMPLOYERS

THE annual dinner of the Exeter Federation of Building Trades' Employers was held at Deller's Café, Exeter, on Tuesday, February 22, the President, Mr. F. M. Sleeman, being supported by the leading builders in the city.

Submitting "The National and South-Western Federation of Building Trades' Employers," the President said he had formed the opinion that the Federation was of great benefit to the industry, which, by the way, was the second largest in the country. He said he would like to contradict the impression that had got abroad that the Builders' Federation existed for a purpose unlike that of almost any other Federation. They did not live to rob the public, but to benefit them as much as possible. The speaker said the building trade was in a better state than a year ago, and was not under the cloud of expecting a lockout for a considerable time. Wages and conditions had been settled until 1928, and that was a boon to the industry generally.

Replying to the toast, Mr. A. N. Coles, of Plymouth, President of the South-Western Federation, said he believed every member of the South-Western Federation, from Gloucester to Plymouth, was true to its principles. Their task was to try to get people outside the Federation to see eye to eye with them, and take their share of the burden which the Federation had to bear. Big battles could not be fought without unity and strength.

Mr. W. H. Orrom, organising secretary of the South-Western Federation, proposed "The President and the Local Association." He said there was no association more loyal to the South-Western and the National Federation than Exeter. In Exeter prospects of work were rather good. He understood tenders to the extent of about £300,000 or £400,000 would shortly be settled, and he hoped that members of the Association would be successful.

In responding, the President said the Federation stood for fair play, and first of all fair play to their employees. Peace in industry was the slogan of the moment, and it could only be brought about on the lines of hard work. If this country was to regain its prosperity it would have to be by hard work.

NORTHERN BUILDING TRADES' FOREMEN

THE second annual dinner of the Wear and District Branch of the Northern Counties Association of Building Trades' Foremen was held in the Grand Hotel, Sunderland, on February 17, Mr. F. Batty, the Chairman of the Branch, presiding. The loyal toast having been drunk, Mr. Pitt proposed "The Foremen's Association," and in doing so said that no one could have imagined two and a-half years ago there would be such a gathering as that. It was just that period since the Association was first mooted, and now they were in a good position.

Mr. F. Batty, replying, remarked that the branch was going on very satisfactorily, and increasing numerically and financially. Attention had also been given to the social side with very satisfactory results.

Mr. Crombie suggested the introduction of educational lectures on their trade. These, he believed, would be of great advantage to the younger members. Toasts followed to the General Secretary (Mr. S. Elliott) and the Chairman. Mr. Batty's reponse brought a very pleasant gathering to a close.

BRISTOL CLERKS O WORKS

THE Bristol Association of Clerks of Wo Builders' Foremen's annual dinner was h the Royal Hotel, Bristol, under the pres of Mr. R. Ashley Hall. The company in Mr. W. H. Townsend (President of the A tion), Mr. C. K. Cowlin (President, Builders' Association), and Mr. C. F. W. (President of the Bristol Society of Arch

Mr. C. F. W. Dening, responding to th of "Architects, Engineers and Surveyors, there was a touch of genius in having cl works and builders' foremen in one fold: a step in the right direction. Co-ordinati a better spirit were wanted in everything should be less talk about the dignity of and more of the pleasure of work.

Responding to the toast of "The Bui Mr. C. K. Cowlin referred to a superann scheme. The builders hoped the clerks of would have been able to formulate one. would have been pleased to have helped, hoped the idea had not been droppe believed the general strike had cleared t and that now a better feeling existed b employers and operatives. The difficulti had to surmount were economic, and no questions. The future of their in depended upon the apprentices; they ha of fine young fellows coming along and he the foremen to do all they could to help them a good training.

The chairman submitted the toast of Bristol Association of Clerks of Work Builders' Foremen." The Association, h took an interest in its members from a fi point of view, and in addition tried to h own trade. The President, in response, re to the goodwill existing between the cl works, the foremen and the builders.

"NEW DEVELOPMENTS BUILDING METHODS

[A correspondent, signing himself "B Accountant, London," sends us the fol letter, but does not give his name and ad

SIR,—Professor Reilly's lecture o subject, as reported in *The Builder*, o ruary 11, whilst it affords an interestin parison between American and British m of construction, does not appear to put f any new ideas which could be adop advantage in this country. After apol for the lack of detail the architect pu his drawings, the Professor begins his of reconstruction by the elimination quantity surveyor, but in so doing he a huge architectural staff which would to be a more cumbersome and a far mor organisation.

His next move is to turn the contract an agent, whose chief function (apart certain amount of supervision) seems to drawing of commission on work done sub-contractors. The practical applica this theory must, of necessity, greatly the already heavy administrative running a job, and it is difficult to see can commercially justify such an appoi He then sub-lets the whole of the actua ing operations to sub-contractors, who, must supply their staffs of supervisors, of conference, &c., to co-operate w building agent, or manager—the ne being a job organised to death.

It is claimed that the adoption methods will greatly facilitate the s which a building can be erected, but good general foreman and a live build veyor could do all that is required (i working to a progress chart) with just factory results. It seems significant Professor throughout the whole of his practically ignores the question of fina one can only assume from the facts t that the suggested improvements wo to be adopted regardless of cost.

NEW BUILDINGS IN LONDON

Becontree.—SCHOOL.—The Essex County Council are purchasing a site at Becontree for the erection of an elementary school The site is in Becontree-avenue.

Becontree. — SYNAGOGUE. — The London County Council are proposing to lease to Mr. F. Smith, on behalf of the local Hebrew Congregation, a site in Becontree-avenue for the building of a synagogue.

Bethnal Green.—DWELLINGS.—On the Collingwood estate, Bethnal Green, the London County Council are to construct dwellings to the plans prepared by the Architect's Department.

Chingford.—CHURCH.—The foundation stones have been laid for the new Wesleyan Church. The building is to be faced with Lawrence's multi-coloured bricks with stone dressings, hand-made tile roof and oak joinery. The accommodation is for about 500, and the contract amounts to £7,410, and is being executed by Messrs. C. Foster & Sons, of Loughton. The architects are Messrs. George Baines & Son, FF.R.I.B.A., of 121, Victoria-street, S.W.1.

Eaton-place.— BUILDING.— The Hungarian Government has assigned a sum of £11,600 for the purchase of 35, Eaton-place, S.W., for a new Hungarian Legation.

Eltham.—SCHOOL.—Plans are to be prepared for a new school of over 1,000 children on the Well Hall estate. The cost of this school is estimated at £40,833, and the plans have been prepared by the Superintending Architect to the London County Council for whom the school is to be erected.

Foot's Cray-road.—PAVILION.—A new sports pavilion is now being erected in Foot's Cray-road, Eltham, by Messrs. W. H. Gaze & Sons, Ltd., of Kingston-on-Thames. The plans for the scheme have been designed by Messrs. Joseph, architects, 2, Paul's Bakehouse-court, E.C.4.

Grove Park.—SCHOOL.—The London County Council are about to purchase another site on the Grove Park housing estate, Lewisham, for the erection of an elementary school.

Hendon.—SCHOOL.—The Hendon Urban District Council are to build two elementary schools on sites just obtained. Both sites are on the London County Council Watling estate; one is in Gaskarth-road and the other is in Thirleby-road.

Old Kent-road.—CINEMA.—A super-cinema, with accommodation for 3,500 persons, is to be built in Old Kent-road, S.E. The cinema is estimated to cost £70,000 and is being erected for Mr. G. Smart, of the Tolmer Cinema, Hampstead-road, N.W. Messrs. Lovegrove & Papworth, 374, Old-street, E.C.2, are the architects.

Plumstead.—HOUSES.—The Royal Arsenal Co-operative Society, Ltd., have submitted plans to the local Council for the erection of 48 houses in Blithdale-road, Plumstead. Mr. S. W. Ackroyd, architect to the Society, has prepared the plans.

Poplar.—REBUILDING.—A sum of £30,000 is to be spent on the rebuilding of the London County Council school in Upper North-street, Poplar, E. Plans are by the Council's Architect's Department.

Upper-street.—ALTERATIONS.—Messrs. Nox, Ltd., 44, Praed-street, Paddington, are carrying out alterations and additions to 159 to 168, Upper-street, Islington, N.1, for the London Co-operative Society. Messrs. North, Robin & Wilsdon, 35–39, Maddox-street, W.1, are the architects. The contract price for the work is £19,977. The quantities have been prepared by Mr. H. A. Mackmin, 10, Vigo-street, W.1.

Wapping.—PREMISES.—Messrs. Wm. Shurmur & Sons are building the "Turk's Head" public-house in Tench-street, Wapping, for Messrs. Taylor, Walker & Co. Messrs. Young & Co., of 6, Queen Anne's Gate, Westminster, are supplying the constructional steelwork.

acknowledge with thanks the receipt of ars or diaries from the following:—Mr. K. Burt, C. Isler & Co., and W. G. ont & Sons.

Southend Improvements.

understood that a scheme to improve nd's pier is to be submitted to the . The proposals are said to provide for and larger pavilion which will replace the r sunk garden and model boating pool.

Salford Extensions.

yndicate of financiers are said to be ting with Salford City Council for the se of the ten acres site of Salford cattle . It is proposed to erect buildings to the f £1,000,000, including an exhibition hall, possibly a cinema, and an underground

Birmingham Electric Contract.

,458,000 tender of International Combus- td., has been accepted by the Birmingham city Committee. for the whole of the work d in the construction of the first section new Hams Hall Super Power Station, one new capital power stations under the ment's Electricity scheme.

British Legion: Annual Report.

the Annual Report and accounts for the British Legion, we see that both formation of new branches and the of members there has been a consider- ivance over past years. There are now branches in active being in the British The true value of the Legion may be judged by this excerpt from H.R.H. rince of Wales' speech at the Fifth Conference at Whitsuntide:—"It is y by sheer weight of numbers, though we are going ahead—figures by them- are not a sure test of the progress of anisation such as ours; it is by its good in the community and by its general e throughout the world that its de- ent must be judged. I think you will with me that in this respect also we can say that the British Legion has made ntial progress. It stands to-day as one greatest organisations for doing good."

THE SCOTTISH BUILDER

NEW BUILDINGS IN SCOTLAND

Aberdeen.—HOUSES.—The Town Council has passed plans for the erection of 70 houses.

Ayr.—HOUSES.—The Town Council has agreed to take steps for the compulsory acquirement of about 32 acres of land at Lochside, for the purpose of a housing scheme. It was further agreed that, subject to the approval of the Board of Health, 300 flatted houses be erected on the site. In addition, it was decided to erect at the same site 52 houses to replace houses demolished under a slum clearance scheme.

Clydebank.—HOUSES.—The Town Council has received the consent of the Scottish Board of Health to borrow £180,418 for the purchase of land at Whitecrook and the erection of 220 houses, and for the purchase of land at West Kilbowie and the erection of 170 houses.

Edinburgh.—HOUSE.—A further gift to Edinburgh University of £15,000 has been offered by Mr. Thomas Cowan, of Leith, and it has been decided to establish a residential house for male students, which will be established in George-square.

Edinburgh.—VARIOUS.—Dean of Guild Court has passed the following plans: Footbridge over the Water of Leith in Colinton Dell, for the Town Council; Messrs. Topping & Co., four flatted villas and four garages at Campbell-avenue; Mr. P. Macdonald, six bungalows at Trannair Park, Corstorphine.

Edinburgh.—HOSPITAL.—A public meeting to form a central hospital for the treatment of crippled children in the south-eastern area of Scotland has been held, and it has been decided that a new central orthopædic hospital be established on the outskirts of Edinburgh. A minimum of 75 beds will be required, and the estimated cost is £75,000, of which £10,000 will be for the site, and £15,000 for equipment and other extras.

Glasgow.—HOUSING.—The Corporation Housing Committee have agreed to receive a deputation from the Cardonald Housing Corporation, Ltd., in support of an offer by the firm to erect 1,000 or more Weir steel houses.

Hamilton.—SLUM CLEARANCE.—The Town Council has submitted plans, which have been passed by the Dean of Guild Court, for a slum-clearance scheme. The new scheme provides for the erection of eight houses of three apartments and 36 houses of two apartments.

Oban.—PIER.—The Town Council have concluded contracts for a structure to be erected on the North Pier. Plans for the new building have been prepared by the Burgh Surveyor (Mr. David Galloway). The building will be one story in height, with a large general cargo store, four smaller stores, two waiting-rooms, and piermaster's office.

Incorporation of Architects.

The monthly meeting of the Council of the Incorporation of Architects in Scotland was held at 15, Rutland-square, Edinburgh, Mr. G. P. K. Young, F.R.I.B.A., the President, in the chair. A report was submitted as to what had been done in the proposed formation of a council for the preservation of rural Scotland. There were elected one fellow, five associates, and two students. It was decided to formulate standard rules and regulations for the Chapters. Four representatives were nominated for the R.I.B.A. Council for the ensuing year.

Antonine Wall Discoveries.

Excavation work is proceeding, it is understood, upon the Roman fort at Mumrills, near Falkirk. The latest discovery is a fine series of baths adjoining the commandant's house, at once more complete and more spacious than anything of the kind hitherto known in Scotland. Altogether, enough has been discovered to show that the fort of Mumrills is the largest and presumably the most important of the defences known to exist on the line of the Antonine Wall built about A.D. 142 to re-establish the frontier of Hadrian's day between the Forth and the Clyde.

BUILDING TRADE WAGES IN SCOTLAND.*

THE following are the present rates of wages in the building trade in the principal towns of Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur:—

Advan- med for "Tangent" that they are simple to l, operate or erect, that an be effected without ity for revolving the or, and that, as all e inside the building, mpervious to weather Garage fitting is only er, of the many uses of of sliding door gear. ls and applications of are laid forth in the ecial Architects' Edition No. 26, sent upon

Heat Transmission and Insulation.

We have received from the Celotex Company of Great Britain, Ltd., 323–5, Australia House, W.C.2, a copy of their very useful booklet on heat transmission and insulation, in which are given the tentative coefficients of transmission of walls, roofs, ceilings, and floors, uninsulated and insulated, with various thicknesses of "Celotex." The coefficients of transmission in this folder are based on the most reliable and authentic test data available at the present time, and are expressed in B.T.U. per hour per square foot per degree Fahrenheit temperature difference. This most useful booklet will gladly be forwarded upon application to the company.

Improved Wood Pavement.

The fifty-fifth ordinary general meeting of the Improved Wood Pavement Company, Ltd., was held at Blackfriars House, E.C., Mr. William T. Graves (Managing Director and Chairman) presiding. In moving the adoption of the report and accounts and the payment of a dividend of 25 per cent., less tax, the chairman said that creosoted wood paving was as popular as ever, and, in the opinion of many municipal engineers, there was a great future for it. For examples of wood paving under severe test the chairman instanced London Bridge and Blackfriars Bridge, both of which carried heavy traffic. The Borough High-street, Southwark (8,200 square yards), which was laid in 1916 and which carried 356 tons per yard width per hour, had cost only £20 in repairs in ten years.

Woodworking Machinery

Messrs. J. Sagar & Co., Ltd., manufacturers of woodworking machinery, of Canal Works, Halifax, England, are showing an exhibit at the B.I.F., Birmingham, consisting of a representative selection of modern woodworking machinery, especially suitable for builders, contractors, and others who require the costs of woodworking operations to be reduced to a minimum.

Extension Ladders and Scaffolding.

Messrs. Stephens & Carter, Ltd., of Paddington Green, W.2, have recently opened their new factory at Harrow-road, Willesden, where they have also instituted for the convenience of their customers in the North-West districts a branch office, where all types of their well-known ladders, barrows, steps, trestles, &c., may be purchased. Messrs. Stephens & Carter, Ltd. also make a speciality of lending goods on hire

The John Benn Hostel.

The premises of the John Benn Hostel and Milner Hall, which were opened by the Prince of Wales recently, consisted originally of a large building off the Commercial-road, built in 1887 as part of the Barnardo Homes. This housed the workshops, swimming bath, chapel, &c., but with the removal of the homes to the country it fell into disuse. It has been adapted and remodelled to suit the Milner Hall, which is designed to form a social centre for recreation and education, equipped with a public hall, gymnasium and numerous other rooms, all planned for joint use when required by the occupants of the John Benn Hostel. The principal sub-contractors were:—Central and bath heating and domestic hot-water supply, Parker, Winder & Achurch, Ltd., Birmingham; artificial stone staircases, Malcolm MacLeod & Co., Ltd., Glen-road, Walthamstow; electrical installation Electrical Power Installation Co., Windsor House, Victoria-street, S.W.1; kitchen equipment, McDowell, Stevens & Co., Ltd., Upper Thames-street, E.C.; sanitary fittings, &c., Smithson, Coote & Co., Ltd., Philip-lane, Tottenham; composition flooring, British Magnesite Co., Ltd., 59, New Oxford-street, W.C.1; signs and lettering, Nash & Hull, Ltd., 87, New Oxford-street, W.C.1. The contractors were H. H. Hollingsworth & Son, of Battens Yard, High-street, Peckham, S.E., and the architects Messrs. Culpin & Bowers.

The London Ice Club.

We are informed that Messrs. E. P. Allan & Co., Ltd., of 107–109, Gray's Inn-road, are the sole agents in London and the South of England for Messrs. Wright Motors, Ltd., of Halifax, who supplied the whole of the electric motors for driving the ice-making and ventilation plant used in the London Ice Club, illustrated in our issue of February 18.

"Tangent" Garage Sliding Door Gear.

NEW COMPANIES

THE BUILDER

JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

XXXII.—No. 4388. MARCH 11, 1927

THE BELIEF IN REGISTRATION

CORDING to Mr. Guedalla, "There is a certain state of mind—unless perhaps it is a state of health—which prefers its hopes forlorn." Hence it is a commonplace amongst many architects that should the Registration Bill fail to secure the sanction of Parliament ne will lie with architects themselves. In the main, we ned to agree. The attitude is not a new one; it is—as it—an attitude towards what may be called a social ment which, like many others, comes before we are ready ot it. For we all have our little panaceas, our little our little dogmas, and for each of them we desire a tenderness of handling. Nevertheless, it is at least ble to say that the attitude of the architectural profes- ards Registration has changed considerably during the nty years. Or, to put it otherwise, the need for Regis- has appeared to be more obvious to the majority of ts.

have never been disposed to stifle discussion on this even if we have felt sometimes that many of the points should have been openly discussed at a round table ice. There is a danger that the end may be submerged eans. Naturally, we presuppose that the end is worthy: not, no great harm is done by a correspondence con- at long range. From our point of view, we believe that on on the part of the public to the Bill would result in sponding strengthening of the attitude of the architec- dy. After all, it is the welfare of the community which be the first consideration in matters deserving of legisla- t is the obvious weakness in almost all discussions upon gistration Bill that the narrow outlook has been preferred road outlook. An objection from the public, we main- uld be a healthy corrective and stimulant.

re discussing the matter as it affects the public or the t, we would like to refer to a general principle which must apply to every legalised professional body. It n stated that the proposed Registration Act does not go ugh; but we bear in mind that it is not compulsory to the services of a solicitor, a doctor, or a dentist. The of the private individual still exists collateral with the at certain professions are granted legal rights to titles ng their particular activities. If architects succeed in ng similar privileges they will have as much as is necessary present social state. The solution might safely be left ublic. When A is an architect and B is another kind of t, it may be much more important to define and distin- etween the two kinds than to enter into any argument which is the superior; but we imagine that definition tinction once clearly established the good judgment of d will have no difficulty in making its choice.

e is a widespread feeling, we find, that the opponents of ation are inclined to ignore the position and prospects ounger members of the profession. It must be admitted o often has the matter been discussed from the point of the Olympians, who can afford to adopt an exclusive . It is the ultimate achievement of the successful artist can either be entirely indifferent to public opinion, or end it to his way of thinking. Even so, it is difficult to the Olympian has anything to lose by strengthening the of those who toil on the lower slopes. To the archi- student, it is always next year; "always jam ow," as Alice said, "but never jam to-day."

doubtful whether support could be found for a Parlia- Bill which had for its sole object the welfare of a pro- l body. But surely nobody at this time of day does is limited view of the Bill. Twenty years ago the of that entertaining book, "Architecture: A Profession or an Art?" never got beyond the idea that examination can be no true test of an art. Architecture was an Art. Consequently, if examinations were no protection to the public against incompetent architects, the real artist must refuse a compulsory examination and repudiate the inference that he was inferior. Architecture was simply the art of building well and beautifully. A hundred years ago, it was argued, the public had a latent capacity for good architecture, and it was natural and inevitable that everyone should build well and beautifully without architects. The real argument, we suspect, running through some thoroughly skilful and attractive writing was in the attempt to prove that an artist could have a square head on his shoulders, whereas a practical man might be that and nothing else.

While we unhesitatingly believe that the æsthetic conception of architecture was genuine, we still fail to see that the ideals of the artist were jeopardised by accepting, along with others, a recognised status. A was still one kind of artist; B was another. Further, if the additional qualifications necessary for the ideal architect were regarded as matters within the scope of an average intelligence, the architectural world never could have lost an artistic genius. There were—as we see it now—two serious flaws. There was a failure to acknowledge a possible change in the condition of social life, and an inability to realise by implication all and every kind of artist. The most thoughtless of speculative builders was—by tradition at least—a true artist, and the equal of those who thought about art. In many respects his qualifications were even greater; he was without his peer in the æsthetic architectural democracy. The effect we see to-day. The public is at its wits' end to avoid the spoliation of the countryside, and already the air is thick with clamours for guidance and even protection. The dread disease of ugliness in building is out of hand. The small initial charges of thousands of architects will now be sunk in enormous funds to buy up territories carefully preserved from the invaders. The native art of building well and beautifully, which our artists relied upon, is to-day a lost art. John Drinkwater did not sing this eulogy of the modern home:—

> I see the barns and comely manors planned
> By men who somehow moved in comely thought . . .
> I see the little cottages that keep
> Their beauty still where since Plantagenet
> Have come the shepherds happily to sleep. . . .

Surely it is understood by now that ugliness in building is a symptom and a consequence of social disorder, while the disorder itself is something at once more fundamental and more incorrigible than is realised by those who seek to alleviate pain by means of an opiate. Possibly, an easily assimilated art is necessary in the present social state; but that is no excuse for bad art. It is not contended that the architect's claim to be known as an architect will make a speedy end of ugliness. Nevertheless, is it the first move in the right direction? We incline to think that the public is ready to admit it. Compared with the doctor's claim—which is not to keep us in good health—the architect has a strong case. It is true that the necessity for the services of the architect has only been demonstrated through the sickness of the body politic; but this has always been the prelude to every social reform. We cannot compel the public to seek the obvious remedy for the disease of ugliness; we can distinguish for the public the difference between the architect and the quack.

The common remark of those whose business or pleasure takes them by motor through the country is that the majority of buildings "should never be allowed." Precisely what is meant we can never quite ascertain, but at least the observation is an indictment of our social system. It is surely a rational thing to make a beginning by distinguishing between those who at least attempt to preserve the amenities and those who destroy them. We grant that the offenders are not all on the one side, but the ultimate end of registration for architects may be that the offenders will be the exception not the rule.

NOTES

Registration. In our leading article this week we discuss the question of Registration for Architects. It will be admitted, we suppose, that the Institute was bound to introduce their Bill in response to the widespread desire of the majority of the profession for Registration, and, in fact, the few criticisms that have been made are not directed so much to the principle of Registration as to points of what may be called detail. We find some difficulty in appreciating the opinion that the art of architecture is likely to suffer if those who practise are properly trained and earn the legal title to say so. It appears to us that both architecture and the community should gain when the distinction can be made between the qualified and the unqualified practitioner. We admit that not all professional men are competent, but there is all the difference between maintaining a standard and affirming that there is no standard to maintain. We also realise that a real artist may be caught in the mesh of an examination which may not be a real test of his qualities as an artist; but, on the other hand, is there not something rather one-sided in the attitude which maintains its freedom regardless of what freedom means? What we are concerned with to-day is the overwhelming proof that all those who call themselves architects are not good architects.

Youth and Registration. On the subject of Registration a correspondent writes to us submitting the claims of youth. He recommends that "our elders" should re-read Sir J. M. Barrie's famous Rectorial Address delivered at St. Andrew's University. "There," says our correspondent, "you will learn that our elders do all the talking and settling of the future prospects of youth. They are always seeking cushions for their old bones, rather than attempting to build up a fairer future. 'It is a solemn thought,' as Sir J. M. Barrie says, 'that almost no one—if he is truly eminent—knows what he means.' Our elders, from the store of what they call experience, may think they know what they mean by the 'free air in which the imaginative arts flourish,' and thus may even be able to explain—without meaning to deceive—the meaning of the 'Mother Art of Architecture.' Youth, meantime, has a healthy belief that architecture is a structural affair. As a human activity it has had more 'free air' than was good for it. Surely our artists can join another exclusive academy if they think there is the need for it when Registration has distinguished the artists who have defaced the country. They have done their best in the sacred name of liberty, and it is perfectly certain that the Bill will be resisted by all speculative builder amateurs who have a wider view value of the art than its practiti Youth had a handsome share whi war lasted. Sir J. M. Barrie was right he said of our elders, 'We have no tion of giving you your share. expect we shall beat you. And I much fear they will.'"

Undesirable Competition. We feel that the let protest sent by Mr. A. Cross as to a proposed petition for the extens the buildings of the Manchester Sch Technology claims our whole-h support. It would surely appear grossly unfair to hand over the ext of this fine building to other hands the original architect, unless there be ulterior reasons which we can l imagine to exist. Mr. Cross has a claim to this extension work ove other architect, and we shall be g surprised if the architectural prof fail to support his protest. Wh architect has well and faithfully s a public corporation in the desig carrying out of such a building a Manchester School of Technology it appear a manifest injustice to hand the new work to anyone else, an cannot but think the general body best professional opinion will su him.

Final and accepted Design: Cathedral of St. John the Divine, New York

Messrs. Cram & Ferguson, Architects.

When Sir Reginald Blom-
by field deprecated criticism in
. the public Press by archi-
tects of fellow-architects'
he possibly meant to say
bonum. A correspondent this
rawing attention to Sir Regi-
cal notice of the new *Daily*
ling, would appear to imply
ginald was not wholly logical.
nething to say as to putting
of buildings in back streets
r efficiency in plan will be of
nt than their exterior appear-
article is certainly not an
one, but may we now suggest
-needed criticism from Sir
on some prominent London
ould be vastly interesting ?

Twelve members of the
al Royal Institute of British
e, Architects have protested
publicly against the terms
by a provincial County Council
pointment of a draughtsman
architect's department. It
at the commencing salary is
0 per annum, rising by annual
of £10 (subject to satisfactory
a maximum of £200" ; and
pondents point out that this
an the compulsory wage for
in the district. They express
, in which we concur, that the
hould take action to protest
e exploitation of professional
; and they suggest that a sub-
should be formed to inquire
of this nature.

At the British Industries
Fair one of the stands of
special interest was that
arranged by the Rural
Bureau. The exhibit of black-
rk showed what is being done
traditional workmanship and
English metalwork. Architects
n designing country houses,
similar buildings in small
ld do well to make use of the
finding out the names of local

loor furniture in great variety,
knockers of mediæval ring
bell-pulls, and some intricate
l latches, as well as fastenings
nature. Hinges range from

A Stand at the Ideal Home Exhibition. (*See p.* 416.)

those of considerable size to small ones suitable for cupboards. Boot-scrapers were shown, and some handsome lanterns, both for suspending and for setting in wall brackets. For interior furnishing there were lamp stands and candle sconces as well as smaller candlesticks, and an umbrella-stand and curiously contrived gong, as well as tongs and a toasting-fork, a flat-iron stand and trivets. Naturally, fire-irons and dogs (a pair of these adorned with a crest executed as a terminal point to an otherwise plain design), grates and fire-guards. Last, but not least, the exhibit included larger objects, such as some handsome gates and a frame for a signboard, besides metal window frames. The counties of Gloucester, Kent and Hertfordshire already possess organisations for helping to bring together the smith and his possible patrons, but particulars about other districts can be had from the Rural Industries Bureau, 26, Eccleston-square, S.W., by those who wish to be put in touch with local craftsmen practising this time-honoured craft.

A Complimentary Dinner.

Another of those agreeable functions which are becoming more and more frequent and which do so much to stimulate the growth of good fellowship and a knowledge of each other took place a few days ago in the Duke's Room at the Holborn Restaurant, W.C., when some thirty of the friends of Mr. H. W. Wills, F.R.I.B.A., a past Editor of *The Builder*, entertained him to dinner in recognition of his journalistic services on behalf of the profession and the building industry. Mr. A. W. S. Cross, F.R.I.B.A., presided, supported by Mr. William Woodward, F.R.I.B.A.; Mr. W. R. Davidge, F.R.I.B.A., President of the Town-Planning Institute; Mr. Stanley Hamp, F.R.I.B.A.; Mr. Harry Leaning, F.S.I.; Mr. A. B. Falkner, Past President of the London Master Builders' Association; Mr. Roland B. Chessum, Past President of the London Master Builders' Association; and others. Some interesting speeches were made during the evening in reference to the work of the guest of the evening on behalf of the profession and the building industry, and his forceful personality in the profession, both in his architectural and journalistic work. During the evening Mr. Wills was presented with a Georgian silver fruit basket and an illuminated address.

Co-operation between Architects & Builders.

At the dinner referred to above, a very interesting note was struck by Mr. Roland B. Chessum on the value of intimate association between architects and builders. Both he and Mr. Falkner expressed the pleasure they experienced in carrying out work for capable architects as a matter of quite equal if not greater value to the pecuniary results they obtained. These remarks appeared to suggest the possibility of some form of association and co-operation between architects and builders by means of periodic meetings of a more or less informal character. Why not an architects' and builders' club dinner ?

The Victoria Embankment.

A little brochure has just been issued on the Victoria Embankment, with notes upon the memorials on the route and in the public gardens, with photographic slides by Mr. Francis Hooper, F.R.I.B.A. We could do with more aids of this kind to a definite knowledge of the things of interest to be seen around us in London.

GENERAL NEWS

Professional Announcements.

Messrs. Thomas Adams, F.S.I., & Longstreth Thompson, F.S.I., A.M.I.C.E., town-planning consultants, in order to extend the architectural side of their practice, have taken Mr. E. Maxwell Fry, B.Arch., A.R.I.B.A., into partnership. The firm will in future be designated Adams, Thompson & Fry, and continue to practise at 121, Victoria-street, Westminster, S.W.1, and 175, Fifth-avenue, New York.

Mr. F. G. Detmold, A.R.I.B.A., late of South Africa, and Mr. Montague C. Glover have commenced practice in partnership as Messrs. Detmold & Glover, architects and surveyors, 618, Bank Chambers, Holborn, W.C.1, and at Leigh Hill, Leigh-on-Sea. Telephones: 3146 Holborn, 351 Leigh.

Rochester Sewerage Scheme.

The vacancy for clerk of works for the Rochester sewerage scheme has now been filled by the appointment of Mr. A. C. Shelley.

Canvey Island Improvement Scheme.

The Canvey Island Council are said to have decided to construct a reinforced concrete road across the Island, a distance of nearly four miles, at a cost of £50,000, whilst other schemes under consideration include sewerage work to cost £35,000, and a bridge to the mainland at £105,000.

Scheme for Zoological Park.

With the intention of establishing a sanctuary for British birds and plants, and ultimately developing a large area for the purposes of a general zoological park, the Council of the Zoological Society of London has purchased a property of 400 acres on the edge of the Chiltern Hills between Tring and Luton from the trustees of the Ashbridge estate.

Kent Commercial Travellers' Association.

The annual dinner of the Kent Commercial Travellers' Association, held at the County Hotel, Canterbury, on Saturday, February 19, under the presidency of Mr. C. S. J. Taylor, of Messrs. Vye & Son, Ramsgate, realised £282 for the Commercial Travellers' charities. The financial year closes at the end of December Mr. Taylor would welcome further contributions

The Devil's Dyke.

The Devil's Dyke, near Brighton, has been sold to a private purchaser whose identity is being kept secret, but who is reported to have the intention of using the estate as a private residence. Some five miles from Brighton, the dyke is the highest point of the South Downs in the neighbourhood, and on clear days wonderful views of the sea and the Weald are obtainable from the summit.

Hampton Court Open Space.

A letter has been received by the London County Council from the East and West Molesey Urban District Council, stating that, in connection with the town planning of their district, they propose to schedule as one of the permanent open spaces the piece of land lying on the south side of the River Thames facing Hampton Court Palace and extending as far back as the line of railway running to Hampton Court Station.

Liverpool Statue Removed.

In order to make room for the cenotaph on the plateau of St. George's Hall, Liverpool, the statue of Lord Beaconsfield, which has stood there for 44 years, was on Tuesday removed from its pedestal and deposited on the steps leading up to the hall, to wait its new position. Professor Reilly, of the Liverpool School of Architecture, who watched the operation, said, according to the *Times*, that the new position of the statue in relation to the hall would add materially to its impressiveness.

Acoustics of Ripon Cathedral.

Lecturing recently to members of the British Institute of Certified Carpenters in London, Mr. C. B. Howdill said all our cathedrals had their "tonality." At Ripon the finely decorated stone choir screen, surmounted by the tall organ, practically divided the cathedral into two distinct halls. Each had its own note, A flat for the choir and A for the nave. The probable explanation was that the rich and elaborately carved oak canopies and stalls, which thoroughly furnished the comparatively small choir, baffled the sound waves, and the woodwork was more sound-absorbing than stone.

Rebuilding of Abingdon Bridge.

The proposals for rebuilding Abingdon Bridge have been considered by the Finance and General Purposes Committee of the Berkshire County Council, whose report will be presented to the Council at their next quarterly meeting. The special section—a committee consisting of members of the Berks and Oxford County Councils—has reported that a design for the widening and reconstruction of the half of the bridge on the Oxfordshire side, including the navigation arch, has been provisionally agreed upon and also approved by the Office of Works and the President of the R.I.B.A., representing archæological societies.

Scottish National War Memorial.

Complete agreement has been reached, it is understood, between the Office of Works, the Ancient Monuments Board, and the committee of the Scottish National War Memorial as to the design for the finish of the gable of the shrine of the memorial at Edinburgh Castle. The design approved shows the projection of the crow-stepped gable from the roof reduced, and the gable finished with crow-steps without any finial feature except a Scottish lion sejant, holding a standard, seated on the topmost step.

Clyde Valley Town Planning.

Reference to an extensive regional town-planning scheme for the Clyde Valley was made recently in a letter from the Scottish Board of Health which was read at a meeting of the District Committee of the Lower Ward of Lanarkshire. The letter stated that following on conferences of officials of local authorities the Board proposed to call a conference of representatives of local authorities in the Clyde valley with reference to regional town planning of the area from Hamilton and Wishaw to Greenock and Gourock. The meeting agreed to send representatives to the conference, and the chairman (Mr. J. Raeside Auld), Mr. John Hurll, and Mr. John Train were appointed.

The Royal Academy Exhibition, 1927.

We would remind our readers that the dates for receiving works at this year's R.A. Summer Exhibition are as follows:—

Water Colours, Pastels, Miniatures, Black-and-White Drawings, Engravings, and Architectural Drawings.—Friday, March 25.

Oil Paintings.—Saturday, March 26; and Monday, March 28.

Sculpture.—Tuesday, March 29.

Hours for the reception of works: 8 a.m. to 10 p.m., except Saturday, March 26 (8 a.m. to 2 p.m.).

Not more than three works may be sent by any one artist.

No work will be received before or after these dates. All works must be delivered at the Burlington-gardens entrance. Labels and forms can be obtained (during March only), from the Academy. Applications by letter must be addressed to The Secretary, Royal Academy of Arts, Piccadilly, W. 1, and be accompanied by a stamped and addressed envelope. The Exhibition will open on Monday, May 2, and close on Saturday, August 6.

COMPETITION N

League of Nations' Building

We are informed that after the cl of this competition, March 31, the to commence judging the plans receiv

Practical Homes Competition

This competition which we announc issue for February 18, is being promot proprietors of *The Lady*. Strictly it architectural competition, as will be from the following conditions laid do promoters:—

1. The competition is open, subje following conditions, to every reade *Lady* holding or acquiring before Ma the freehold or leasehold interest in plot of building land at Angmeri Sussex.

2. Any person qualified as above posing to build forthwith upon his or h land a house or bungalow (whether reader's own occupation or with a subsequent letting or sale of the property) shall be entitled to enter tha bungalow for the competition as soon of the necessary building plans, duly by the local authority, have been sub the Editor of *The Lady* and formally by him for that purpose.

3. For the preparation of these build competitors are at full liberty to em architect they may select; and such will be afforded every facility for super at every stage the construction of the bungalow concerned.

The following prizes are offered:—C Houses or bungalows costing not £1,200. Prize: £250. Class B.—H bungalows costing not less than £800 than £1,200. Prize: £150. Class C.— or bungalows costing not less than £500 than £800. Prize: £100. Further p medals will be awarded for furnishing, fi garden lay-outs. Full particulars obtained on application to "Moira," Offices, 39–40, Bedford-street, W.C.

Bradford Grammar School Compet

The Governors of the Bradford School, as announced in our issue for 18, invite architects to submit design petition for the new grammar school to be erected on the Clockhouse site in road, Bradford, Yorkshire. Mr. Arnol F.R.I.B.A., is the assessor. Premium £200 and £100 are offered for designs pl second and third. Full particulars of and instructions may be obtained Brear, Secretary, Grammar School, with which is supplied a plan of the s plan, which we give on page 393, clea the levels of the ground, the position a of sewers, and particulars of the gas mains, and electric cables. The new should be grouped near to, and shoul Keighley-road. Any questions which petitors desire to ask must be addres Brear, on or before March 31, an questions and answers thereto, as th considers necessary, will be sent to petitor and will form part of the conc instructions to competing architects.

The design should be simple and The buildings should be faced w throughout. It is advisable that c should make themselves acquainted local conditions. The school is to acc 1,000 boys, mainly upon two floors, the upper school, and 270 in the lowe as is possible these schools should be se self-contained though not in detach They should have separate entra rooms, lavatories, bicycle accommo covered shelters. Laboratories woul used by boys in the upper school. rooms, assembly hall, dining-room nasium should be available in comm upper and lower schools. Cloak ro be heated. Coat lockers are not re

for each boy and provision for drying
l that is desired, but separate changing
dation for games for upper and lower
ust be provided, including two or three
aths and troughs about 7 or 8 ft. long,
and cold water for feet washing. It is
that this should be provided in com-
with the ordinary cloak rooms, lava-
.., of the school. It is desirable that
mmodation should be immediately
from outside.

are invited for this competition to be
n one of the following subjects :—(1)
g of the Widths of Arterial Roads;
ge Systems—with special reference to
f of Surface Waters, but not to include Sewage Disposal; (3) Road Surfaces for Different Conditions of Traffic :—(*a*) Materials, (*b*) Climatic Conditions. If a sufficient number of entrants compete, the following prizes will be awarded :—First, £2 2s.; second, £1 11s. 6d. Essays must be sent in a sealed envelope, duly endorsed, to Mr. Percy Morris, Hon. Secretary of the Yorkshire District, Institution of Municipal and County Engineers, Town Hall, Wakefield, on or before July 31.

COMPETITIONS OPEN.

New Offices, Wiltshire Working Men's Conservative Benefit Society, Trowbridge. Assessors: Messrs. Cyril A. Farey and Robert Lowry, A. & F.R.I.B.A. Premiums amounting to £250 will be awarded. Apply Chief Secretary, Mr. Henry H. Dyer, Stallard-street, Trowbridge, Wilts. Deposit £1 1s.	Particulars published in "Builder."	Jan. 28.	Sending in date. —
Girls' Secondary School, Lytham St. Anne's. Names of experienced architects to be sent to Messrs. Wilson, Wright, Davies & Earle, 54, Moseley-street, Manchester, by March 12		Feb. 25 ..	—
Council Offices, Bognor. Architects willing to enter this competition should send their names not later than March 16 to Mr. Joseph Jubb, Clerk's Office, Bognor, by March 16. Mr. Septimus Warwick, F.R.I.B.A., assessor		Mar. 4 ..	—
Grammar School, Bradford, for 1,000 boys. Premiums: £300, £200, and £100. Mr. Arnold Mitchell, F.R.I.BA., assessor. Apply Mr. W. Brear, Secretary, Grammar School, Bradford, Yorks. Dep. £1 1s. ..		Feb. 18 and Mar. 4 ..	—
New Facades, Manchester. Competition promoted by Manchester Building Trades Exhibition. Premium £200. Assessors: Mr. H. S. Fairhurst, F.R.I.B.A, Professors C. H. Reilly, F.R.I.B.A., and A. C. Dickie, A.R.I.B.A., Mr. Francis Jones, F.R.I.B.A., and Mr. John Swarbrick, F.R.I.B.A. Apply Competition Manager, City Hall, Deansgate		Feb. 11 ..	Mar. 26
Town Hall and Library, Leith. To be erected on site in Ferry-road. Sir George Washington Brown, P.R.S.A., assessor. Premiums: £400, £300, £200, £100. Apply Mr. A. Grierson, Town Clerk, City Chambers, Edinburgh. Dep. £2 2s.		Jan. 21 and Feb. 4 ..	Apr. 30
Civic Improvements, Birmingham, around Hall of Memory. International Competition. Premium of £1,000 will be awarded author of design placed first. Further sum, not exceeding £1,000, will be divided among other competitors according to assessor's recommendation. Scheme includes: Municipal Offices, to contain City Hall, Public Library, and Lord Mayor's Mansion House. Mr. H. V. Lanchester, F.R.I.B.A., assessor. Apply Mr. Herbert H. Humphries, City Engineer, Council House, Birmingham	Particulars published in "Builder"	Oct. 15 ..	Sending in date. May 16
Edwin Austin Abbey Memorial Scholarships for Mural Painting. Two Minor Scholarships of £125 a year each, and one Major Scholarship of £250 a year. Candidates must not be over 25 and 27 years of age for the respective Scholarships on December 31 preceding the competition. Apply Secretary, Edwin Austin Abbey Memorial Scholarships, Chelsea Lodge, 42, Tite-street, S.W.3		June 11 ..	July 15
Shakespeare National Memorial Theatre, Stratford-upon-Avon. Competition open to architects of the British Isles and America. To be held in two sections: first, Sketch Designs, from which six will be selected, and the authors each paid £100 towards cost of preparing more detailed schemes, which will form second part of competition. Selected architect will be paid in accordance with R.I.B.A. schedule of charges. Apply Secretary, Shakespeare Memorial Theatre, Stratford-upon-Avon. Deposit, £1 1s. Assessors, Messrs. Robert Atkinson, F.R.I.B.A., E. Guy Dawber, P.R.I.B.A., and Cass Gilbert.		Jan. 14 ..	June 15 (Preliminary Designs)
University Buildings, Western Australia. To cost £150,000. Premiums: £400, £300, £200. Open to British subjects or citizens of U.S.A. Assessors: Professor Leslie Wilkinson, F.R.I.B.A., Mr. A. R. L. Wright, L.R.I.B.A., President Royal Institute of Architects of Western Australia, and Member of University Senate Apply Agent-General for Western Australia, "Savoy House," 115–116, Strand, London, W.C.2, or Australian Trade Commission, 44, Whitehall-street, New York, U.S.A.		Jan. 14 ..	Aug. 23

Site Plan, Bradford Grammar School Competition.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Criticism.

Sir,—In a speech at the Institute, in November, 1925, Sir Reginald Blomfield made some strong remarks about architects criticising each others' works in the public Press. In view of this, it is rather surprising to find in the centre page of a recent issue of the *Daily Mail* (March 4), a somewhat lengthy criticism by him of Northcliffe House, designed by Messrs. Ellis & Clarke. May we assume that Sir Reginald has changed his views, or that he considers this building, in an obscure back street, a matter of national importance, like Waterloo Bridge?

William Davidson.

Restoration of St. Mary Redcliffe.

Sir,—In reference to the interesting article on and sketch of this church given in your last issue, it may interest many of your readers to learn that the beautiful spire was re-built in 1871 and 1872 by Mr. George Godwin, for forty years editor of *The Builder*. I well remember the Mayor and Mayoress of Bristol ascending the 300 ft. in a lift to lay the 6 ft. diameter cap-stone in a terrific thunderstorm. The old spire was struck by lightning in 1445 and remained truncated until the above date. Another famous architect who was engaged on a general restoration of St. Mary's, in 1842, was Mr. J. Britton, F.S.A., &c.

Weston-super-Mare. Edward Vale.

Registration of Architects.

Sir,—I have been following with much interest the correspondence in your columns regarding this subject. I am thoroughly in favour of Registration, but am afraid that the form of Registration proposed will not assist the general country architect very much, though it may be of benefit in the larger towns. I happen to be in practice in a Provincial town with a large percentage of the population working people. All the builders and joiners in the town, as a rule, prepare plans, and to all intents and purposes carry on in a way, as far as they can, the business of an architect, combined with their own trades. One builder designates himself a building specialist and has in hand a large contract for a commercial firm who are extending their factory, and at least two villas or cottages. No architect is employed, nor, in his employer's opinion, is required. They are supposed to have saved the architect's fees and to be getting equally good value, and a good job.

In some of the factories a junior draughtsman is kept, and the plans after passing the town authorities are handed over to some tradesman to erect the buildings. In fact, anyone who has a little knowledge of the preparation of plans presents plans for approval to the town's authorities, some builder or joiner thereafter taking charge erecting the buildings, no architect being employed at all. The architects in the town, when they require to ask tradesmen to offer for work which requires to be estimated, prepare schedules of quantities with their client's name, and the situation of the work on the top of the first page of the schedule. On the other hand, the builder or joiner, as the case may be, goes round his sub-contractors with a plan (in many cases very defective), and does not even give the proposed employer's name or address, stating that the work will be within two miles of the Town Cross (all that is required as a basis for contractors to estimate), the reason being frankly stated that it is in case any of the architects should know who the proposed employer is and by any chance get in touch with him to get the work. These contractors are continually taking work from the architects, also copying and utilising their plans and details which may come into their hands during a building operation they may have been successful in securing a contract for, and the architect is helpless to prevent it.

Registration should be such as to safeguard the public and all architects in legitimate practices. In my opinion, Registration should aim at protecting every one from such practices as I have indicated, and make it illegal for any unregistered party to recover fees or carry on work of an architect in any form. No architect should have a preference over another and be designated "Chartered Architect"; all Registered architects should be simply "Architects" or "Chartered Architects." There is no use of Registration for the mere name architect, when any party calling himself surveyor, engineer, building specialist, &c., can carry on the work of an architect, and in many cases erect badly-planned buildings with elevations neither attractive nor artistic, and in many cases badly constructed and with inferior materials, the employer not knowing better, accepting and paying, perhaps, an inflated price, and probably being told that the architect's fees have been entirely saved.

Many architects must have experienced and know that the approval of plans in many Burghs and District Committees does not amount to very much on account of the qualification of the responsible official, who may be a road surveyor, a sanitary inspector, or an engineer, and in a few cases an architect, who is supposed to examine all plans before authority is given for erection. If Registration is not to protect the legitimate architect, we shall be just about as well off as we stand now. F.R.I.B.A.

Greater London Joint Town-Planning Committee.

Sir,—I would like to call your attention to the notes on page 310 of your issue dated February 25 last, wherein your correspondent stated that "the decision of the London County Council to limit the expenditure of the Joint Committee that will prepare a possible scheme for London to £3,000 for three years is," &c. There would appear to be some confusion in the mind of your correspondent which, if not corrected, may influence adversely some authorities in contributing their quota to the expenses of the Joint Committee.

The resolutions moved by the Minister of Health at the Conference on December 1 last, and subsequently forwarded to all local authorities within the London traffic area, includes the following resolution:—

"That the reasonable expenses Joint Committee should be met by the Planning authorities represented on th mittee contributing for a period not ex three years, a sum per annum not ex the product of one-twentieth of a pen on the assessable value for sanitary p in their respective districts, or of such parishes therein as are included in t covered by the Joint Committee."

One-twentieth of a penny rate so levi estimated to produce £16,000 per annu local authorities concerned are now in the of passing the resolutions agreeing t contribution. The L.C.C. at this stage to make a contribution of £3,000.

The impression created by the parag your issue is that the L.C.C., by this vot limited the expenditure of the Joint Com which is tantamount to saying that the has financial power over 154 local aut represented on the Committee. This, of is wrong. The whole of the local aut in the area are, or will be, contributin quota, in addition to the contribution of voted by the L.C.C. From the point of the future growth of London, it is ext important that they should do so, and t suggestion should be made that their po so do have been limited by the L.C.C On the contrary, the L.C.C. vote shou as a stimulus. A. T. Price, *Secre*

The Garden Cities and Town Planning Association.

Structural Remains of Early Londo

The Secretary of the R.I.B.A. asks publish the following letter which h received from the Librarian and Cura the Guildhall Library:—

[Copy.]

Dear Sir,—The Committee in charge Guildhall Museum are anxious to enlist th of architects whose practice may includ in the City, with a view to identifyin recording the structural remains of early L (more particularly Roman London), as th brought to light by excavations. The C of the Society of Antiquaries and the auth of the British Museum and the London M have kindly promised to give all possible ance in this direction, and I am instruc my Committee to ask if your Council will valuable aid by giving this letter publi your journal. It is intended to establi a system for the registration of all authen discoveries as they occur. The Com realise that under present-day condition is often great difficulty in delaying fo than a brief period work which must nec destroy, in most cases, earlier sub-stru Accordingly, arrangements have been which will enable detailed measurement taken, within a short space of time, remains of historical importance.

Any communication on this subject ad to me here will receive immediate atter

ARCHITECTURE CLUB

h annual general meeting of members was held at the Architectural Asso- 36, Bedford-square, on Thursday, en the President, Mr. J. C. Squire, chair. In delivering the report for 25–6, the President said that during they had witnessed the successful three last battles against the pro- ction of present amenities—first, the Waterloo Bridge, the City churches, the Foundling Hospital site—or at feat of the Covent Garden Market

architecture generally, he looked when the speculative builder would tention to design. Only the design buildings and country houses were ewhere the speculative builder was There was a good scheme current in hat might be called the "royalty" ere many designs of all types were a book, and builders were allowed lesign at a charge of about 10s.

the transaction of Club business, Yerbury, in the unavoidable absence C. H. Reilly, opened what proved to teresting discussion on "English and chitecture." The speaker said that e month's duration to America gave of a full survey, but his impression ere was a lot of building but little New York especially, he thought, uted nothing towards the cause of as understood in Europe. The ercome by the Americans were solely gineering and organisation. Their was incredible; it produced effi- conomical buildings, but it crushed American design was stale and m lack of volition. He would leave r and Telephone buildings outside on. Generally it was the slavish he past that was such a sickening He would say that the younger men this, but they were up against an which was run on huge overhead l which had no time to design; ld be lost. In the case of the uilding, the architect—Raymond expended a lot of thought on it, and as he told the speaker, he had not y out of it.

s Allom, opposing the opener, said ns had a great desire for good taste. to think that to travel with money over Greece and Rome was the way t inspiration and no one expended endeavour than the American in triumphs of the past.

the question of bridges, he could hing that the Royal Commission mething a little more stately than ecker bridge for Charing Cross. to architecture, he thought it a pity which had a great chance, should h so many bad buildings. Criti- rbury's opinion of the American lesign, he said that a man who a great office and keep his staff in s doing the finest service of all for

Hamp said he felt more than a etic towards Mr. Yerbury's point thought that Sir Charles had not d that what Mr. Yerbury wanted itecture which represented the of life, rather than the slavish e past. If they were to sit down luce line for line St. Paul's, it ke them a Sir Christopher Wren. n-rican architecture with that of mburg or other European cities, erican architecture lacked some- had. Modern Continental work main than some in America.

Thompson said that the Ameri- planning. Their stations, apart- nd hotels were fool-proof. But ne to think out elevations—they had to turn out plans for the builders. Some high buildings in New York, however, were very fine, as the Shelton Hotel. Building in America was going ahead like wildfire. In three months there he had seen more buildings going up than in ten years in Great Britain.

Mr. Trystan Edwards said that in America there was no difference in the design of commercial and private houses. Thus when they came to design a commercial or a public building, they found that Mr. Smith or Mr. Jones had taken their best *motifs* from them.

Mr. Charles Marriott said that good architecture lay in adapting tradition to modern circumstances. The Americans were solving their problems without paying attention to the way the result looked.

Summing up, Mr. J. C. Squire said he had been to America over five years ago and agreed up to a point with Mr. Yerbury. Box building was a contribution to building not for what it gave but for what it discarded. If one picked out the best of American skyscrapers, one found them extraordinarily interesting, but not to such an extent as the modern Continental work.

Mr. Yerbury then replied briefly to the points raised.

MEETINGS

SATURDAY, *March* 12.

Glasgow Architectural Craftsmens' Society.—Visit to Oswald-street bridge. At 3 p.m.

Institution of Municipal and County Engineers.—Visit to Bath.

Association of Architects', Surveyors' and Technical Assistants.—Visit to County Hall, S.E.1. At 2 p.m.

MONDAY, *March* 14.

Royal Institute of British Architects.—Mr. Howard Robertson, F.R.I.B.A., on "Modern French Architecture." At 8 p.m.

Edinburgh Architectural Association.—Annual General Meeting. At 8 p.m.

Royal Sanitary Institute.—Mr. J. H. Clarke on "Museum Demonstration—Drain Testing." At 6 p.m.

TUESDAY, *March* 15.

Royal Institute of British Architects.—Professor C. H. Reilly on "Liverpool Cathedral." At 8 p.m.

London Society.—Visit to Exhibition at Bermondsey Public Library, Spa-road, S.E.16. 3.30 p.m.

Institute of Arbitrators.—Discussion by Capt. W. T. Creswell on "Arbitration in Disputes." At 28, Bedford-square, W.C.1. 4.30 p.m.

WEDNESDAY, *March* 16.

Institution of Civil Engineers.—Mr. F. C. Jordan and Dr. Oscar Faber on "Fire-Protection in Buildings, with special reference to Reinforced-concrete Construction and Automatic Sprinklers." At 6.30 p.m.

Edinburgh Architectural Association.—Annual General Meeting: President's Valedictory Address. At 8 p.m.

Royal Society of Arts.—Mr. R. E. Mortimer Wheeler on "History by Excavation." 8 p.m.

Town Planning Institute.—Alderman E. G. Culpin on "Decentralisation." At 6 p.m.

St. Paul's Ecclesiological Society.—Mr. H. de Koningh on "Ecclesiastical and other Enamels." At 9, Conduit-street, W.1. 8 p.m.

THURSDAY, *March* 17.

London County Council.—Mr. I. C. Goodison on "English Furniture, period of William and Mary and Queen Anne." At Geffrye Museum, Kingsland-road, E.2. 7.30 p.m.

Society of Antiquaries.—Miss N. F. Layard on "A Stone Age Settlement of the Transition Period in the Colne Valley, Essex." Also Mr. R. A. Smith on "Early Pottery from Castle Hill, Scarborough." At 8.30 p.m.

British Electrical Development Association.—Annual Dinner. At Savoy Hotel, Strand, W.C.2. 7.30 p.m.

MANCHESTER COLLEGE OF TECHNOLOGY

We have been asked to publish the following correspondence:—

THE EDITOR, *The Builder.*

March 7, 1927.

SIR,—I shall be glad if you can find room in the next issue of your journal for the insertion of the enclosed copies of letters (*a*) to the Town Clerk of Manchester, (*b*) to the President and Council of the Royal Institute of British Architects, and (*c*) to the Secretary of the Manchester Society of Architects.

Yours faithfully,

ALFRED W. S. CROSS.

(*A*)

MANCHESTER COLLEGE OF TECHNOLOGY.

March 7, 1927.

DEAR SIR,—My attention has been called to the fact that, under the head of "Competition Notes," a memorandum appeared in an architectural journal of the 4th instant, to the effect that the Manchester Corporation have accepted three nominations, made by the President of the R.I.B.A., for the appointment of assessors to act in the proposed competition for the extension of the Manchester College of Technology. As the architect of the existing building, I strongly protest against the Corporation's action in thus promoting a competition, without good and sufficient reasons, for the extension or completion of the work of a living architect.

The great slur cast upon the personal character or professional reputation of the victim of a policy which, I venture to say is, in this instance, both unjust and unmerited, must be apparent to all concerned.

I challenge the promoters of the competition in question to bring forward any good and sufficient reasons for a course of action, happily rare in this country, which humanly speaking can only have a very disastrous result upon my professional welfare. The work involved in designing and supervising the erection of the College of Technology at Manchester occupied some of the best working years of my life, and I do not hesitate to say that the building is both well planned and well constructed.

For your information I enclose a copy of a letter of protest I am sending to the President and Council of the Royal Institute of British Architects respecting their action in the matter.

Yours faithfully,

(Signed) A. W. S. CROSS,
Fellow and former Vice-President
of the R.I.B.A.

P.S.—In order to make my position clear to the President and Council I am sending a copy of this letter to the R.I.B.A.

The Town Clerk.
Town Hall, Manchester.

(*B*)

March 7, 1927.

The President and Council,
Royal Institute of British Architects,
9, Conduit-street, W.1.

MANCHESTER COLLEGE OF TECHNOLOGY.

GENTLEMEN,—For your information I enclose a copy of the letter I have sent to the Town Clerk of Manchester respecting the proposed competition for this building.

As I strongly object to the principle of promoting competitions for the alteration or completion of buildings designed by living architects who are still in practice, I hereby resign my membership of the R.I.B.A.

I am, Gentlemen,
Your faithfully,
(Signed) A. W. S. CROSS.

(*C*)

March 7, 1927.

The Secretary,
The Manchester Society of Architects.

MANCHESTER COLLEGE OF TECHNOLOGY.

DEAR SIR,—For the information of your Society I am sending you copies of the letters sent herein (*a*) to the Town Clerk, Manchester, and (*b*) to the President and Council of the R.I.B.A.

Yours faithfully,

ALFRED W. S. CROSS.

AMERICAN APARTMENT HOUSES.—IX

BY F. E. BENNETT, A.R.I.B.A.

Stairways.

THE stairways rarely or never being developed as architectural features are of minimum dimensions within the regulations of the law and kept closely to it. The "Tenement House Law" of New York, by its regulations, roughly furnishes a description of them.

(*c*) Every apartment must be accessible to this or to a fire tower.

(*d*) Every stair with its halls must be separated from other parts by 4 in. partitions of brick, &c.

(*e*) Provide in fireproof buildings one stair for every 36 suites of rooms.

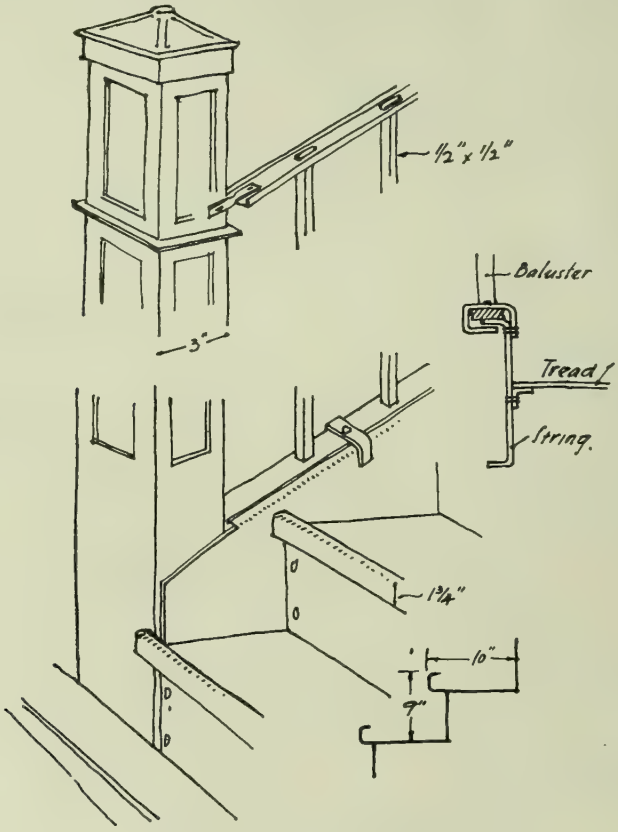

FIG. 39.—TOWER STAIR. ALL STEEL.

Every "tenement house" must have two ways of exit:—

(1) A staircase.

(2) An external iron fire escape or another staircase.

(2a) A fire tower.

Staircase (1) above:—

(*a*) Minimum size 8 in. rise by 10 in. tread by 3 ft. in the clear.

(*b*) Must extend from ground floor to roof.

2. If no more than 48 suites, may make stairs 4 ft. 6 in. clear instead of two stairways.

3. If 84 suites and not more, may have one stair 3 ft. wide, and one stair 4 ft. 6 in. wide.

(*f*) Windows allowed only in fireproof building where there is power elevator.

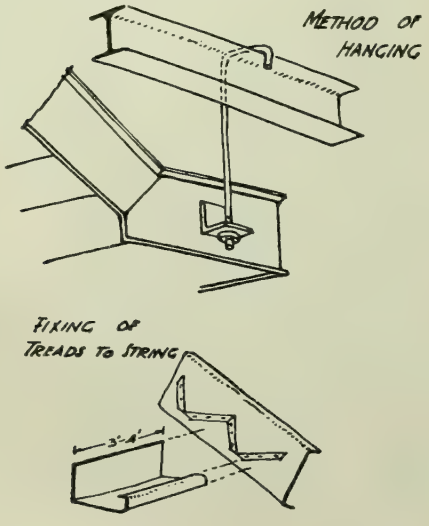

FIG. 40.—STAIRCASE DETAILS.

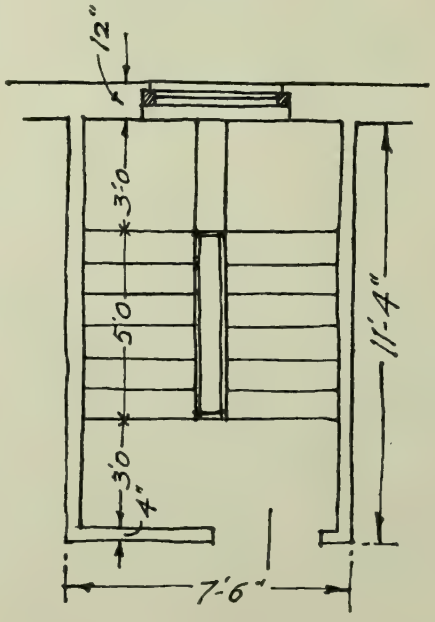

FIG. 41.—PLAN OF NORMAL STAIRWAY.

(*g*) All stairs and stair halls to hav
except handrails and hardwood treads

(*h*) Risers, strings and balusters
metal or stone.

(*i*) May have one ordinary openin
or court. All other doors to be fir
self-closing.

External Fire Escape (2).

(*a*) Must connect from a living roo
room of each apartment.

(*b*) Must be located on an outer wa
not on a court.

(*c*) May project over public way
be 3 ft. wide.

(*d*) Maximum rise 9 in.; maxim
60 deg.

(*e*) Provide drop ladders at lower

of Architecture.—Mr. H. Chalton , Mr. Arthur Stratton, Professor L. B. Mr. W. H. Ansell.

ions of Simple Structures.—Mr. Donald

—Mr. Louis de Soissons, Mr. L. H. Mr. Oswald Milne.

ctional Design and the Properties and ilding Materials.—Mr. W. S. Purchon, Duncan.

FINAL AND SPECIAL.

—Mr. Louis de Soissons, Mr. L. H. Mr. Oswald Milne.

tion.—Professor A. C. Dickie, Mr. meron, Mr. W. E. Vernon Crompton, Fraser.

—Mr. W. R. Davidge.

tions and the Properties and Uses of Materials.—Mr. H. D. Searles-Wood.

nal Practice.—Major Harry Barnes, R. Mackenzie.

anning.—Mr. W. A. Harvey.

Candidates.—It was decided that ndidate passes in at least two subjects rmediate or Final Examination, he equired to take the whole of the n at a subsequent sitting.

ters.—It was decided that in the whereby after October 1, 1927, no one will be registered as a Probationer unless that person has passed one of the recognised public examinations in the required subjects, the date December 31, 1928, be substituted for October 1, 1927, and that no further extension be made as the Board of Architectural Education regard the school leaving certificate as constituting the minimum standard of general education which should be attained by a professional man.

The Matriculation and School Leaving Certificate Examinations of the following Universities were included in the list of examinations recognised for the Probationership :—Aligarh, Allahabad, Benares Hindoo, Bombay, Calcutta, Decca, Delhi, Lucknow, Mysore, Nagpur, Hyderabad (Deccan), Patna, Punjab, Rangoon.

R.I.B.A. (Henry Jarvis) Studentship at the British School at Rome.—It was decided that the regulations be amended to the effect that the winner of the R.I.B.A. (Henry Jarvis) Studentship at the British School at Rome must be eligible to become a Student or Associate of the R.I.B.A.

Studentship.—The following were elected Students of the R.I.B.A. :—C. F. Blythin, P. S. Leask, S. J. Narwekar, D. H. Rennett.

Membership.—Eighteen candidates were nominated for the Fellowship; thirty for the Associateship; one for the Hon. Associateship.

Resignations.—The following resignations were accepted :—Alfred Swash, F.R.I.B.A., Arthur Hindle, L.R.I.B.A., G. H. Isitt, L.R.I.B.A., Edgar Prairie, L.R.I.B.A., E. A. Pryer, L.R.I.B.A., L. H. Wilkinson, L.R.I.B.A.

Retired Fellowship.—The following members were transferred to the Retired Fellowship :—Francis J. Sturdy, elected Associate 1882, Fellow 1907; Arthur Sykes, elected Associate 1888, Fellow 1906.

Applications for Election as Licentiates under Section III (f) of the Supplemental Charter of 1925 :—Five applications were approved.

The George Wittet Memorial Fund.—A subscription of £5 5s. was made to the George Wittet Memorial Fund.

The Tite Prize and the Soane Medallion.

Preliminary "en loge" Competitions.—Attention is called by the Board of Architectural Education to the fact that the preliminary *en loge* competitions for the Tite Prize and the Soane Medallion will be held on April 27 and 28, respectively, instead of April 7 and 8, as previously announced.

Exhibition of Mural Paintings.

An exhibition of mural paintings illustrating the history of Rochester, and executed by Professor Gerald Moira for the new Foord Almshouses at Rochester, which were designed by Mr. E. Guy Dawber, P.R.I.B.A., will be held in the Galleries of the Royal Institute of British Architects, 9, Conduit-street, W.1, on Thursday, March 17, and Friday, March 18, between 10 a.m. and 6 p.m. Admission free.

Students' Evening.

A students' evening was held on Thursday, March 3, in the Galleries of the R.I.B.A., where the architects' working drawings of the following buildings are exhibited: House at Stowell Hill; House at Ashley Chase, Dorset; St. Mary's, Harrogate; Kensington Kinema. Lent by Mr. E. Guy Dawber, P.R.I.B.A.; Mr. Walter Tapper, A.R.A., F.R.I.B.A.; and Messrs. Granger and Leathart, AA.R.I.B.A. Mr. Hitch (representing Mr. Dawber), Mr. Granger, and Mr. Leathart attended and explained the special points of interest in the various drawings.

BIRMINGHAM ARCHITECTURAL ASSOCIATION.

The eighth general meeting of the session was held at the Association's rooms, the Royal Society of Artists' Buildings, New-street, on March 4, the President, Mr. Holland W. Hobbiss, A.R.I.B.A., in the chair, when Mr. Harold Baker, F.R.P.S., delivered a lecture, illustrated by numerous lantern slides, on the subject of "The Origin and Development of the English Castle." We are informed that—

"The lecturer traced the castle from its earliest origin, and took his audience back to 2,000 years B.C. That the original "castle" was but a fortified position was well exemplified and the popular fallacy that herring-bone masonry (such as occurs in the curtain wall at Tamworth Castle) must be of Saxon origin; that the term or affix "beorh," or bury—a hill—and "burh," whence borough, signified a castle, as we moderns understand the term; and that early moats must have been filled with water, were exploded by the lecturer on excellent authority and personal investigation. Every feature in the architecture of the castle, said the lecturer, came about in a natural way, resulting from progressive experiences and ingenuity in the best methods for defence. Nothing was shaped or constructed for fun or æsthetic effect; everything had a military significance.

"The lecturer traced the gradual development of the castle plan throughout the ages, and clearly showed how the large house plan of to-day had its origin and still retained some of the features of the old-time castle, minus its defensive properties, which were no longer essential."

A vote of thanks was accorded to the lecturer, and amongst the speakers were Messrs. A. J. Swan, F.R.I.B.A., H. Goulborn, L.R.I.B.A., W. H. D. Caple, F.R.I.B.A., and C. S. Madeley, A.R.I.B.A.

ASSOCIATION OF ARCHITECTS, SURVEYORS AND TECHNICAL ASSISTANTS.

A large party of members of the Metropolitan Division of this Association recently paid a visit to the new building in Regent-street of Messrs. Austin Reed, Ltd. The third floor, which is designed on the lines of the interior of a Tudor house, attracted particular attention. The firm's crest over the Tudor fireplace is based on a diamond shape, with a Red Lion in a centre square, which is surrounded by pieces shaped to represent summits—hence Summit House, Red Lion-square. Throughout the fittings are designed to facilitate the display of men's wear. For the finish of the main staircase and third floor marble was obtained direct from Rome. The water supply is obtained from an artesian well, the depth being 500 ft.

On behalf of the Association, Mr. Shepard thanked the manager for conducting them over the premises and congratulated Mr. Austin Reed on the work of his architects, Messrs. Westwood & Emberton.

SANITATION TWO THOUSAND YEARS AGO

TOMBS and works of public utility—aqueducts and bridges, formed the subject of a recent lecture by Sir Banister Fletcher, V.-P.R.I.B.A., at the Central School of Arts and Crafts. The genius of the Romans for organisation, he said, was nowhere better demonstrated than in their provision for a good supply of water for the living and in their regulations for the burial of the dead outside the city walls. An ample water supply was necessary for the Imperial City, and it was found in the neighbouring hills. They set to work to pile up stone upon stone to form the great arches which carried the water in a covered "specus," free from contamination. It might be asked why they expended money and labour in carrying water at such a height instead of underground? The reply was that pipes had to be made of costly lead or bronze; the Romans had not the lead, and bronze was still more costly. It was thus cheaper by forced human labour to construct these great aqueducts leading across valleys and rivers into Rome. The regulations for the water supply threw light upon Roman administrative methods, for officials were appointed by the Senate to secure the purity of the water. Judging from their careful provision of water for thermæ, fountains and houses, it would appear in those far-off days cleanliness was next to godliness among the Romans. They also strove to secure the sanitation of the city by prohibiting burial within its walls, and thus it was that monumental tombs of different types lined the roads that approached Rome and Pompeii, and even the great Mausoleum of Hadrian was on the other side of the Tiber.

Woolwich and District Memorial Hospital.

In the vicinity of the Metropolis are two outstanding heights commanding panoramic views of sylvan beauty—on the west Richmond Hill, where stands the Star and Garter Home, and on the east Shooter's Hill, on the crown of which stand the new buildings, now approaching completion, of the Woolwich and District Memorial Hospital, which have been erected in memory of those of the locality who fell in the Great War. Preliminary works in regard to levels, the general lay-out, forming roads, external courts, terracing, and fencing the site, reinforced foundations, concrete retaining walls, and substructure were undertaken by the Borough Council of Woolwich, and carried out with the unemployment scheme under the direction of Mr. John Sutcliffe, A.M.I.C.E., Borough Engineer. The reinforced concrete walls and foundations have been designed and supervised by Mr. Harold Cane, M.Inst.S.E.

The War Memorial, centred in the building on the line of two main approach corridors intersected by a saucer dome, is a cenotaph which contains the Roll of Honour in a volume executed by Mr. Grailly Hewitt, deposited in a bronze niche with a perpetual light. This is set in a suitable surrounding of marbles and mosaic. Surmounting the memorial is a representation of the Good Samaritan, executed in Della Robbia ware by Messrs. Doulton & Co., Ltd., the sculptor being Mr. Gilbert Bayes. The walls are panelled in polished marbles, and the floor is laid in unpolished marble. Adjoining, in the memorial space, are two small stained-glass windows representing St. Joan of Arc and St. George of England, designed and executed by Mr. F. C. Eden. At this point is a courtyard with small fishpond and fountain by Messrs. Hugh Dixon & Co., who have laid out the garden surrounding. The work has been supervised by Mr. W. J. Genna, as clerk of works, and of Mr. Hogg, the contractors' foreman. Engineering work has been carried out under the direction of Mr. T. J. R. Kiernan, B.Sc., M.I.C.E.

The plans show in tentative form the proposals and embody the general requirements set forth to build the hospital in three phases, viz.:—

First section to accommodate approximately 110 beds, as indicated on block plan.

Second section to accommodate an additional 104 beds, shown hatched on block plan.

Third section to complete the ultimate accommodation for 300 beds, in outline on block plan.

In planning the hospital, it has been the architects' endeavour to present as far as possible a complete building facing Shooter's Hill-road. This has been attained, and ultimate extensions are so provided as to be readily accessible for future building operations.

In the disposition of the buildings on the site, the fundamental question of aspect has necessarily been the first consideration, and for that reason full advantage has been taken of the southern slope and the fine prospect, by placing all the main ward blocks on that side. These wards are, as will be observed from the plan, radiating from the main hospital corridor, which is formed in a gently sweeping line approximately on the ridge. By altering the direction by 7½ degs. at each intersection of the ward block, the bisecting lines of the angles thus formed become the axial lines of the several ward units. Several advantages accrue from this arrangement. In the first case, the total length of the main corridor is shortened by approximately 30 ft., and effecting economies in several ways. Secondly, although the distance between the ward entrances from the main corridor is thus shortened, the radiation of wards secures a larger intervening space between the wards, and therefore a better ventilation of the courts between. Such ventilation of the courts is also considerably assisted by the natural fall of the ground in a southerly direction. Other equally important factors taken into account before settling the disposition of the buildings have been such questions as drainage, reduction of excessive underbuilding with a view to economy in foundation work, and the elimination of as much waste space naturally incidental to a site of this character.

In the central administrative unit are placed the casualty unit, secretarial offices, staff quarters, including matron, R.M.O.'s, and the kitchen services, stores, &c. The complete main servants' accommodation is planned on the upper story, and this will temporarily provide sleeping accommodation for the nurses on the first floor, approached from the hospital corridor. These rooms will later be vacated by the nurses when the first portion of the home is built to provide for the 200 bed scheme, and will then be available for the maid servants required.

A fine X-ray and electric therapeutic is planned in the upper floor adjacent to the main hospital corridor, and readily accessible from the wards and by the out-patients.

The operating theatre unit is placed on the ground floor wards and both theatres are on this level in dual form, with a common sterilising room between them, doors being provided therefrom to each of the theatres. A common "scrub up" room is provided, serving the two theatres, with a wide doorway between. Two anæsthetizing rooms, surgeon's room, with shower nurses' rooms, and stores, are planned within the unit, the whole being entirely disconnected by means of a "cut-off" lobby. Beneath the operating theatre unit is placed the surgical instrument workshop, surgical dressings store and main steriliser, together with a portion of the linen department.

Careful attention has been given to the planning of the ward units; each of these will, with the pay patients' cubicles, accommodate 26 patients, two beds of which are also placed in single bed wards, which have been planned with bays in order to pick up the southern sunshine as far as possible. The following rooms are in addition to each unit: Ward kitchen with food larder; linen bay with open lobby to provide light and ventilation to the ward corridor; patients' clothes; clinical room; bath room; wash-up room for utensils; ward maids' closet; nurses' lavatory; and a small sisters' room. The sink room is so planned as to be entered direct only from across ventilated lobby; from this lobby also the patients' w.c.s are approached.

Messrs. William A. Pite, Son, & Fairweather are the architects.

The general contractors are Messrs. Foster & Dicksee, Ltd., Rugby and London, and following is a list of the sub-contractors: J. Avery & Co., light-tight blinds; Bratt Colbran & Co., fireplaces; Bromsgrove Guild, Ltd., rain-water heads; Caxton Floors, Ltd. hollow tile floors and roofs; Clark, Hunt & Co., iron railings; Dent & Hellyer, Ltd., sanitary fittings; Diespeker & Co., Ltd., terrazzo floors and dadoes; Doloment Ltd., jointless floors; Earp & Hobbs, marble work; T. Elsley, Ltd., rain water heads; J. Gibbons, Ltd., steel casements, locks and furniture; J. A. King & Co., ferro-glass pavement and roof lights; Korkoid and Ruboleum Tile Co., korkwood tile floors; Metro-Vick, Ltd., lamp standards and electric light fittings; F. A. Norris & Co., L railings; G. Seale & Son, Ltd., Self Engineering Co., valves; St Adams, wood block flooring; Vitrol Co., vitrolite; J. P. White & Son doors, tables, benches, etc.; Hill & Ltd., gates and boundary railings; Plaster Co., plaster; A. Higginbo Sons, of Idle, Bradford, plumbing an ing; Paripan, Ltd., enamel paint; Adlard & Co., slates and tiles; Guild, bronze grille to memorial; Li Trinidad Lake Asphalte Co., aspha worth & Carr, Ltd., heating, hot wa ply, cold water, gas and steam sterilising and cooking plant; Cash Ltd., electric wiring & fittings for li power; Siemens Bros. & Co., Ltd., tel clocks and bells; Etchells, Congdon electric lifts; A. G. Enock & Co refrigeration plant; Manlove, Alliott Ltd., sterilisers; Jas. Slater & Co cooking plant.

Fresco Decorations.

These designs, painted by Mr. Greiffenhagen, R.A., were on view in a at the recent British Industries Fai White City, designed by Messrs. Richa Gill, FF.R.I.B.A.

House in Mill Way, Mill Hil

This house, which has been recen pleted, is finished externally with faced cement, coloured white. Relief to the front elevation, which faces sou by the bay windows, with their d brick mullions and tiled sills and hea eaves, having a two-feet projection, pleasant contrast of light and shad roof is tiled with hand-made sand-fac Mr. Guy H. Nicholls was the arc

House, Coombe Warren.

This house is on the FitzGeorge es joining the Coombe Hill golf cours walls are of Dorking bricks, and ol used for the half timber work. V hand-made antique tiles are used for and tile hanging on the south sid ornamental plaster ceilings are by J. Sons, and the dining-room and hall p by Johnson & Swaby, of Gainsborou billiard room is in Columbia pine.

The contractors were Messrs. T Hall, of Morden, Surrey, and the Messrs. Harold Bailey & Guilford F. & L.R.I.B.A.

Club House at Norwich.

This building, which has been erected at the Victoria Bowling Gre wich, is constructed of timber frami a cement concrete plinth. It is externally with "Ten Test" so boards, rendered on the outer face, fi Atlas White cement stucco, and ro Norfolk reed thatching. The interior the framing and ceilings are lined wit fibre boards.

The contractors were Messrs. J. Son, Ltd., of Norwich. Messrs. Bros., of Salhouse, Norfolk, thatchers, and the club house was and carried out under the superinte Mr. Albert C. Havers, F.R.I. Norwich.

Offices, Shops and Flats, High-street

This block was erected in two which fact had an important influen design. There was a very irregular at the junction of High-street and lane, but the co-operation of the Northwood U.D.C. enabled a giv building line to be adopted which ob mutilation of the design. The pren erected by Mr. A. E. A. Prowting, t for his own offices and for letting. T ing were sub-contractors:—Messrs. rence & Sons (multi-coloured brick sand-faced roofing tiles), Hope Crittall Ltd. (wrought-iron casem Pavements Co. (terrazzo stairs), Akers & Co. (central heating).

The architect was Mr. F. Herb ford, L.R.I.B.A., of Ruislip.

PARTHENON STUDIES

By W. R. LETHABY.

II.—THE ELGIN EXPEDITION.

LORD ELGIN'S researches and discoveries in Greece were long obscured by his acquisition of the famous "marbles." An adequate account of his work was only given so lately as 1916 by Mr. Arthur Smith, as a centenary memorial in the *Hellenic Journal*. Most of the finer drawings made by his artists for the purpose of a large work of record perished by shipwreck, but some of the sketches and diagrams which were preserved still lie unpublished in the Museum.

When about thirty-three years old, Elgin was appointed Ambassador at Constantinople. In his own description of his objects and work, he said, "The idea was suggested to me in the year 1799, at the period of my nomination to the Embassy at Constantinople, by Mr. Harrison, an architect who was working for me in Scotland, and who had passed the greater part of his life in Rome, and his observation was that, though the public was in possession of general knowledge yet they had nothing to convey to artists that which the actual representation by cast would give them. I mentioned it to Lord Grenville, Mr. Pitt, and Mr. Dundas that the Government might be induced to take it up. The answer was entirely negative. . . . When I went to Sicily, I met Sir William Hamilton; he encouraged my idea and applied to the King of Naples for me to engage his painter Lusieri, who was employed on views of Sicily, who went with Mr. Hamilton [private secretary] to Rome and engaged five other artists, who accompanied him to Turkey, two architects, two modellers, and one figure painter. They reached Constantinople, May, 1800. I sent them to Athens as soon as opportunity offered. For several months they had no access to the Acropolis, except for drawing, and that at five guineas a day; that lasted from August, 1800, till April, 1801. During that period my artists were employed in the town of Athens. With the change of affairs in Turkey facilities were increased, and about the middle of the summer all difficulties were removed. The same continued till my departure from Turkey in January, 1803, at which period I withdrew five of the six artists. Till 1812 Lusieri remained . . . The permission was to draw, model and remove. Monsieur de Choiseul had the same permission and some of the things he removed are now in my collection. . . . I employed three or four hundred people a day. . . . From the period of Stuart's visit very great destruction had taken place. An old temple on the Ilissus had disappeared; the Turks have been continually defacing the heads, and they have acknowledged to me that they have pounded down statues to convert into mortar. It was upon these suggestions that I proceeded to remove as much of the sculpture as I conveniently could; it was no part of my original plan to bring away anything but my models. . . . In the modern walls, these things are built up promiscuously with common stones."

Thomas Harrison (of Richmond, Yorkshire), the architect, built Broomhall, Fifeshire, the residence of Lord Elgin, in 1796, and the first idea seems to have been that the collection would have been for this house. He was one of those men of high powers and wide culture who still, in those days, could exist and find employment in un-London England. After his return from Rome he erected several public buildings, including bridges, the most remarkable of which is the Grosvenor Bridge at Chester, of 200 ft. span over the River Dee.

The artists engaged by Hamilton for the work were a figure painter, Don Tita (Battista) Lusieri, a draughtsman, Fedor (Theodore), a Calmuc, Signor Balestra, who is mentioned as "the first architect there" (Rome), Sebastian Ittar, "a young man of great talent," and two *formatori* (plaster moulders). Clarke, who saw Lusieri at work on the Acropolis, testifies to the exquisite accuracy of "this celebrated artist (a native of Naples) long employed among the ruins of Agrigentum." A water-colour drawing reproduced by Mr. Arthur Smith proves that this estimate of his powers was just, and another drawing of sculpture by Fedor shows that he, too, drew very accurately.

A picturesque account of some of the happenings in Athens is given in the recently published *Letters of Mary Nisbet, Countess of Elgin* (1926). She speaks of Feodor as "easily wearying and of invincible idleness." Hamilton, who has been mentioned was Elgin's private secretary, Lady Elgin calls him "our Hamilton." Philip Hunt, chaplain to the Embassy, was Elgin's chief agent in Athens. The party made extended explorations of ancient sites in Greece, visiting amongst other places Tiryns and Mycenæ. Lady Elgin crept into the "Treasury of Atreus" on "all fours," but later Elgin had the great doorway excavated. "We found many fragments of vases and some ornamental marble which covered the outside." These were the highly decorated shafts, lintel, and casings of the doorway. Hunt first visited Mycenæ in 1801.

At Athens excavations were also made. The floor of the Parthenon was cleared and, as reported by Clarke, it was found that the pavement was of white marble, the Porch of the Erechtheum was exposed to the bases of the columns: scaffolds were erected, monuments were measured, and a great collection of casts and drawings was made. It was a terrible loss that the drawings were drowned.

"My whole plan," said Lord Elgin in evidence, "was to measure and draw everything that remained . . . it was no part of my original plan to bring away anything but my models." In 1801 he revised his scheme and obtained a *firman* for the removal of inscribed and sculptured stones. It must have seemed that devastations and decay would go on until not one stone remained on another, and it may not be doubted that Lord Elgin thought that in removing the sculptures he was acting for art and learning.

A writer in the *Gentleman's Magazine*, 1810, asks: "Was he for fear of offending the few who might visit Athens the little time these exquisite things would be suffered to exist to neglect the powers he had of placing them in security?"

In the enquiry it was mentioned that the Turks fired at the figures, and bullet marks may be observed on the marbles in the Museum. In 1801 Lusieri, one of the artists employed by Lord Elgin, had reported that parts of the structure were being continuously destroyed in order to extract the lead with which the cramps were fixed. "In half a century there will not remain one stone on another" (J. H. S., 1916, p. 198). If it could have been foreseen that a free Greece would arise in a generation, then it would have been an obvious wrong to bring the sculptures away, but even the modern Greeks have thought it wise to remove many which remained from the building.

The Parthenon sculptures at the British Museum were not all removed from the ruined building. "By purchasing the house built against the columns of the [western] portico in order to excavate, Lord Elgin had the satisfaction of recovering the greater part of the statue of Victory [Amphitrite] in a drapery which discovers the fine form with exquisite delicacy; also the torso of Jupiter [Poseidon] and Vulcan [Hermes] and the breast of Minerva, together with other fragments." (*Pursuits*, 1811). In the early lists of the marbles several are grouped under the heading "Fragments the names or places of which are not positively ascertained." The exquisite Iris of the west front appears in this list, so does the seated female figure "supposed to have been Latona," so also does a "female figure sitting supposed to belong to group C"—that is, the first of the "Fates" of the east pediment.

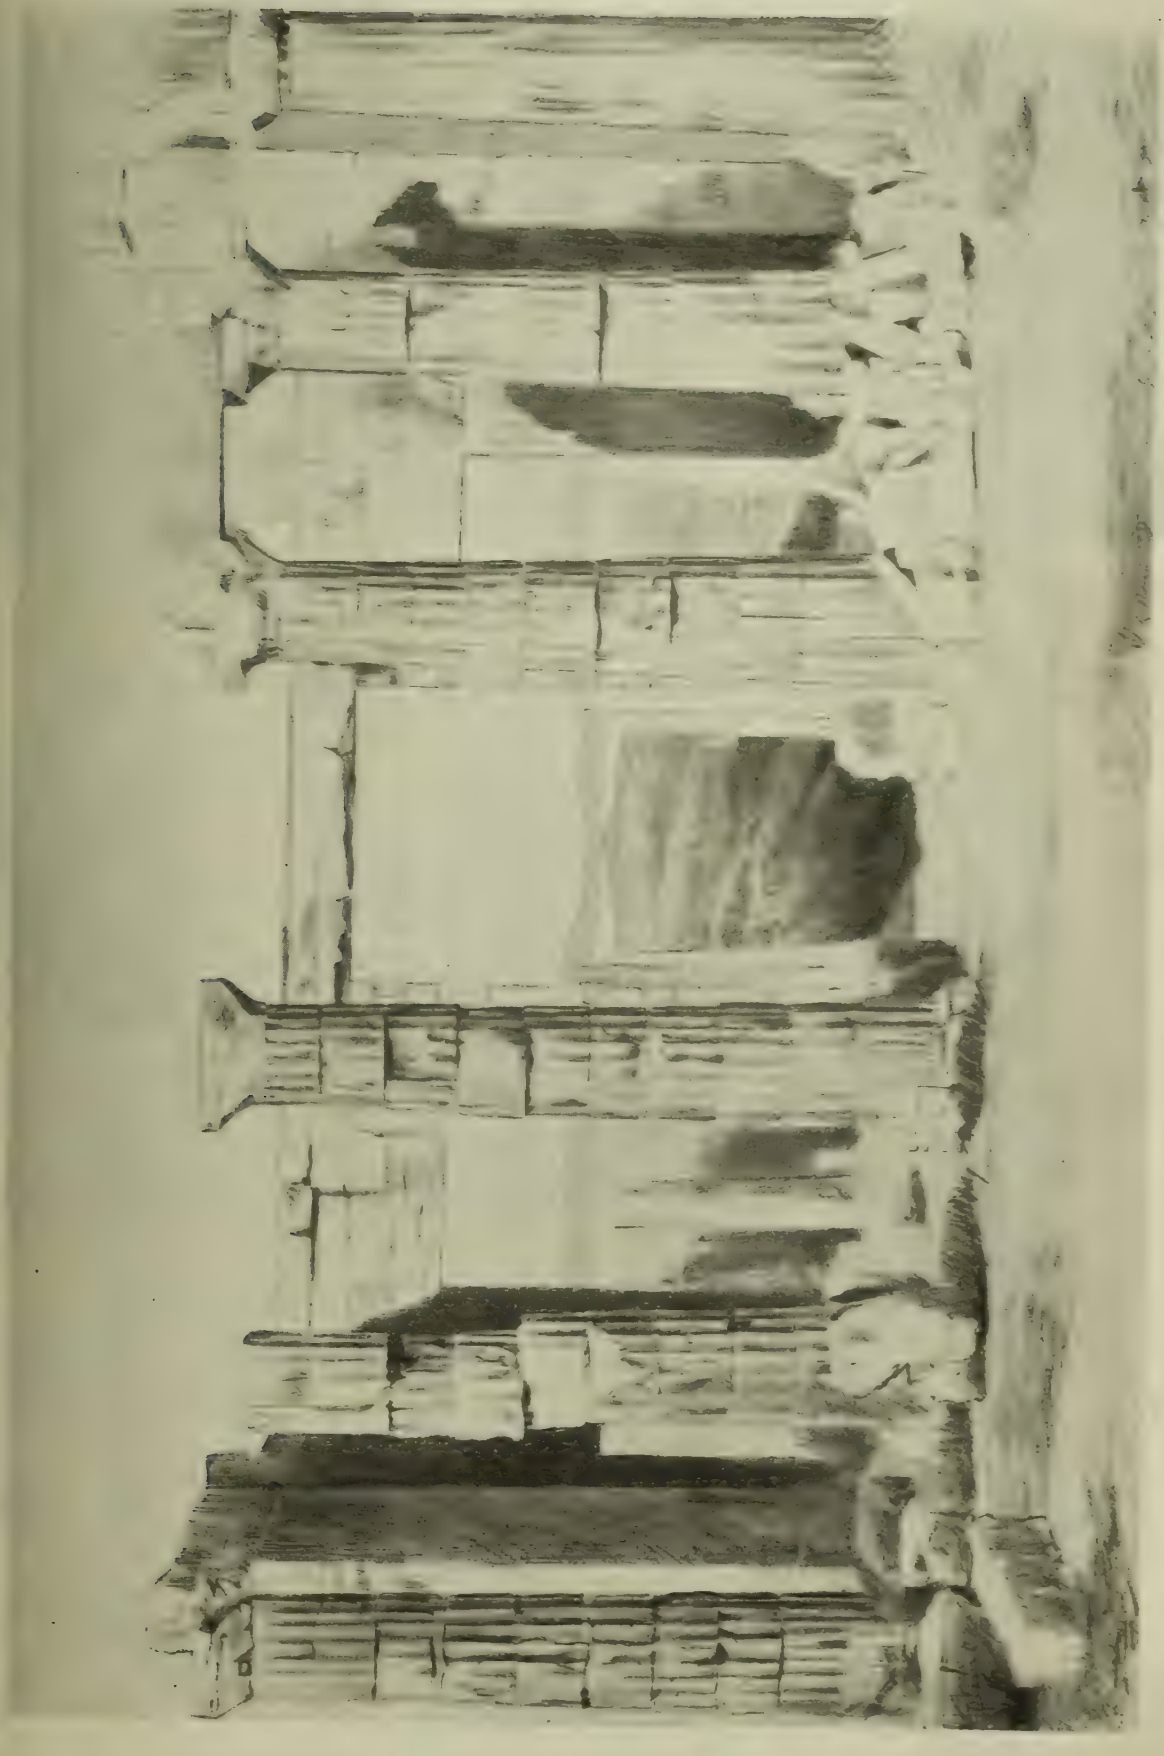
Of the statues and fragments which belonged to the pediments only about half seem to have been actually removed from their places on the building, but those so removed were the most complete.

Michaelis thought that the slabs of the "were chiefly collected from the ground a the temple or found among the houses," must be too favourable an estimate; ten are given in the lists as from "situation ascertained." Among those assigned t East end, however, are two (halves of the central slab) which for a long time had b a boundary wall and subject to injury. architectural fragments, including the c of a column and the antefix from the would have been picked out of the hea fallen stones. On the other hand, we agree with the conclusion of the fair ac given by Michaelis: "The statues o pediments were removed without neces injuring the architecture; the metopes, ever, could only be detached after destr the cornice above them—a proceeding dese the deepest censure." Even this, hov appears to have been done on the suppo that it was for the best. Hunt, writing in speaks of the metopes as "snatched impending ruin and secured to the arts.

The casts which were moulded of the w frieze of the Parthenon, the sculptures c Theseum and of other works, are of value. Now that the sculptures left in have suffered so much further damage casts, 125 years old, have become in senses more original than the originals.

Some things were given to Lord Elgin. reliefs now in the Museum were amongst Hunt described them as "The fountain i courtyard of our Consul Logotheti's h decorated with a bas-relief of Bacch which he presented to his Lordship as w a Quadriga in bas-relief with a Victory hov over the charioteer."*

Restored drawings of the eastern me made by Feodor are very valuable, as must record traces which have since disapp The subjects were properly interprete "Battles of the Gods and Giants." I Centaur series, Hunt identified a Greek w with a helmet in the last panel as Peri and this is not unlikely, although it cann proved. The indications of colouring noticed; a drawing in the Museum sho ornament on the band beneath the trig and stones with traces of painting were b away. It was remarked that "gilded l ornaments" were once attached to the tures.

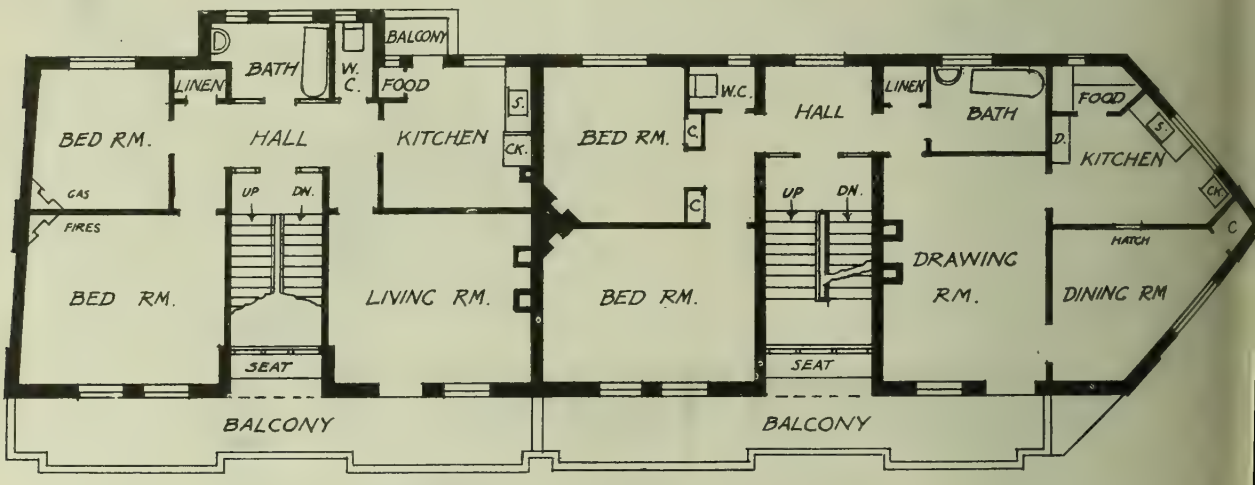


(To be continued.)

St. Bartholomew's Hospital.

The appeal of St. Bartholomew's H for £200,000 which is needed to make str extensions to the hospital and to bri ward and operating theatre facilities modern requirements, will be launched next few days, says the *Times*. The at first is to be less a public than a p one, directed, in particular, to the l firms in the City. The proposed surgica of five floors, with an operating theatre floor, will be linked to an existing block. all the patients in the old block can b ferred to the new to allow the old bloc brought up to date and its accomm increased by the addition of anothe The present surgical block will, in its dealt with and become a special dep with its own operating theatres, while block, at present used for medical w be available for other purposes. Thi outline of the complete scheme, but the appeal is only for the sum necessary struct the new block upon part of th Christ's Hospital and increase the accommodation in Queen Mary's H Nurses.

---



* Some years ago I pointed out in *The* that the "fountain" must be the same re is described in some notes on Athens in the B of the Museum as a fountain or cistern whi short inscription. I do not doubt that called a votive relief (2154) at the Museum, part of a water basin. It has been cut dow back and trimmed off on the face; the spo doubtless original.

BOOK REVIEWS

Civil Engineering Specifications and Quantities. By G. S. Coleman, D.Sc., A.M.Inst.C.E., and G. M. HOOD, B.Sc. (London: Longmans, Green & Co.) 10s. 6d. net.

A great many engineers have been trained, more or less completely in shop practice and drawing-office routine, but very seldom can a pupil see inside the estimating or costing office, and, as a consequence, he possesses little, if any, idea of costs. Many draughtsmen have but a faint idea of the actual costs incurred in the production of drawings, and draughtsmen frequently have but little idea of the cash value of the articles produced from their drawings. Even now many draughtsmen have only a slight knowledge of how a job is priced and put in hand in the shops. Such knowledge is strictly preserved in the estimating department as a "state secret," and except for the chosen few, there is no avenue open to the ordinary pupil to learn these mysteries.

The Institution of Civil Engineers has always required from a candidate for admission a knowledge of specifications, and to meet this demand certain schools of engineering provide courses of instruction in their ordinary engineering courses. The City and Guilds Institute, now merged in the Imperial College, amongst others, require their students to satisfy their examiners that they know the principles underlying the matter of costing, &c. It is somewhat difficult to mention the names of suitable text books dealing with this subject, but the authors of the book before us have essayed the writing of such a book, which is a very difficult task. That the difficulty is great is obvious to everyone who has had to grapple with the problem in actual practice. Let us consider the problem. A machine has been designed, let us say, to meet a definite duty, but before anything can be done the question, "What will it cost to make?" must be answered. When the answer is forthcoming, then follows the all-important question, "What price is it possible to obtain for the machine?" With these two riddles solved, then follows the question, "Will it pay to make these machines?" If it is too costly to make, then the design must be re examined and any modifications possible in design that will reduce the cost of manufacture without loss of efficiency must be explored by the drawing-office staff. This appears possibly a simple problem—it is in some cases—but the time required for the majority of shop operations is very difficult to estimate. Some shops are full of lathes and short of planers, shapers and milling machines; others are well equipped with all types; again, some shops have many automatics. The cost of producing the same design in each of these would differ very materially, hence no hard and fast rules can be laid down in the item of time, and the expert estimator would have to make a study of the equipment of each shop with which he may be employed. But time is only one factor; of equal importance is the material employed. In different localities the cost of the materials must differ, as also the cost of fuel and labour. Another factor is that of rates and taxes.

Turning to civil engineering problems that are considered by the authors, other difficulties have to be considered, risks estimated, before one can arrive at a probable cost of the undertaking. There is, however, another unknown field to many engineers in the very important sections, "specifications," "tenders," and "conditions of contracts." How few can decisively decide the true legal value of a phrase and support his opinion by quoting an authority? Frequently there are three parties to a civil engineering undertaking—the contractor, the engineer, and the client for whom the work is being executed.

This preamble shows the important field that should be covered by such a work as that before us. Obviously, it needs a versatile writer or writers, with wide experience, gained in actual practice, if the results are to cover the field satisfactorily. The book comprises twenty-five chapters and five appendices, and a large portion is devoted to the drawing up of specifications, taking out quantities, arbitration, &c. Two of the appendices give lists of legal authorities, English and American.

After reading the book, we can cordially commend it to our readers, for an immense amount of information has been put together, dealing with a very wide range of subjects. In a new edition some editing would increase its value. For instance, dealing with testing tars, asphalts, &c., on page 117, we read, "To determine the ash, a suitable quantity of ash is slowly carbonised in an open platinum dish, and what is left is burnt until all carbon is consumed." It appears, therefore, that to determine the amount of ash, a suitable quantity of ash is to be carbonised and the residue burnt until all the carbon is got rid of! By definition ash is an incombustible residue, yet the authors suggest that ash, itself incombustible, may be carbonised! The next sentence is curious reading also: "In finding the water content it is merely necessary to find the difference of weight due to evaporating off this *form of moisture*." The italics are ours. After all chemical analysis is a very simple matter

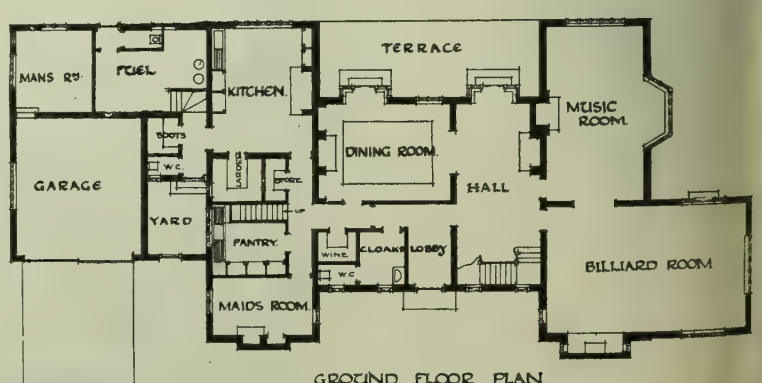
A Short History of Italian Art. By ADOLF VENTURI; translated by EDWARD HUTTON. (Macmillan & Co.) 10s. 6d. net.

A casual glance through the pages of this book would reveal the fact that it is a fine and forceful English rendering of an Italian's supercriticism of Italian Art in its manifold phases from the beginnings of Christian Art to the Renaissance and post-Renaissance. In spite of its title, it is anything but a short history, and it is doubtful whether, however closely printed and profusely illustrated, more information and reasoned criticism could possibly be contained in 350 octavo pages. The illustrations, at a rough estimate, amount to about 250 items of architecture, sculpture and paintings, interspersed either singly amongst the text or printed two to the page—barely two or three are full-page pictures. Full justice cannot be done to Milan Cathedral, the Doges' Palace, or Saint Mark's at Venice, or any great masterpiece in painting or sculpture in a picture measuring $3\frac{1}{2}$ in. by $2\frac{1}{2}$ in. or less. But at least the illustrations are well chosen and quite happily placed in apposition to the text; and if we can accept them as mere thumb-nail memoranda all objection vanishes.

The book is readable from start to finish, cannot fail to act as a mental stimulus to any possessing an interest in Italian art. author, to cite but a single instance, asc to the epic level in his vivid description of great pulpits of Pisa, Pistoia, and Sienna, their marvellous bas-reliefs of the Crucifixion, Massacre of the Innocents, the Condemned, other Bible stories. As a piece of word-paint we have rarely met with anything finer Adolf Venturi's vivid description of that pic by Botticelli, "The Outcast," in the Parava Collection at Rome, with its one deso agonised woman, weeping before the son Brunelleschi-like porch.

A book of fine thought, it is not a "Gu book" in the usual sense of the term, but tourist in Italy would be amply repaid for trouble of carrying it as a super-guide on tour. The exhaustive index would overcome tourist's objection that the subject matte divided into "centuries" of art instea "districts" as in the guide-book proper.

Pictorial House Modelling. By EDWARD HOBBS. (London: Crosby Lockwood Son, E.C.4.) Price 6s. net.



The modelling of small buildings i peculiarly fascinating pursuit and to practising architect some knowledge of to make the simpler forms of model hous of considerable practical value, as such mo frequently enable clients to appreciate appearance and suitability of a prop building in a manner impossible of attainm by the ordinary drawings. In addition architectural student is enabled by the ai easily-constructed models, clearly to grasp significance of various forms of construc and to study the recognised orders of a tecture. Mr. Hobbs's book, which is a comp guide to this useful and fascinating art, cont no fewer than 128 illustrations of finished mo and of methods employed in their construc

UIDING AND GUARDING THE CITY"

TOWN PLANNING AT ABERDEEN.

Lord Provost of Aberdeen took the on Thursday when, at the invitation of berdeen City Council, Mr. G. Topham t, F.R.S.E., F.R.I.B.A., F.G.S., Architect to the London County Coun- elivered a lecture on town planning, ding and Guarding the City." Opening cture, Mr. Forrest said the growth of wn population of Great Britain was a outcome of the introduction of the engine and its application to industry. was an ever-increasing demand for , and the workers on the land were ed to the towns. Thus it was that a uous stream of workers and their s were drawn from the country to the Their coming soon created a serious g shortage. Overcrowding took place, especially in the poorer quarters. New of all sorts, kinds and descriptions erected. All questions of health, suit- and amenity were to a great extent arded. It was thus that the slums came eing. The authorities soon began to that these slums were a menace, not o the health of their inhabitants, but o that of the whole community. The tion of this danger led ultimately to assing of the various Public Health Such things as widths of streets, s of buildings, yards and gardens, open and parks were now considered of great ance. Moreover, the coming of the car had revealed very marked defects planning of most cities. It was now d, said the lecturer, that wide streets ssential in the business areas, and also ffic routes to facilitate entrance to and om the city.

were therefore being forced to face the n of the proper planning of our cities. formation could only be carried out fort persistently directed towards a e end, and if those in authority had od will of the citizens and the assur- f their readiness to co-operate in the g about of the desired changes. At ginning of the nineteenth century as piece of street planning was carried out rdeen as was to be found in any city eat Britain. It was at a time when considered that something should be o facilitate the extension of the city. ty appeared to be as much hemmed in surrounded by walls. And even more whereas walls could be removed, the l barriers seemed to be such as could overcome. But the great engineering bridging the Denburn solved the diffi- As a result of this work and the con- n of Union-street and also King-street en was in a better position than she se would have been to provide for the and their families who were then be- to be attracted to the town by in- This provision for extension had ren- it to a great extent unnecessary to mass of people into such a small area e conditions of life under which they have to live would be a menace to the of the whole city. The formation of wo streets was a wonderful piece of planning, an outstanding instance of ding of this great city. There was ng audacious about planning a street wide in the year 1800! It was only e days of motor traffic that streets of dth were really considered necessary. great improvements were carried out rily. But we were now compelled by wn-Planning Act to plan for the ex- of our city beyond the present built- ts. The Act did not, except in special s, apply to the portions already de- It dealt with land which was in f development, or appeared likely to for building purposes.

der to explain more clearly how the lied the lecturer gave particulars as to eme which was being worked out in the south-east corner of London. This one area contains over 7,000 acres of land, and its present condition was largely that of an agricultural district. The development was principally of a suburban type with a tendency towards rural characteristics. The new roads specially provided for in the town-planning scheme were those considered necessary for the purpose of main traffic routes Other roads would be planned as and when the particular portions of the area were to be developed for building purposes. Owners of land would, it was anticipated, prepare their own schemes of development. Under the town-planning powers it would be possible to insure that such development fitted in with the development of adjoining estates. The London County Council would approve the building lines and decide the density of houses to the acre, all with the object of securing the best development considering the interests of the community as a whole. Provision was also made for ample open spaces, bearing in mind the needs of the whole of London. At the present moment there was a great dearth of playing fields, and that had been borne in mind in dealing with this particular area. Where land was taken for public open spaces, the fair market price would, of course, be paid for it. Where land was reserved for private open spaces the owners would be compensated for any loss they might sustain as a result of such restriction. The needs of commerce and industry had also been considered. It might be that the portions allocated to these purposes would not develop as indicated on the plan. But the scheme was sufficiently elastic to permit of its revision to meet conditions at present unforeseen. The object of the scheme was not to hamper development but to ensure that it should be along the best lines. The key notes were efficiency and elasticity, but the one must not be divorced from the other.

In most cases the individual owner would benefit. Good planning was always good business. Under the Act, if the community harmed the individual, the community would compensate him. In the past, when the individual injured the community, the community suffered loss. Paris with its wide boulevards appealed to all as a city of fine vistas and spaciousness of lay-out. So fully and thoroughly did these conditions obtain throughout the whole of the central area that we unconsciously assumed that they had always obtained. The facts, however, were quite different. The majority of the fine boulevards in Paris were the result of re-development on a pre-determined plan. The initiation of this redevelopment dated back to 1793, when a Commission of Architects prepared a plan of suggested new streets. Other Continental cities had also constructed beautiful wide streets. Brussels was noted for its boulevards, and Antwerp also had a number of excellent tree-flanked roads of a similar character. Although we could rightly claim that Great Britain had led the way in town planning, we had left it to our Continental neighbours to develop the ideas much more thoroughly than we had. But the subject was now again being taken up seriously. It was not only the novelty of many foreign cities, but their attractiveness which drew great crowds of visitors. We had buildings which in their own way were just as beautiful and just as attractive as any to be found on the Continent. But how badly we placed them! The lecturer instanced the Mareschal College in Aberdeen. We all knew, he said, that it was probably the most beautiful granite building to be found the world over. But it was nothing like so well known as much less beautiful buildings in Continental cities. There was nothing after all very remarkable about the buildings in the Grande Place at Courtrai, in Belgium, for example, but how finely they were grouped! The lecturer said that during a recent tour of the principal cities of the United States he appreciated that the Americans had perhaps something even better to teach us as regards the improvement of our cities. Like us they had made mistakes in the past, but now they were trying to remedy them. They sought to combine attractiveness with efficiency. Washington, of course, was an outstanding example. Washington was in every way worthy of its position as the Capital City of the States. The streets, the buildings, everything about the place made the visitor realise that the city was designed to create a sense of both beauty and dignity. Chicago was a city of Continental importance. It was situated in probably the greatest producing region of the world, and the authorities were now beginning to plan for the future. Their plan included the creation of a great park and lake-side drives to flank the business centre of the city. But more than that. Flanking that great park was an entirely new street—probably one of the finest in the world. It was known as Michigan-avenue, and was about 130 feet in width. For half its length it consisted of two levels of roadway. The upper level was for motor-cars and the lower level for heavier traffic. Three other double-deck streets connected with Michigan-avenue had been constructed around the central congested area. The rateable value of the property fronting Michigan-avenue had been increased tenfold. A third American city in which great changes were being carried out, but with the sole object of making it more attractive, was Philadelphia. The lecturer did not suggest that anything like such drastic changes were necessary in Aberdeen. He was merely stating what was being done in these different cities to illustrate what he meant when he referred to guiding the city. But he had to do more than guide future development. It was also important that we should guard that which we already possessed. There was no law in force at the present time to prevent the erection of factories right in the heart of a built-up residential neighbourhood. As things were at present a man could buy a site right in the heart of such a neighbourhood and on it erect a factory which at once detracted seriously from the value of the surrounding property and compelled the occupiers to move elsewhere. The lecturer said American zoning laws were definitely framed with the object of preventing selfish people from injuring their neighbours. As an instance, the lecturer took the question of high buildings. Very high buildings, he said, were still permitted, but definite restrictions were now imposed in order to preserve to some extent the light and air and general amenity of the buildings and their occupants.

Town-planning law in this country had been adopted with a view to accomplishing a similar result. It was important that Aberdeen should be guarded against the erection of buildings which by their appearance destroyed the artistic harmony of the surrounding buildings. Old Aberdeen certainly called for special consideration. We should most certainly guard it if at all possible from anything which would detract from its character. At least every new building erected should be in harmony with its surroundings and make a definite contribution to the amenities of the old city.

In conclusion, the lecturer said Aberdeen was a city of which we might well be proud. That did not mean, of course, that there was no room for improvement. But if we were to improve the city we must first of all definitely decide what the improvements were to be. The scheme should be bold enough and broad enough to appeal to every citizen. If it should be objected that the carrying out of such a scheme would be prohibitive on the ground of cost, the lecturer would remind them that—town plan or no town plan—building would proceed on the outskirts of the city and rebuilding would continue to take place in the central area. The existence of a definite scheme of improvement would ensure to the community that the right building should be built in the right place.

THE SURVEYORS' INSTITUTION

ANNUAL DINNER.

THE annual dinner of this Institution was held on Tuesday at the Connaught Rooms, when a large company assembled under the Presidency of Mr. Dendy Watney. Amongst those present were the Rt. Hon. Neville Chamberlain, M.P., the Rt. Hon. Viscount Chelmsford, G.C.S.I., G.C.M.G., Sir John Oakley, the Rt. Hon. Lord Hanworth, the Hon. Mr. Justice Tomlin, Sir Francis Floud, K.C.B., the Rt. Hon. Lord Bledisloe, K.B.E., Sir Sydney Chapman, K.C.B., C.B.E., Sir Percy Thompson, K.B.E., C.B., Sir John Lamb, K.C.B., Sir Lynden Macassey, K.B.E., K.C., Sir Ernest Gowers, K.B.E., C.B., Messrs. W. Edgar Horne, J. M. Gatti, Leslie Vigers, C. B. Fisher, Lieut.-Col. F. E. Fremantle, O.B.E., M.P., Messrs. E. H. Leeder, John Willmot, J. M. Clark, P. G. Mackinnon, E. S. Cox, A. Macmorran, C. H. Bedells, J. Steel, C. Gerald Eve, A. A. Hudson, K.C., Montagu H. Cox, G. Turville Brown, P. F. Tuckett, H. C. Webster, E. M. Konstam, C.B.E., K.C., E. R. Forber, C.B., C.B.E., Sir Joseph Burn, K.B.E., Mr. S. J. Chesterton, M.B.E., Messrs. E. E. Finch, M.I.C.E., G. Topham Forrest, F.R.I.B.A., A. Norman Garrard (Hon. Secretary), A. Goddard, C.B.E. (Secretary), C. H. Gott, Lieut.-Col. J. Grimwood, C.B., D.S.O., Messrs. S. Vyvian Hicks, Frank Hunt, C.V.O., S. A. Kelly, Cuthbert Lake, Walter Lawrance, Ian MacAlister, M.A., Sydney Mager, C.B.E., H. B. Napier.

After the PRESIDENT had proposed the loyal toasts, MR. C. HERBERT BEDELLS proposed the toast of "The Public Services." He said that it was Lord Curzon who had said that there was no country in the world that had public men with the right instincts and ideals who had a greater idea of public politics than England. Some people might think of the L.C.C. as being a body which disposed weekly of a huge agenda filled with references to the London Building Acts, while others might think of the Council as being merely promulgators of by-laws. He thought that they should think of the London County Council as being a respectable body that considered health, building, transport and a host of other important matters. It had a heart as well as a head. The record of every successive year brought fresh responsibility. Town planning was one, a new one. But the record of the past gave confidence. The L.C.C. was worthy of Lord Rosebery's saying of them: "They are untiring in the cause of good." Regarding the Board of Agriculture, it did its best to secure the well-being of all those who worked on the land. He had pleasure in coupling with the toast the names of Mr. John M. Gatti, whose appointment to the Chairmanship of the London County Council came as a very just reward for his services, and Sir Francis Floud, K.C.B., Secretary of the Ministry of Agriculture and Fisheries.

MR. JOHN M. GATTI, responding, remarked that he had experienced for only four hours the responsibility indicated by the proposer. The latter had quoted the words of Lord Rosebery, but although people might think the L.C.C untiring, they also at times thought them tiresome. They had spent long hours drawing up rules for the benefit of the Surveyors' Institution! The L.C.C. were landlords themselves on a large scale, their rent roll being in the neighbourhood of some one-and-a-half millions a year, and they provided at all stages work for members of the Institution. But the L.C.C. were also ratepayers to the tune of one-and-a-quarter millions per annum, so that they returned a good share to the pockets of those from whom it came. In conclusion, he would like to express the pleasure that he felt in making his first public appearance in his new office in the company of the Institution.

SIR FRANCIS FLOUD, K.C.B., also replying to the toast, said that he welcomed the opportunity of expressing thanks on behalf of the other public services and also of assuring them that those public services offered the finest career for a man. Nobody could claim better than the Surveyors' Institution that they had done well in the cause of public service. It was a great advantage to have such an Institution as theirs, which insisted on a high standard in those that practised it. There was one thing in these days of national depression on which they could pride themselves: we were the best-mapped country in the world.

THE RT. HON. NEVILLE CHAMBERLAIN, M.P., Minister of Health, proposing the health of the Surveyors' Institution, said that he was very happy to have the chance of proposing the health of the Institution, with its 6,000 members, and of acknowledging the help that it had given to his department. He would also like to take the opportunity of reminding them how much the Surveyors' Institution owed to the Ministry of Health. A great activity of theirs was town planning, though owing to the speed with which the country was developing it was hard to keep pace with it. Huge sums had been expended because large buildings had been carelessly erected upon sites absolutely necessary for roads, while buildings were being erected which were harmful to amenities. Dealing with slum clearance, he found that the Act of 1925 was a consolidating Act, and its object was not to bring in new conditions but to codify the existing conditions. His point was that if one were going to scrap section 46, one would have to find a substitute and avoid retrogression, or one would go back to 1900 and stop all slum clearance. He would refer to one satisfactory point: we had now a committee set up to consider the composite planning of Greater London. People might boast of having, say, the third largest city in England, but where, asked the speaker, was the point of accumulating a vast number of people if in the process they lost their own souls? It was better to see that the existing population was happy. There was a critical point in the aggregation of a great number of people, and once they passed that point they were bound to involve themselves in problems of housing, transport and finance which might eventually throttle the town itself if not checked in time. Regarding the preservation of amenities, there were the squares which were one of the glories of London. Everyone would agree that the squares were historical heirlooms, and everyone should help in preserving these green pleasure spots in the drab surroundings of London. Speaking of new legislation, Mr. Chamberlain said that in the old days it was the custom to set up the Bill in secret and then to spring it on the House of Commons. Now they consulted the Institution that dealt with the matters in hand, and the balance of advantage was on the side of the new proceeding. The Surveyors' Institution in particular was performing the most valuable public function, and therefore he would ask to propose the health of the Institution, coupled with the name of Mr. Dendy Watney.

THE PRESIDENT, responding, said he would like to thank Mr. Chamberlain for his kindness in acknowledging the help the Surveyors' Institution had given. The fact that the Institution could give without prejudice honest advice would be grateful to all. It was not for them to determine questions of policy, but they could help in carrying out the proposals. Surveyors, the President continued, required a high standard of public knowledge, but also a high standard of public conscience. The faculties of law and medicine excepted, the Surveyors' Institution was the first to institute examination as a test of efficiency. The Institution had been founded 60 years ago, and they as successors could truly claim that the foundation and the hopes of the founders had worthily been carried on.

MR. JAMES STEEL then proposed the health of "The Guests," to which the RT. HON. VISCOUNT CHELMSFORD briefly replied, proceedings then terminating.

LEASEHOLD REFORM.

A MEMORANDUM on Leasehold Enfr
ment, issued by the Council in 19
before Monday evening's meeting
Institution as the basis of discussi
Mr. Dendy Watney, who presided, s
when opening the proceedings, that
cussion should be confined to four poi
the renewing of leases, (2) goodwill,
provements, and (4) dilapidations.

Sir Philip Pilditch, M.P., said the
ment Bill dealing with leases was
before Easter. Its provisions were no
in detail but the terms of the King's
had been, "Proposals will be m
amendment of the law relating to l
premises so as to secure an outgoing
compensation for the loss of his good
unexhausted improvements"; and it l
forecast that the Bill would deal w
freeholder's power to charge an ex
rent where the tenant had made a g
and with the power of the landlord t
the cost of putting premises into repai
end of a lease even if they were to b
down. He did not think anyone wo
agree with the last point in dealing wi
pidations. But legislation should not
as to discourage the erection and rec
tion of premises. If there was to be any
the nature of a right on the part of a te
make improvements which subsequen
landlord would have to pay for, a
should be set up with power to decide
such improvements should be made.
sation for the improvement should be
by the rental value to the incoming
The landlord should not be required
compensation for an improvement whe
improvement had been made in pursu
a contract entered into for valuable co
tion, where the tenant had been of
renewal on reasonable terms and had
it, where the premises were to be dem
or used for a different purpose, or wh
tenant had entered into an agreement
make the improvement.

Mr. Gerald Eve said that goodw
renewals were interdependent, and co
tion should not be payable to a tena
declined to renew at a fair rent.

Mr. Frank W. Hunt said it was n
for the freeholder to seek to obtain
of money which might comply with th
covenant to deliver up in a certain
repair, but in fact never meant any los
the lessor had had to suffer. Anothe
was that there was a natural feeling
ship on the part of a lessee when h
a considerable sum of money which i
the property and got nothing for t
provement when the lease expired.
lessee did not make an improvemen
he thought it would be worth his wh
conferring a right to compensation
provements under existing leases woul
a great number of people and possibl
tenancies for investment.

Mr. S. Vyvian Hicks said it was
proposed that the lessee should be
to enfranchise but the landlord should
powered to buy out a lessee in certain
stances. There was danger of such
tion being used to favour a large and
leaseholder in his endeavours to get
mises of a smaller neighbour.

Mr. J. G. Elsworthy said that g
as to dilapidations were frequently
fide; a speculator acquired the prop
used dilapidations as a pretext for e
from a lessee. Two factors had
about the great increase of rent tha
were called on to pay at renewal:
the tremendous rise in the value of
since the war, the other was the
shop's ability to pay a higher rent
man in a smaller way of business.
localities there was a third factor
of user. The same building would
higher rent when let as offices than
as an apartment house.

THE LONDON BUILDING ACTS AND THEIR APPLICATION.—IX

By H. V. MILNES EMERSON, A.R.I.B.A.

ION 42.—Open spaces to be provided certain buildings not on the public way.

section relates to dwelling-houses for the g class, not abutting upon a street :—

The deposit of plans, &c., to the Council re commencing to erect.

) In any case where the Council are satisfy taking all the circumstances of the case consideration, that there will not be provided about such dwelling-house a sufficient space or spaces for the admission of light air thereto, it shall be lawful for the ncil at any time before the expiration of month from the delivery of the said plan lans by order to refuse to sanction such or plans or to sanction the same subject ch conditions as they may by such order cribe. Provided always that nothing in subsection shall authorise the Council to e to sanction such plan or plans or to pre- e any conditions when sanctioning the e in any case where the open space or es for the admission of light and air osed to be provided about such dwelling- e is or are equivalent to the open space or es which would have been provided about dwelling-house under the provisions of Act in case the same had been erected the commencement of this Act abutting a street or way formed or laid out before commencement of this Act.

—A considerable number of blocks of s' dwellings erected prior to this Act did e adequate ventilation to the rooms nor circulation of air around the buildings. found impossible to prescribe require- for all cases, so this section was framed the Council power to withhold sanction erection of this class of property unless te spaces for light and ventilation were d.

remaining subsections relate to approval Council and appeal to the Tribunal of

on 43.—Saving for certain domestic gs on old sites.

n any person intends to erect a domestic g (not being a dwelling-house to be ed or adapted to be inhabited by persons working class) abutting upon a street on e of domestic buildings existing at the ncement of this Act or on a site vacant at mmencement of this Act but which has ccupied by a domestic building at any ithin seven years previous to the com- ent of this Act, the following provisions ve effect :—

provisions are briefly :—

Plans showing the extent of the pre- ly existing domestic building in its al parts certified by the District Surveyor. ded domestic building can then be erected o occupy no more land than the pre- ly existing domestic building as so ied.

If it is proposed to deviate the intended stic building in any respect from the ied plans the Council can give consent certain conditions.

) Appeal to Tribunal of Appeal.

—It has been held that the plans to be must be the plans and sections of its floors to show what the old building d any deviation in area or outline must the sanction of the Council (Paynter on, 1892, 2 Q.B. 31).

lso case of L.C.C. *v.* Patman & Fother- under Section 13, in which it was held ground plan showing extent of building ecourt was all that was required to be .

on 44.—Laying out of new streets on area.

section deals with application to the Council to form or lay out new streets on a cleared area.

Section 45.—Courts within a building.

Where a court wholly or in part open at the top but enclosed on every side and constructed or used for admitting light or air to a domestic building is constructed in connection with such domestic building and the depth of such court from the eaves or top of the parapet to the ceiling of the ground story exceeds the length or breadth of such court adequate provision for the ventilation of such court shall be made and maintained by the owner of the building by means of a communication between the lower end of the court and the outer air.

No habitable room not having a window directly opening into the external air otherwise than into a court enclosed on every side shall be constructed in any building unless the width of such court measured from such window to the opposite wall shall be equal to half the height measured from the cill of such window to the eaves or top of the parapet of the opposite wall.

Provided that a court of which the greater dimension does not exceed twice the less dimension shall be held to comply with this section if a court of the same area but square in shape would comply therewith.

No habitable room above the level of the ground story not having a window directly opening into the external air otherwise than into a court open on one side, the depth whereof measured from the open side exceeds twice the width, shall be constructed in any building unless every window of such room be placed not nearer to the opposite wall of such court or to any other building than one-half the height of the top of such wall or building above the level of the cill of such window.

Note.—The ventilation to an internal court can be by means of an archway or ducts between the ground and first floor, or other means as agreed with the District Surveyor or Council.

A court enclosed on all sides can have windows to habitable rooms (without windows to external walls of building) as provided. For this purpose a court, say, 20 ft. by 10 ft. could be taken as a square court (about 14 ft. 2 in.) and the height of the wall opposite must not exceed above the ground floor cill level twice the breadth of such court (about 28 ft. 4 in.) to the eaves or top of the parapet. If the parapet to a flat roof is omitted and a guard rail fixed, this would help where space is limited as a parapet 2 ft. high means 1 ft. extra width of square court.

Courts enclosed on three sides. If the length of an open court exceeds twice the width of the court the windows of habitable rooms above the ground floor (without windows to external walls of building) in these courts (not facing the open end) must be at a distance from the opposite wall of at least one-half of the height of such opposite wall measured from the cill of the window. If the width of the court is, say, 10 ft., then the wall opposite the first floor window above cill level must not exceed 20 ft. If the court is, say, 10 ft. wide and not exceeding 20 ft. long with the end open, then this restriction does not apply.

THE PRESERVATION OF ST. PAUL'S

A MEETING of the Representative Committee for the Preservation of St. Paul's Cathedral was held this week at the Deanery, the Dean of St. Paul's presiding. The fourth report of the Works Sub-Committee was received, and from this we take the following extracts :—

A detailed survey of those portions of the choir piers which could not be examined before the removal of the organ, has now been made. As was expected, the general condition of the ashlar masonry compares unfavourably with that of the other main piers; this is particularly so in the case of the north choir pier, largely to be attributed to the effects of the fire which occurred in the vestry during the building of the organ about 1705.

The injection with cement or cementation of all the eight main piers in the crypt, from the foundations to the church floor, supporting the dome structure, is nearing completion. A number of holes additional to those originally bored have been drilled and injected in order to leave no doubt as to the thoroughness of the work. When the two piers of the north transept which had been the subjects of previous grouting by the Commission of Architects and Engineers in 1923 and 1924 were injected, most satisfactory evidence was obtained of the beneficial effects of that grouting; the core of these piers was found to be much more compact and united than that of the piers not previously treated, and the small quantity of cement that could be injected showed that the cracks and voids had been almost entirely filled. In addition to this cementation, a large number of reinforcing bars have been cemented into the grouting holes in the above-mentioned piers in the crypt.

The consolidation of the main piers in the crypt, supporting the dome structure, being so far advanced, it is now possible to extend the work to those piers above the level of the church floor. During the operations of cementation and reinforcement in the crypt, the piers were strutted as a precaution, in the manner previously reported, and the same procedure will be adopted for the work above the level of the church floor. To aid in this procedure steel structures to stand between the piers, reaching to the level of the springing of the great arches, have been ordered, but delay in the delivery of the materials is being experienced as a consequence of the recent dispute in the coal industry. These structures are designed to form the basis of the strutting of the piers, and to reduce the employment of wood to a minimum, but they will also afford an opportunity of keeping the whole surface of all the piers under continuous observation during the execution of the work. Mention was made in the previous report of the ties inserted between the piers and bastions during the original construction, the majority of which were found to be broken. The work of replacing these by a system of stronger ties has begun.

A great deal of consideration has been given to various schemes for the reinforcement of the dome structure at the platform level immediately above the great arches. A number of methods have been considered, and the model, the construction of which was mentioned in the last report, has been found very helpful in the examination of the problem, the object being to provide for the transference of a greater proportion of the weight of the upper structure to the bastions in the eventuality of settlement taking place in any of the piers, in conjunction with the bracing and encircling of the drums.

The seventh complete series of levelling observations from the datum in the General Post Office Courtyard to all the plugs embedded in the masonry of the Cathedral, from the crypt to the Whispering Gallery, has just been concluded, the result of which is that no evidence of settlement in the foundations nor vertical movement in other portions of the dome structure is detected.

While there is no evidence of recent subsidence or movement of the dome structure as a whole, a few cases of flaking have recently been observed in the masonry of the piers above church level in addition to the slight cracks previously mentioned in this report. They are not new features, but as the history of the Cathedral shows, have been recurrent and continuous from the time it was built.

PARTY WALLS: PRACTICE AND DECISIONS

CHAPTER X.—FORM OF AWARD UNDER THE LONDON BUILDING ACT, 1894

BY J. DOUGLAS SCOTT, A.R.I.B.A.

NOTE.—*If it should be thought necessary to make the award appear more like a legal document, the unnecessary number of "Whereas," "said," "abovementioned" and such other superfluous words may be inserted without invalidating it.*

IN the matter of a party structure between the premises No. .... and No..... ..... in the County of London.

THE LONDON BUILDING ACT, 1894, PART VIII. ..... of ..... being the building owner within the meaning of this Act of the premises No. ..... having served upon ..... of ..... the adjoining owner within the meaning of this Act of the premises on the ..... side thereof, known as No. ..... a notice dated ..... of ..... intention to exercise the rights given to .....under the provisions of Part VIII of this Act of executing certain works described as follows:—

.....

.....

As the adjoining owner did not, within fourteen days after the service of this notice, express consent thereto, a difference is deemed to have arisen between the building owner and the adjoining owner.

Under the above notice the building owner appointed ..... of .....as ..... Surveyor, and the adjoining owner has appointed ..... of ..... as ..... Surveyor and these two Surveyors have selected and appointed ..... of ..... as third Surveyor in accordance with the provisions of this Act; and these three Surveyors or any two of them shall by their award settle all matters in dispute between the building and adjoining owner in respect of any work to which the notice relates.

Now, we ..... and ..... having surveyed and examined the party structure and premises and having carefully considered the matters in difference do hereby make and publish this our award as follows:—

1. The building owner, upon the signing of this award and the payment of the fees hereinafter stated, shall be at liberty forthwith to pull down and remove the existing party wall and build a new one in accordance with the plans and sections attached hereto and signed by the respective surveyors; the line of the present face of the wall on the adjoining owners' side to be the future face of the new wall.

2. The new party wall to be properly built with good sound new ..... bricks in ..... mortar mixed in the proportion of 1 of ..... to ....., of clean sharp sand with proper offsetting footings on cement concrete foundations composed of 1 of cement to ..... and with ..... damp course laid over the whole thickness of the wall. The brickwork of the new party wall to be properly toothed and bonded with the existing walls abutting against it. The new party wall to be finished on top with a ..... coping set and pointed in cement.

3. The building owner shall build chimney breasts and flues as required by the adjoining owner, properly parged and cored and form chimney openings with proper arches supported on .... in. by .... in. chimney bars and turn trimmer arches and lay ..... hearths, refix the stoves and chimney pieces removed from the former chimney openings, repairing and making good any parts damaged by such operations or supplying and fixing new, and shall carry up the flues and chimney stacks to the heights indicated, and fix on top of the chimney stacks the sound old chimney pots, or approved ..... chimney pots, properly set and flaunched in cement.

4. The building owner shall build in all timbers, joists or girders with all necessary corbels and templates, and shall make out the ends of partitions and floors to match the existing up to the new party wall, and shall refix the old skirtings or supply and fix new of similar section, made good to and mitred with the existing.

5. The building owner shall provide temporary shoots to take the water from the roof and shall provide tarpaulins or other protection to such parts of the roof and premises of the adjoining owner as will be exposed by his operations, and shall make good the roof timbers up to the new party wall and build in the ends of purlins and ridges or corbels to take the same and make good the boarding, slating, tiling and leadwork up to the new party wall, relaying the gutters with new 6 lbs. lead with 5 lbs. flashings, and redressing the lead coverings of flats with new 5 lbs. flashings and refixing or renewing any iron guttering, down pipes or soil pipes interfered with by this work and shall paint some . . . oils.

6. The building owner shall render, float and set the new party wall and chimney breasts on the adjoining owner's side, and shall make good the lathing of ceilings and partitions, and plaster, float and set same up to the new party wall making good junction with existing plastering of walls, partitions and ceilings, and shall run plaster moulded cornices to match and make good to the existing cornices.

7. The building owner shall whiten the ceilings, cornices and friezes, and paper the walls with paper, value . . . per piece, and clean and paint the work now painted with . . . coats of good oil colour, bringing forward the bare places and the new work with . . . additional coats, to the whole of the rooms, staircase and landings adjoining the new party wall, such redecoration to be executed to the reasonable satisfaction of the adjoining owner's surveyor in as good a style and manner as they are now done.

8. The building owner shall, before pulling down the party wall, efficiently screen and protect all adjacent skylights and windows of the adjoining owner's premises, and shall shore and strut the walls, floors, staircase and roof and any other parts of the adjoining owner's premises where required to maintain them in a safe condition during the execution of the work, and at its completion shall remove all such screens, shoring and strutting, and shall make good all damage caused by these operations.

9. The building owner shall, before pulling down the party wall, efficiently screen off the rooms and staircase of the adjoining owner's premises with close boarded partitions covered externally with felt and canvassed and papered internally, and shall execute such works as may be necessary to maintain access to all the rooms and the staircase and shall provide temporary stoves and flue pipes where so required, and shall shift, alter and maintain all gas, water, electric light, power and bell services and fittings affected by this work and shall reinstate them to their former positions on completion, when he shall remove all screens, partitions and temporary work and make good all parts disturbed and shall protect from injury the property of the adjoining owner or occupier during the execution of the work, and shall make good promptly any damage that may occur thereto.

10. The building owner shall pay to the adjoining owner the cost of any extra premiums of insurance charged in respect of the premises and their contents in consequence of these works.

11. The cost of the whole of the foregoing works shall be borne by the building owner, who shall also pay to the adjoining owner on the signing of this award a fair allowance in respect of the disturbance and inconvenience caused by the execution of these works which we assess at the sum of £ . . . .

11A or. The cost of rebuilding the party wall shall be borne by the building and ad owners in due proportion regard being the use that each owner makes of it account and particulars of the cost s delivered to the adjoining owner's s within one month after completion re-building. The cost is to be ascerta measurement, and valued at the fo schedule rates . . . Payment for the ad owner's proportion of the cost of rebuild party wall shall be paid to the building by the adjoining owner one month af delivery of the account.

12. The wall in question is a party w sound condition and of sufficient stren carry the loads hitherto borne upon it.

13. The building owner shall be at lib his own cost to cut into the party wall purpose of toothing and bonding, i girders, timbers, stone templates, corbe of stone steps, or for cutting out bond t loose or defective parts and shall repa make good thereafter and perform an work necessary or incidental thereto.

14. The building owner shall be at libe his own cost, after notice to and consent District Surveyor, to cut away the pro chimney breasts and flues on his side, fil the voids or defective parts with solid bri in cement properly bonded with the ad work, and shall make good all parts distu

15. The building owner shall be at lib excavate for and underpin the party wa his own side and at his own cost, such pinning to be executed in alternate sectio exceeding 4 ft. in length the full thickness wall over to the extent shown on the at plan and section with good sound ne bricks in cement mortar mixed in the pro of 1 of cement to . . . of sand, with pro setting footings on cement concrete foun composed of 1 of cement to . . . The projecting footings and concrete or other f tions and earth to be carefully cut aw removed and the new brickwork to be wedged up with sound slates in cement old work over which is to be temporarily s and supported as required. The al sections of the underpinning shall not ceeded with until the sections pre executed are set. A dampcourse to be i at the level indicated with . . . ex through the full thickness of the w pointed in cement.

16. The building owner shall be at lib his own cost, to thicken out the party his side to the extent required for his ne ing with sound brickwork in cement block bonded at intervals not exceedi apart and 1 ft. in height into the old w the wall, when repaired, thicknessed or o dealt with shall be raised to the height s the section attached, with new brickwor faced with . . . bricks and pointed adjoining owner's side.

17. The building owner shall raise the stacks of the adjoining owner's attached to this party wall to a height o above the roof of the new building wit work in cement mortar faced and po match the adjoining work and te with . . . chimney-pots or the sound may be refixed, set and flaunched in The flues to be parged and cored as t proceeds and proper precautions are to to prevent debris falling down these flu the execution of this work.

18. If the whole or any portion of t wall should be required to be taken d rebuilt under notice from the Londo Council the cost of such work, togethe work incidental thereto, shall be born building owner.

19. If it is found necessary for the of these works to go into or open up of the floors or yards of the adjoinin premises, the building owner shall days' notice to the adjoining owner an and at the expiration of that time, if shall completely screen off all or any the parts required to be used with

nd damp-proof screens and enclosures and ay the expenses of the adjoining owner for g his goods or furniture together with any expenses necessarily incurred and on com- n shall remove and clear away such rary screens and enclosures and shall make ny damage caused by these operations.

The building owner on the signing of this shall pay to the adjoining owner the sum . . which we assess as the due proportion cost of the wall for the increased use he ntends to make of the party wall beyond e he formerly enjoyed.

The building owner shall, at his own cost, te for and underpin the foundations of joining owner's building to the extent and shown on the plan and section attached , with sound new brickwork in cement , the full thickness of the walls over, with offsetting footings on cement concrete tions, cutting away the existing projecting gs and the concrete foundations and g up the new work with sound slates in t to the work over. The work to be ed from the outside in alternate sections re than 4 ft. in length so as not to inter- ith the use of the rooms adjoining this The building owner shall efficiently and strut the walls and excavations as d and shall fill in and well ram to the tions around this work and shall remove perfluous earth, debris and material from premises and shall make good the . . . up to the adjoining owner's wall and all parts disturbed to their former ion.

The building owner, on the signing of this shall pay to the adjoining owner compen- for the inconvenience and loss that he will by reason of the underpinning of his g, which we assess at the sum of £ . . . e building owner shall be liable for any e that may result to the adjoining owner's g within six months of the completion of perations and shall make same good and nsate the adjoining owner accordingly.

No action at law shall be commenced by of the parties hereto in respect of any differences that may arise out of or in tion with the execution of the before- ned works or the interpretation of this but all such further differences shall be l to the herein appointed three surveyors ir further award.

Nothing in this award shall prejudice any f light and air or other easements of the ng owner.

Having once commenced the work it shall ied on and completed with all reasonable n such a manner as will cause the least e inconvenience to the adjoining owner cupier.

The whole of these works shall be executed npleted to the reasonable satisfaction of oining owner's surveyor, who shall be access during their progress for the of inspecting that portion affected by red to in this award.

The whole cost of the foregoing works e borne and paid for by the building who shall make good promptly all whether structural, decorative or l that may be caused to the premises or y of the adjoining owner or occupier in ence of the execution of these works, ll indemnify the adjoining owner and against all claims for injury to persons erty arising out of the execution of these nd also shall from time to time as often be found necessary clear away from the g owner's premises all debris, dust and arising from the works.

The building owner shall pay the fees adjoining owner's Surveyor, which we p to the signing of this award at the £....., also the fees of the third r, which we assess at the sum of £....., and shall also undertake the proper stamping of this award and the counterpart.

Dated ..... day of .....

Witness .....

Building Owner's Surveyor.

.....

Adjoining Owner's Surveyor.

Note.—In the above award

Clauses 1–11 relate to an entire rebuilding.

Clauses 12–14 relate to alterations and additions.

Clauses 15–20 relate to underpinning, thickening and raising.

Clauses 21, 22 relate to underpinning an adjoining building within 10 ft.

Clauses 23–28 general clauses applicable to all cases.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

***May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?*—Ed.**

Measuring-up Plaster.

Sir,—Could you let me know if, when measuring-up plastering, internal angles count as well as external ?

A. E. Croft.

Septic Tank Questions.

[Reply to "Septic Tank," February 25.]

Sir,—My personal experience has been that in spite of a small additional outlay in first cost, it has been the cheaper method in the long run to employ a specialist firm for sewage disposal works. There are many proprietary "gadgets" which encourage smooth working, and some of these firms undertake periodical examinations of their plant at no extra cost, but merely to assure themselves that their apparatus is getting fair play. In this case it appears that the plant is already constructed. I have no doubt that a good firm would undertake to add to its efficiency by supplying the latest ideas. A glance through the advertisements in this journal will suggest likely firms to approach.

Pound Wise.

Dairy Farms.

Sir,—Can you tell me whether there is a reliable and up-to-date text book dealing with the planning and design of dairy farms, or whether there is any rough-and-ready key figure for estimating the cost, either by head of cattle or unit of output, or other unit ?

Plans.

Heat in Garage.

Sir,—I am proposing to run the flow-and-return pipes of a small domestic hot-water apparatus vertically up the corner of a garage, thus providing about 8 ft. of two 1¼ in. pipes. Will this be just sufficient to keep a severe frost off the radiator, assuming the car would be run in head-on with the radiator within a few feet of the pipes ?

Chilloff.

Rule of Thumb for Pricing Timber.

Sir,—Timber is generally quoted at per standard and from this price I have observed that some practical men are able quickly to arrive at the price per lineal foot for any particular scantling. I have never had the courage to admit that the calculation was beyond my powers, but should be glad if any of your readers could give any rule of thumb by which this calculation can be made in the head.

Tyro.

Non-Sweating Plastering.

Sir,—I am erecting a building, 14 in. cavity brickwork. The cavity is being filled in with Hygeian rock and the external wall will be composed of roughcast, while the interior walls are to be plastered with a non-sweating composition. It is absolutely essential that this rendering should be fairly hard, but it must not show any moisture. The building will be well ventilated from the floor level and at ceiling height. I should be glad of any information concerning this internal plastering.

J. W. Butler.

Smoky Chimneys.

Sir,—I have recently erected a house in an exposed position, and two of three chimneys smoke badly. The roof is half pitch (45 degs.), hipped all round, and the tops of chimneys are about level with the ridge. All chimneys are at the eaves, and the chimney that does not smoke is at a corner of the building. The chimney pots are plain pipes, 6 in. above the cap, which are two courses of tiles. The building is detached, on a rise, and there are no trees or other obstructions near. Could this difficulty be overcome without raising the two chimneys by 2 ft. or so ?

Chimney.

Coke Breeze Lintel.

[Reply to "C.," March 4.]

Sir,—If the breeze is thoroughly burnt, as in a destructor, it should be a product which will stand fire as well as or better than any other aggregate. More often than not, the breeze supplied contains a proportion of coke, and not only is it then open to the attacks of fire, but concrete will crack in all directions, quite apart from contact with fire. Personally, I never allow fireplace openings to be spanned with a concrete lintel of any sort, it being liable to fly whatever the aggregate, but insist on a properly turned arch, which is self supporting, even though the mortar joints may fly to dust.

Safety First.

Profit on Cottage Work.

Sir,—Would you be good enough to note that in my letter under this head, in your issue for March 4, the passage which reads, "a further 2 per cent.," should have read, "a further 2½ per cent." This figure is suggested for a firm of which the members are willing to burn a little midnight oil on the clerical work, and so keep overhead charges down to a minimum.

Advice.

Concrete Made with Sand-Lime Bricks.

[Reply to "W.," March 4.]

Sir,—I believe that if the sand-lime bricks are of a good age and thoroughly inert, there would be no danger in using them as aggregate for a *cement* concrete bed upon which granolithic might be safely laid. If they happened to be at all green, the result would doubtless be disastrous. Has your correspondent used this aggregate in the concrete mentioned with lime or cement as the matrix ?

Interested.

Damp Course.

[Reply to "S.E.," March 4.]

Sir,—A damp course is a layer of impervious material constructed to prevent the suction of damp from one side of it to the other. The usual positions are over the surface of all walls built on underground foundations, having a position where possible above the ground and below the lowest floor. Vertical damp courses occur where the floor is below the ground level, and occur to form a vertical barrier joining the horizontal damp course on the inside below floor level with the horizontal damp course outside above ground level. Damp courses occur also in chimneys above roof level, and round window openings in cavity work, &c. The usual materials are two courses slates in cement, breaking joint ; or a layer of patent bitumen sheeting, or a layer of sheet lead, or asphalt floated over in its mastic form. It is possible to insert a damp course in an old building by cutting out a course in the required position a short length at a time and building in an earthenware damp course made to the required depth. It is an expensive process, but is probably the only satisfactory method of curing the dampness in an old house where there is not already a damp course.

Thorough.

THE WEEK IN PARLIAMENT

WESTMINSTER, *Wednesday.*

Mercantile Marine Memorial.

The Mercantile Marine Memorial Bill, which enables the Imperial War Graves Commission to erect a memorial on Tower Hill to the officers and men of the Mercantile Marine who fell in the War, has been reintroduced this Session by Mr. Gosling.

A Kensington Widening.

Mr. Sandeman asked the Minister of Transport whether, seeing that in the proposed widening of Kensington High-street a private firm was surrendering about 10,000 square feet of land and acquiring about 30,000 square feet of public street, in addition to a payment from public revenues, he would make it one of the terms of this expenditure of public money that the said firm should provide a parking place for the cars of its customers, and thereby relieve the public thoroughfares.

Colonel Ashley said that the figure of 10,000 square feet given in the question was inaccurate. The correct figure was 16,270 square feet. Apart from this he understood that the agreement under which this improvement would be carried into effect would provide for the larger area of what were now two streets being kept unbuilt upon, and for the remaining area to be rearranged to form loading bays. He had not yet had an opportunity of considering the proposed agreement, but when doing so he would take into consideration Mr. Sandeman's suggestion.

Lead Glaze.

Mr. Clowes asked the Home Secretary how often a sample of the glaze was taken for testing purposes when a pottery firm changed from lead glaze to leadless or low solubility; and how many samples of glaze were taken for analysis in the years 1924, 1925, and 1926.

Sir W. Joynson-Hicks said that it was not the practice to take a sample immediately after a change, but before the change took place the inspector must be satisfied that the glaze would conform to the prescribed standard. After that, reliance was placed mainly upon systematic routine sampling. The total number of samples taken under the Regulations was: in 1924, 83; in 1925, 97; and in 1926, 84.

White Lead in Paint.

Mr. Viant asked the Home Secretary the dates of the conferences held since December 15, 1926, with representatives of the painting and decorating industry, for the purpose of arriving at agreement in connection with the circular recently issued for the regulation of the use of white lead in paint; and whether there was unanimity on the points raised in the circular.

Sir W. Joynson-Hicks said he was glad to have that opportunity of correcting a misunderstanding which had arisen in connection with the explanatory letter issued with the draft Regulations under the Lead Paint Act. The letter stated that the terms of the Regulations had been discussed at a series of conferences with the industry at which a complete agreement was arrived at. The reference there was to certain conferences which had taken place in 1922 for the purpose of determining what Regulations could be made in the event of the Geneva Convention being ratified, but the statement had apparently been taken in some quarters to imply that conferences had been held subsequently to the passing of the Act, and that the draft regulations were the outcome of a fresh agreement. That was not the case and no such implication was intended or conveyed. The sole object of the circular was to remind the industry of the previous discussions and the agreement then reached, which applied not only to external painting but also to internal painting during the interval before the prohibition was to take effect. Since the issue of the draft Regulations there had been a further meeting with representatives of the industry. This resulted, he was informed, in general agreement on the points discussed.

Rural Housing.

Mr. F. Hall asked the Minister of Health what proportion of the housing shortage of 800,000 in England and Wales, as determined by the 1919 housing survey, was in primarily rural areas.

Mr. Chamberlain said that the 800,000 referred to was, approximately, the number of houses which local authorities in England and Wales estimated in 1919 would be required during the subsequent three years to meet unsatisfied demands and replacement of houses falling below a reasonable standard. He was unable to say how many of these were in primarily rural areas, but the number in all rural districts was 150,000.

Army Housing.

Sir L. Worthington-Evans, Secretary of State for War, in presenting the Army Estimates, dealt with the housing of the Army, and said that heavy expenditure had still to be met to provide the accommodation which the Army lost when the troops ceased to be stationed in the Irish Free State. £300,000 would be spent on Catterick; £150,000 at Smallshot, and smaller sums on other accommodation for the troops. The total expenditure for works abroad were £205,400, which included a first instalment of £40,000 towards the military defences of the Singapore Naval Base. On Salisbury Plain they had the cottage housing scheme which was estimated to cost £195,000, of which they would have to spend £10,000 this year. At Didcot they were spending £35,000 to complete housing accommodation for certain civilians connected with the Ordnance Depot. The total expenditure this year to provide or to improve married quarters for officers would be £110,000, and the expenditure to provide or improve married quarters for non-commissioned officers and men would amount to £180,000.

"Steel" Houses.

In reply to a question as to technical details of the various types of "steel" houses erected in Scotland, Sir J. Gilmour said that the tender price per house of each type was: For the Weir make: Bungalow of three apartments, £369 10s.; flat of three apartments, £361 10s.; and cottage of four apartments, £399 10s. For the Atholl make: Flat of three apartments, £388, with a reduction of £7 7s. 6d. per house if the firm obtained a minimum number of other orders. For the Cowieson make: Bungalow of three apartments, £380; and cottage of three apartments, £380. These tender prices were for the superstructure and standard foundations only. Transport was additional and varied for the different types according to site. The other costs for the houses completed up to the present could not be ascertained until after the contracts had been completed. The cubic space of each type was:—Of the Weir make: Bungalow of three apartments, 10,075 cubic feet; flat of three apartments, 9,031 cubic feet; cottage of four apartments, 9,991 cubic feet. Of the Atholl make: Flat of three apartments, 8,902 cubic feet. Of the Cowieson make: Bungalow of three apartments, 10,080 cubic feet; cottage of three apartments, 8,728 cubic feet. The average annual rent charged for each type was based on the rents of comparable houses, and was:—Weir make: Bungalow of three apartments, £27 2s. 6d.; flat of three apartments, £26 12s. 7d.; and cottage of four apartments, £34. Atholl make: Flat of three apartments, £26 5s. Cowieson make: Bungalow of three apartments, £21 1s. 6d.; and cottage of three apartments, £27 10s. 6d.

A Cambridge Scheme.

Viscountess Astor asked the Minister whether he had agreed to the Cambridge Town Council letting land at a nominal rent to a local society with a view to building houses to be let at 5s. 6d. per week; and what other councils had made similar arrangements for letting b land at nominal rents.

Mr. Chamberlain said that a proposal nature referred to was recently received fr Town Council, but he understood th Society had now another site in contemp and therefore he had not had occasion t his consent to the letting. As regard second part of the question, he was not a a case; but a reduction in the price of la one of the ways of giving subsidies open to authority under the Housing &c., Act, 19 this method had been followed in some ins though no separate record of it had been

Steel Houses in Scotland.

On a supplementary estimate of £3 for the Scottish Board of Health.

Sir John Gilmour (Secretary of Sta Scotland), said that the estimate in £115,000 for grants towards the housing ex of the scheme which the Government inst for supplementing ordinary house-b methods. In the main, this extra exper had been incurred owing to the speed with the 2,000 original houses had been built. in one sense it was unfortunate that Parli should be asked for more money, on the hand it was, perhaps, a matter of congratu that housing had been expedited, and th of the 2,000 houses it was anticipated 1,750 would be completed before March 31 The Government had decided to continue policy, and they were asking for an add sum to cover their extension of the co with the housing company for an add 1,000 houses. Those were very largely steel houses which had been proved by e ence to commend themselves to the peopl the company which had been carrying o work. The estimate was agreed to by 178 to 78.

Regent Street Leases.

Sir W. Davison asked the Minister of culture if he would state what was the a rental of the Crown leases in Regent-stree to the recent rebuilding following o extinction of the old leases; what was the under the new leases; and what wa estimated cost of the new buildings whi been erected or are in course of erection.

Mr. Guinness said that the original reserved rents amount in the aggreg £26,383 9s. 7d. It was estimated th completion of the rebuilding the rents amount to £450,000 per annum. Th lettings on rebuildings in some cases in small additional areas adjoining but not a situated in Regent-street. As regards last part of the question, the informatio not available. The Commissioners of Lands, when granting new building le Regent-street, specified a minimum sum expended on the erection of suitable bu but it was believed that in most cas minimum had been largely exceeded.

The New Valuation Lists.

Sir F. Hall asked the Minister of H he was aware of the objections entertai rating surveyors and valuers to the crea county valuers as recommended by the valuation committee under the Ratin Valuation Act, 1925, to report on prope be included in the new valuation lists whether, seeing that it would be benefici to the State, the local authorities, a public to adopt instead completely indep valuers, he would reconsider the matte

Sir K. Wood said that he found not the recommendations of the Central Va Committee, which was a body represen classes of local authority to discour employment of independent valuers i nection with the assessment of certain of property. The recommendations, whi intended to secure co-operation between so employed by rating authorities a valuer employed or retained by a valuation committee to advise them, a to the Minister to offer a reasonable pro effectively co-ordinating the work of va within each county.

THE BUILDING TRADE

BY-LAWS RELATING TO BUILDINGS AND STREETS.—X

STREETS.—I.

THERTO we have only been considering ws in relation to buildings, but the Com- e on Building By-laws also considered ontrol of streets, which they characterised matter of so much greater difficulty that comparatively simple recommendations had made as regards building by-laws red supplementing. The task of consider- this subject, and the recommendations e by the Committee in connection with it, w even more complicated than when the mittee reported in 1918, for since that two important statutes have been passed ng in large measure with streets, the ic Health Act, 1925, and the Roads Im- ement Act, 1925, and it will be necessary e whether any of the provisions contained ose Acts have touched questions referred the Committee. The Committee, as we stated in former articles, found that y of the complaints laid before them as to working of by-laws related to a matter governed by by-law at all, viz., the con- ns upon which local authorities are willing ke over the maintenance of private streets. ed, the Report states that some 70 per of the charges laid before them against by-law system arose out of this miscon- on, and the Committee indicated that had felt justified in interpreting the terms of reference in a narrow sense, they might excluded evidence on this subject, but had felt unable to do so for three reasons: It had been alleged by some witnesses that ould be better if this were made a by-law tion; (2) it was to some extent involved questions which were the subject of by- or regulations, for instance, regulations o drain and sewer connections under sec- 21 of the Public Health Act, 1875, and ws with respect to the level, width and truction of new streets under section 157; it was obviously a matter bearing closely building cost.

nder the second of the above headings re- ce might also have been made to sec- 23 of the Public Health Acts (Amend-) Act, 1890, which enables by-laws to be to secure the provision, in connection the laying-out of new streets, of secondary s of access where necessary for the pur- of the removal of house refuse, and other ers. Under section 157 of the Public th Act, 1875, by-laws are authorised to be "With respect to the level, width and ruction of new streets and the provisions he sewerage thereof"; but the Report s out that the clauses in the urban and mediate model codes of by-laws do not, cannot, affect the street except at the of laying-out, and the construction clause not make construction compulsory, bly because there is no guarantee that work done at this stage will not be de- ed in the course of building operations, it survives these, that it will not be ped at the stage of taking over. The rt points out that the model clause goes rther than to provide that where a per- vho lays out a new street does construct fact, he shall make a carriageway and ays in certain proportions, and that the t of the kerb and the slope of the car- way shall comply with certain provisions, h grass margins and similar features are issible; but it is stated that a few local orities have altered this clause to require erson who lays out a new street to do constructional work, whilst others have led some provisions as to materials to be the depth of the foundations, and such ers, either in addition to the above pro- vision or separate from it. Having thus referred to the existing by-laws, the Report points out that whether or not, under the by-laws, construction in the laying-out stage is compulsory, and whether or not constructional work has then been done, the local authorities, under section 150 of the Public Health Act, 1875, or under the provisions of the Private Street Works Act, 1892, can refuse to take over and maintain the street until it has been made up to their specification.

Then follows a passage in the Report which has such a bearing upon questions now to the fore that we quote it verbatim:—"It was alleged in evidence that local authorities, in determining whether they will assume responsibility for the maintenance of existing streets, and what conditions shall be imposed if they decide to do so, frequently insist upon conditions more onerous than circumstances warrant, that is to say, that in order to satisfy a particular authority's own preference, or for the sake of saving comparatively small sums in annual maintenance, a local authority may require an estate owner to go to a capital outlay of disproportionate amount; and secondly, that when a building estate is laid out the authority will not always give information as to the conditions on which they will ultimately assume responsibility for the streets . . . ; thirdly, it has been alleged that even when information has been given, the developing owner has sometimes incurred expenditure in the construction of the roadway and the sewers on the faith of the local authority's statement, only to find, after some few years, that the specification has been changed and that he is required, if he wishes to have the street taken over, to remove perfectly good work on which he has spent large sums of money, and do it again on a more expensive or a different scale." The Committee stated that they were unable to say how far these allegations could be proved, or how often in practice work already done at the earlier stage, whether voluntarily or compulsorily, had been required to be undone at the stage of taking over, but witnesses sent before the Committee by societies representing different interests whose experience lay in widely separated districts had made the same complaints.

That there are grounds for complaint, though perhaps not exactly similar to those mentioned above, has been proved since the issue of this Report, as was illustrated by the case Chester *v.* Briggs (1924, 1 K.B. 239; *The Builder*, March 28, 1924), and even more recently in the case of the Coombe and Malden Urban District Council, reported in our columns for March 26, 1926, and commented upon by us in a note in our issue of April 16 last; and we also dealt slightly with this question in our recent articles on "Making-up New and Private Streets." These cases illustrate two facts: (1) That with the change both in the character of districts and the traffic on the streets, streets laid out as secondary streets may, when they are taken over by the local authority, be required to assume a different character and be used as by-pass roads to relieve traffic on an existing main road (see Chester *v.* Briggs); and (2) that local authorities are now anxious, when taking over streets, to guard against future expenditure out of the rates, and therefore require a degree of permanence and an expenditure which cannot reasonably be placed upon private frontagers (see the Coombe and Malden case).

This leads us to make one or two general observations before considering the suggestions of the Committee. In the passage we have quoted above from the Report it will be observed that it appears to be assumed that any demand when the street is made up before being taken over will be made upon the developing owner, but in practice the matter is very different. The developing owner when laying out private streets makes them up according to the requirements of any by-laws in force and then proceeds to develop his building estate. As he erects buildings they are often sold one by one, and the liability of making up the street before it is taken over by the local authority is gradually shifted from his shoulders and placed upon the owner frontagers. When the first houses are sold, if the by-laws have been fairly stringent, the roads appear in good condition; but in the development of an estate there is usually at first one principal road, and other roads are laid out leading into it. These side roads are often, at any rate at first, culs-de-sac, and the whole of the traction required by the building operations passes over the principal road. This road bears the whole brunt of the building operations, and as in these days material is transported in heavy lorries, it falls into disrepair and the local authority decides to take it over. By this time probably that part of the estate through which the principal road runs has been fully developed, and the developing owner having sold all the houses fronting upon the principal road, has no liability at all as regards it, as the frontagers will be called upon to make it up if it is to be taken over, although in developing other portions of the estate he is still putting a heavy strain upon the principal road with the haulage of material to the other houses he is building there.

Little of the expenditure put into this road at the laying-out stage remains of any use when the local authority come to take it over; the road is worn out, and the frontagers find themselves liable for the whole cost of making up a road according to the degree or class the local authority assign to it. This road is still bearing the whole traffic to other parts of the estate in the course of development, and if the by-roads leading into it form culs-de-sac, it is just possible that when the frontagers on the principal road are called upon to make up that road, the local authority, if they are proceeding under the Private Street Works Act, may exercise their discretion under section 10 and apportion some of the expenses on the frontagers of the houses on those culs-de-sac roads; but this is a discretionary power, and the words of the section, as we showed in our seventh article on "Making-up New and Private Streets," are obscure, access to the principal road having to be obtained "through a court, passage, or otherwise," and the cases decided upon them make it doubtful when such an apportionment may be held good. Under the Public Health Act, 1875, the power does not exist at all.

Under the Private Street Works Act, section 15, a power is given to the local authority to contribute to private street works, but this is also discretionary (see Chester *v.* Briggs), and there is now a corresponding discretionary power under the Public Health Act, 1925, section 81.

The Committee was only appointed to consider the control exercised by by-laws and regulations, so many of the questions we have touched upon in the above statement are outside the purview of their inquiry, as they arise out of the statutes; but, as we indicated in our articles, it is a serious question whether it should be left to the absolute discretion of the local authorities whether streets which are feeders to the principal street should be brought into the apportionment, and the terms of section 10 of the Private Street Works Act should be amended so as to bring in frontagers on streets which are mere culs-de-sac, and who benefit and are dependent upon the principal road, as contributories to the cost of making

up that road without question, the Public Health Acts being also amended to include a similar provision. Secondly, the discretion to contribute given to local authorities who are always anxious to keep down the rates is entirely unsatisfactory. If, when a street is taken over, it is desired to alter its character in the interests of the whole neighbourhood, and to make it relieve traffic from existing roads, there can be no question but that the expenses solely attributable to this change of character should not be thrown upon private frontagers on the street, but that a contribution as of right should be granted by the local authorities both under the Private Street Works Act, 1892, and the Public Health Act, 1925.

It may be well, also, to mention here the provisions of the Public Health Acts (Amendment) Act, 1907, an adoptive Act which, by section 19, enables local authorities to do such repairs as are required to obviate or remove danger to any passenger or vehicle, to streets not reparable by the inhabitants at large and to recover the expenses so incurred from the owners of land or premises fronting, adjoining, or abutting upon the street who have not complied with a notice to effect such repairs; but if a notice under this section is served on the owners, the majority in number or rateable value may require the authority, instead of proceeding under this section, to proceed under section 150 of the Public Health Act, 1875, or under the Private Street Works Act. This, however, involves the local authority taking over the street; so unless the local authority is prepared to take over, this section cannot be acted upon at all, and it is not available to keep streets not taken over from falling into a dangerous condition. A recent decision on this section, in the case Nash *v.* Giles, will be found noted in our issue of February 26, 1927. None of these questions came before the Committee for the reason we have stated above, but in our next article we shall revert to the recommendations of the Committee.

FLUELESS HOUSES

We reprint from the *Times* part of a letter from Mr. P. L. Waterhouse on this subject. The letter runs :—

"In the housing schemes which are still being developed by corporations and councils under the *aegis* of the Ministry of Health, the so-called 'all-electric' house is suddenly becoming popular. The sponsors point out with pride that these houses can be completed very economically in comparison with the old-fashioned ones with flues and chimneys. The fireplace, with its necessary hearth, mantel-register, brick flue, roof flashings, and chimney stack, is a costly item : all these details can be eliminated, with great saving of expense. In the important matter of ventilation, however, the fact is ignored that the properly constructed chimney-flue, with its regular up-draught, is in action day and night, with or without a fire, continuously changing and purifying the air of the room. The automatic method of ventilation disappears from the 'all-electric' flueless house, and in lieu of it is to be an air-brick or ventilator, carried through the wall, to accord with the by-laws pertaining to all rooms without fireplaces.

"I believe it will be generally agreed that in every house, 'all-electric' or otherwise, provision should be made in the living-room for cooking by coal or gas if desired (with the necessary flue), and for a fire-place in at least one bedroom; it becomes then an inexpensive matter, in conjunction with these chimneys, to carry up ventilating flues from other bedrooms. Or, alternatively, gratings might be fixed in the bedroom ceilings to connect with a simple system of ventilation in the roofs. But the flueless house is unhealthy, and should not be tolerated. I believe that if, from reasons of economy or any other motive, the Ministry of Health encourages this form of building, it will very soon find itself in sharp opposition to the medical and sanitary authorities throughout the country."

THE IDEAL HOME EXHIBITION

This exhibition, which opened at Olympia at the beginning of the month and will close on March 26, contains many features and exhibits of special interest to architects and builders. Building materials and specialities are shown in considerable numbers, and in the new hall extension—"The Village of New Ideas"—there are no fewer than eight full-size houses of varying accommodation and built of different materials. Every aspect of home equipment is represented, including furnishing, heating, lighting, and decoration; while in the annexe there is an exhibition of gardens. Below we give a brief survey of some of the more notable exhibits having a special architectural or building interest :—

Belling & Co., Bridge Works, Southbury-road, Enfield, Middlesex. Stand 80, Ground Floor, Main Hall.

This exhibit comprises a representative display of electric fires, cookers, water heaters, and other domestic electrical appliances. There is a large selection to choose from at reasonable prices and in varying finishes and styles to suit any scheme of decoration. Particular attention is drawn to the wide range of domestic labour-saving appliances displayed, such as electric irons, warming plates, boiling rings, kettles, &c.

Bratt, Colbran & Co., and the "Heaped" Fire Co., Ltd., 10, Mortimer-street, W. 1. Stand 117, Ground Floor, Main Hall.

A representative selection of fireplace suites embodying the "Heaped" fire is shown on this stand. Especially interesting are the interiors in rustless steel, a metal which entirely eliminates the troublesome cleaning hitherto associated with steel interiors. High-grade workmanship and quiet architectural dignity of design are noteworthy features of the firm's products.

The British Thomson-Houston Co., Ltd., Rugby. Stand 112, Ground Floor, Main Hall.

A spectacular display of Mazda lamps is here shown. In the foreground, the Mazda clock cut-out, reproduced to a very large scale, is picked out by spot-lights, while the clock face itself is illuminated from behind. To the rear of this tableau a number of cubicles, representing rooms in the home, have been equipped with appropriate B.T.H. fittings to demonstrate, under actual working conditions, the many types and sizes of Mazda lamps, including the latest development—the "Pearl" Mazda.

Candy & Co., Ltd., 87, Newman-street, Oxford-street, W. 1. Stand 77, Ground Floor, Main Hall.

The "Devon" fire, the makers claim, embodies all the correct principles of construction, as the back, sides and bottom are composed of a specially prepared fireclay, which results in considerable fuel economy and an extensive diffusion of heat in the room in which it may be fixed. The fire can be produced to fit in with any colour scheme and with any style of decoration. Examples of the firm's decorative pottery, which is styled "Wescontree" ware, are also on view.

Carter & Co., Ltd., Poole, Dorset. London Office and Showrooms, 29, Albert Embankment, S.E. 11. Stand 34, Ground Floor, New Hall.

This stand is architecturally one of the most attractive in the exhibition. It is built almost wholly of tiles, after the design of Mr. Leslie Mansfield, and illustrates very effectively the various uses to which tiles and pottery may be put in modern buildings. Many different colours are shown, not merely as varieties, but embodied in the design architecturally, and used with rich decorative effect. On the piers standing inside the wings, vases of flowers in coloured faïence provide a glowing touch of colour, while on the walls are some coloured faïence plaques by Phœbe Stabler, which add appreciably to the effectiveness of the exhibit. The stand contains a completely tiled bathroom, with built-in bath and fittings, a tiled kitchen, a cloak room and lavatory (showing a cheaper scheme of tiling), and a centre room devoted to the display of tiled fireplaces, embodying the Carter fire. These are of the all-tile, no type, with both sunk fire on the hearth basket grates. There is also an excellent d of Poole pottery. The floors show attr examples of floor tiling and mosaic.

Clarkhills, Ltd., 27, Old Bond-street, District Sales Offices: 5, Cornwall-s Birmingham; 4, Water-street, Manch King's-road, Lancing, Sussex. Stan Ground Floor, Main Hall.

The "Clarkhill" automatic water he designed to meet the entire domestic hot requirements of the modern household. in the kitchen or scullery, the "Clar it is claimed, will provide all the hot t the house with an unlimited supply of hot in a few seconds. No hot-water tank, ret expansion pipe, is needed with this s which is simple, safe, and economical in wo In addition, the "Clarkhill" electric heater, which works on the thermostat controlled storage principle, is shown.

Cuirass Products, Ltd., Abbey House, T street, Westminster, S.W.1. Stand Ground Floor, Main Hall.

A demonstration of the waterproofing, resisting and heat-resisting qualities of waterproofing paints and compounds is a feature of this exhibit. The liquid mat applied with a brush and will waterproof roofs composed of corrugated iron, zinc, felt, concrete, asphalt, bitumen roofing protective covering. Convincing proof i vided by the demonstration of a roof co with rust-holed corrugated iron, old fel zinc treated with Cuirass liquid proofin putty compound and subjected to a con downpour of water. Other demonstrati interest to architects and builders are give

Empire Stone Co., Ltd., 231, Strand, Stand 41, Ground Floor, New Hall.

The central feature of this exhibit is a garden seat, flanked by two stone oil jar front of the garden seat is a pedestal bir surrounded by small vases. Smaller bird are shown on two small pieces of lawn rounded by a low stone wall carrying stor and vases. Sundials of various desig exhibited at the back of the stand. ornaments in various natural stone colou finishes are shown.

Express Boilers, Ltd., 65, Great Portland W.1. Stand 88, Gallery, Main Hall.

With "Express Boilers," here exhibited are no fumes and no flue pipe is required it is possible to get water at boiling point making or cooking purposes in seventeen s starting from cold. The boiler is shown over the kitchen sink, with a pipe to bat By this means one boiler gives a sufficie water service for the ordinary household a hot bath can be had in a few minutes, nominal cost of 1d.

W. N. Froy & Sons, Ltd., Brunswick Hammersmith, W.6. Stand 71, Floor, Main Hall.

Sanitary fixtures and fittings of variou are here exhibited, including two tile rooms. Special features of the exhibit ar lain enamelled apron-type baths, mad one piece, and the vitreous china acce such as soap and sponge holders, holders, &c., which are recessed into th thus eliminating the nuisance of fixing becoming loose, &c. Examples of the models in vitreous china and marble l basins and porcelain enamelled sinks, also shown.

W. H. Gaze & Sons, Ltd., 19–23, High Kingston-on-Thames. Stand 32, Floor, Main Hall.

Interior decorative treatments and of furnishing are shown to advantage stand. The small room suggests an int and economical scheme of Tudor oak p suitable for a lounge, with appropriate treatment, furnishings, hangings, and A bedroom scheme, arranged in the larg provides plain walls, having texture an

ackground to some fine examples of repro-
on walnut furniture—one of the firm's most
ar and distinctive products. The curtains
he narrow band of enrichment at the junc-
f wall and ceiling provide a touch of colour
attractive yet simple room, thoroughly in
athy with modern ideas of decoration.
ier section of the stand is devoted to
ed wall treatments and furnishing fabrics.

al Electric Co., Ltd., Head Office, Magnet
use, Kingsway, W.C.2. Stand 86, Ground
or, Main Hall.

Iagnet" electrical appliances for use in the
hold, embracing cooking, heating, washing,
ng and lighting by electricity, are fully
n on this stand. A continuous demonstra-
f the appliances is given. The "Magnet
ic Wizard," which washes and wrings
es, cleans and sharpens knives, makes ice
, minces meat, &c., is also on view.

mond Bros. & Champness, Ltd., Alfreton-
eet, S.E.17. Stand 76, Ground Floor, Main
ll.

e exhibits at this stand comprise lifts of all
ptions: (1) Electric passenger lift with
ed mahogany cage and wrought-iron
sure; (2) electric push-button service lift
eavy duty in hotels and business houses;
atented electric service lift for private
s, specially arranged for low current con-
tion; (4) "H. & C" disappearing dining-
lift for private houses, and standard hand
e lift, both fitted with safety self-sustaining
(5) hand power invalid or passenger lift
with self-sustaining gear and every safety
e.

Hawkins & Co., Ltd., and Kelvinator, Ltd.,
35, Drury-lane, Kingsway, W.C.2. Stand
Ground Floor, Main Hall.

e exhibit of these firms comprises an almost
lete range of labour-saving equipment for
odern electric home, including the Miller
vanhoe lighting fixtures, Universal cooking
s, Universal suction sweepers and Universal
ng and ironing machines. A special
e is the Kelvinator automatic electric
eration for the home. The apparatus
without human attention and has no
or other connections, except to an ordinary
e plug in the wall.

ven Stove Co., Ltd., 156, Charing Cross-
d, W.C.2. Stand 125, Ground Floor,
n Hall.

exhibit includes "Interoven" and
r-Interoven" convertible cooking and
g stoves (Pascall's Patents), for cooking
eals, baking bread and pastry, and
ample supply of hot water for baths and
tic purposes and an open fire when
g is over. The stoves are instantly
tible from a cooking stove to an open
ting-room grate. Other exhibits include
y" expanding barless fire fronts for
lising old-fashioned sitting and bedroom
at a small cost; also "Bewty Minors"
"Bewty" dog grates, "Ten-in-one"
ble stool bottom grates, and wrought
range boilers.

ireclay Co., Ltd., Wortley, Leeds. London
rooms, 167, Strand, W.C.2. Stand 94,
nd Floor, Main Hall.

of the chief features of this exhibit is
play of garden ornaments and fireplaces
efco" ware. Many new varieties are
for the first time, including animal
vases, bird-baths, &c., and the possi-
of the material are further shown by its
the construction of the stand itself.
ed garden ware is also shown. Among
ttractive features of the stand is a
of lavatory basins, including one with
led finish, provided to meet the modern
l for a lavatory basin in every bedroom,
signed to harmonise with decorative
s.

Gas Exhibit, 84, Horseferry-road, West-
er, S.W.1. Stand 87, Ground Floor,
Hall.

exhibit consists of a series of rooms
gas fires in artistic settings which
armonise with any style of furnishing.
A number of gas cookers are also shown. There is also a kitchen fitted with the latest labour-saving gas appliances and a bathroom to demonstrate the use of the gas water-heater. A section of special interest to architects and builders is the building section, in which are shown the various types of built-in gas fires and economy flues, by the use of which the chimney breast is abolished and more room secured, with a considerable saving in cost.

Major & Co., Ltd., 205, Borough High Street, S.E.1. Stand 67, Ground Floor, Main Hall.

This exhibit consists of a garden bungalow designed to illustrate the many uses of Solignum, both as a wood preservative and as an artistic decorative stain. Particular attention is directed to its effect on dry rot. The liquid is especially suitable for the preservation of fences and other garden woodwork, and for the permanent staining of floors.

Thos. Parsons & Sons, 315–317, Oxford-street, W.1. Stand 10, Ground Floor New Hall.

The principal feature of this exhibit is a room in the William and Mary style finished in "Parso-Glaze," a high quality scumbling and glazing paint. A number of panels finished in the same material are also on view, showing the novel and artistic effects produced when used in conjunction with Parsons' rubber stipplers. "Parso-Glaze" has been used on the exterior of the *Daily Mail* stands in the furnishing section.

The Plywood Development Association, 97, Cannon Street, E.C. Stand 38, Ground Floor, Main Hall.

This exhibit takes the form of a room, designed by Mr. Joseph Emberton, A.R.I.B.A., showing some of the principal uses to which plywood may be put in the home. The walls, ceiling and floor are covered in plywood, and on the outside walls there are large panels of various woods stained to different shades. There are doors made of thick plywood, and furniture constructed mainly of plywood illustrates some of the uses of this material in cabinet making.

Thomas Potterton, Ravenswood-road, Balham S.W.12. Stand 88, Ground Floor, Main Hall.

On this stand is shown a selection of the standardised types of "Victor" gas boilers, demonstrating a working example of a system supplying hot water for general domestic use. A small installation for warming purposes, with circulating water radiators heated by gas, controlled automatically, is in operation as an instance of supplementary heating equipment for residences or offices, or as an example of treatment for small conservatories, &c. "Thermostats" for the automatic regulation of gas consumption, both water-type and atmospheric-type, can be seen in action.

Raines & Porter, Ltd., Tranby Works, Hull, and London Warehouse and Offices: 17–19, Globe-street, Borough, S.E.1. Stand 57, Ground Floor, Main Hall.

Artistic decorative materials are here copiously exhibited, including: (1) "Velmatt" flat wall finish, which dries with a rich, dull, velvety surface; (2) "Muradek," a washable paste distemper; (3) "Denzene," an undercoating for enamels and paints; (4) "Purol-Flex" finishing paint; (5) "Glosilene Enamel"; (6) "Flexine," which, used as a scumble, a stain, or a glaze, gives natural wood effects; and (7) housing stains and wood preservatives.

Rawlplug Co., Ltd., Rawlplug House, Cromwell-road, S.W.7. Stand 108, Ground Floor, Main Hall.

Rawlplugs are made in sizes to suit every size of screw on the market. The largest plug, when fixed into a hard material, is capable of withstanding a direct strain of over three tons. Other important labour-saving exhibits are a complete range of bathroom fittings in Durium and white enamel; Durofix, the waterproof adhesive; Durolustre, the tarnish preventive; and liquid porcelain, an enamel which, it is claimed, will not chip or crack. Three new Rawlplug specialities not hitherto exhibited are wood preservative, putty compound and liquid proofing.

Rubber Growers' Association (Inc.) 2, 3 & 4, Idol-lane, E.C. 3. Stand 60, Ground Floor, Main Hall.

This exhibit shows domestic applications of rubber, including rubber flooring, panelling, rubber-topped tables, sponge rubber upholstered furniture, sponge rubber mattresses, miscellaneous rubber articles for the home, waterproof clothing, rubber flowers, rubber brushes of various kinds, and a variety of articles made by a new process in which rubber is combined with precious metals.

Samuel Smith & Sons, Ltd., Works and Showrooms, Beehive Foundry, Smethwick, and 41, Colmore-row, Birmingham. Stand 121, Ground Floor, Main Hall.

The patent "Foresight" range, the new "Foresight Junior" combination stove, and other grates and ranges of all descriptions are exhibited on this stand. The "Foresight" range, employing one fire only, cooks, bakes, boils and ensures a plentiful hot-water supply at one and the same time. It can be converted into a sitting-room grate in a few seconds, and also, it is claimed, reduces the fuel bill by half. All these advantages are also embodied in the new "Foresight" junior stove, which, being portable, can be fixed in a few hours.

Spenser's "Silverlite," 6, London-street, Paddington, W. 2. Stand 97, Ground Floor, Main Hall.

The advantage claimed for the "Silverlite" generator is that a complete installation provides the essential services required in a modern country house, such as lighting, heating, and cooking. Various fittings are shown suitable for houses of any design or period; also gas fires, Jacobean dog grates, and "Sunray" reflectors. How petrol gas can be applied for cooking is also demonstrated.

Triangular Construction Co., Ltd., East Molesey, Surrey. Stand 42, Ground Floor, New Hall.

The Triangular system of construction is here fully shown; the "Trianco" block, slab and tile machines are demonstrated, and a complete range of the products of the machines are on view. Special attention is drawn to the "Trianco" concrete mixer, now shown for the first time. The special features of this mixer are its bearings, which are all protected against contact with the mix. It can be converted for working and discharging either right or left-handed.

Triplex Foundry, Ltd., Great Bridge, Staffs. London Showrooms, 12, Newman-street, W. 1.

Triplex grates fitted with various tiling effects are here displayed. The popular "C" pattern is shown at work, and cooking and hot-water supply demonstrations are being constantly given. A notable feature in connection with these grates is the small amount of coal needed to obtain efficiency.

Universal Housing Co., Ltd., Bury Works, Rickmansworth, Herts. Stand 36, Ground Floor, New Hall.

This firm exhibits a modern labour-saving house erected on their reinforced concrete system of construction by which method 500 houses have been completed during the past twelve months. Externally, the house is designed on attractive Georgian lines with only slight variations to allow such important features as the latest type of steel windows and casements to be embodied. The planning of the house is compact and economical. Several alternative internal plans are available to suit varying aspects.

Samuel Wills & Co., Ltd. Bristol: 40, Castle-green. London: 6, Eldon-street, E.C. 3.

This stand is designed to show the artistic properties of "Wallpax," which, it is stated is the only patent wax paint made in England. The wall panels are decorated in pleasing shades, showing their use for different purposes. Specimens of various surfaces treated with this material are also shown, such as wall-paper wood, Sirapite plaster, Keene's cement, asbestos, &c. Samples are also exhibited of varnishes, stains, enamels, hard gloss finishes, &c.

Housing Experiment in Kent.

Mr. Chamberlain, Minister of Health, was present on Monday at the opening of some cottages at St. Paul's Cray, Kent, which had been erected by Mr. T. H. Nash, as an experiment in the direction of solving the housing problem. They are of the bungalow type, and their cost is only from £250 to £275. It is understood that this is not a commercial enterprise, for those who, along with Mr. Nash, are interested in the movement, have placed their plans at the service of any local authorities who wish to make use of them. The cottages have been passed by the Ministry of Health for the grant of the subsidy under the Housing Acts. They contain three bedrooms, living room, kitchen, and bathroom.

All-Electric Houses at Barnes.

As an experiment, the London County Council Housing Committee propose to instal electricity not only for lighting, but also for cooking, heating and domestic purposes, in a group of 57 houses on the Castelnau estate, and on the remainder of the estate, comprising about 599 houses, to instal electricity for general lighting purposes, and gas for cooking and heating. The Barnes Urban District Council will lay the cables on the whole of the estate and provide the necessary services free of cost to the Council. It is estimated that the cost of wiring the 57 houses will amount to about £1,082, and that the outlay on the remaining houses, together with the superintendent's house and administrative buildings, will be £6,887.

British Standard Specifications.

The British Engineering Standards Association has just issued British Standard Specifications for Zinc Oxide, Ready-Mixed Linseed Oil Paint, and Tinted Zinc Oxide Ready-Mixed Linseed Oil Paint. They contain clauses regulating the composition, together with standard reception tests, for the purchase of these materials, together with appendices giving methods of carrying out the tests. These specifications have been prepared at the request of the paint manufacturers by a Committee representative of both the buying and manufacturing interests. Copies of these specifications (Nos. 277 and 278—1927) may be obtained from the B.E.S.A. Publications Department, 28, Victoria-street, London, S.W.1, price 2s. 2d each, post free.

PROPOSED NEW BUILDINGS & OTHER WORKS*

In these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T for Ministry of Transport; C.B. for County Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

FOLLOWING is a list of abbreviations:—Borough Surveyor, B.S.; Borough Engineer, B.E.; District Surveyor, D.S.; Clerk, C.; Town Clerk, T.C.; County Engineer, C.E.; County Surveyor, C.S.; County Architect, C.A.; Surveyor, S.; Engineer, E.; Borough Architect, B.A.; Architect, A.

BUILDERS' HANDBOOKS.

Laxton's and Lockwood's Builders' Price Book 1927. (London: Kelly's Directories, Ltd.) Price 7s. 6d. net, post free.

The features of this book are too well known to need special mention, but the fact may be emphasised that all the information contained in this edition has been subjected to the most thorough revision and correction. As in previous editions, the prices in general apply to London, but sufficient details will be found in the analyses, tables and memoranda, under the various trade headings and elsewhere to enable the book to be used in the provinces equally as in London. The current rates of wages in the building trades throughout England and Wales are also given. The alphabetical list of specialities and proprietary articles and brands (some 10,000 in all) has again received careful attention, and we feel this will prove one of the most popular sections of the book. It is printed on blue paper and gives the name and address (and in most cases the telegraphic address and telephone number) of the manufacturer of each article. This is a handbook which, we are confident, will prove as invaluable to every builder and contractor as it has during the century since its inception.

Building Construction. Part II. Advanced Course. By CHARLES F. MITCHELL. Tenth edition, revised and enlarged. (B. T. Batsford, Ltd., 94, High Holborn.)

The tenth edition of this popular and well-known work consists of nearly 1,000 pages of up-to-date information relating to building construction. The main features have been retained, but have been completely revised, and new chapters have been introduced upon steel-work and reinforced concrete. This book would perhaps enjoy even greater popularity if the author would bear in mind that all the readers are not Einsteins, and that considerable help would be derived by older readers to whom this book affords valuable reference, if more of the problems were as fully worked out as those on

page 516.

THE SCOTTISH BUILDE

NEW BUILDINGS IN SCOTLAND

Dundee.—CINEMA.—The new picture theatre to be built at Hilltown is to be a larger building than was originally anticipated. The architects are Messrs. MacLaren, Soutar & Salmond, 15, South Tay-street.

Aberdeen.—CINEMA.—The Aberdeen Picture Palaces, Ltd., are proposing to reconstruct the Electric Theatre, and to provide accommodation for over 2,000 people, at an estimated total cost of £60,000.

Edinburgh.—HOUSES.—The Housing and Town-Planning Committee of Edinburgh Town Council has agreed to recommend the Town Council to proceed with the erection of 900 houses.

Dundee.—BUILDING.—Plans and sections of new buildings, &c., have been lodged at the office of the City Engineer to be submitted to the Works Committee for approval:—Gray's-lane, Lochee, cinematograph theatre for Mr. A. E. Binnall—architects, Messrs. Allan & Friskin, 26, Castle-street; South Lindsay-street, alterations to church, for Messrs. A. G. Kidd, Ltd.—architects, Messrs. Mills & Shepherd, 9, South Tay-street.

Glasgow.—TOWN PLANNING.—A communication has been received from the Scottish Board of Health by the District Committee for the Lower Ward of Lanarkshire, in which the Board proposed to convene a conference of representatives of local authorities in the Clyde Valley, with reference to the regional town-planning of the area from Hamilton and Wishaw to Greenock and Gourock.

Edinburgh.—BUILDING.—The Dean of Guild Court has granted the Corporation a warrant for additions to the Electricity Supply Station at Portobello. The plans passed were for the erection of a turbine house and a switch house, and form part of a building extension scheme which will cost about £200,000. The following were also approved: Mr. P. R. M'Laren, six garages at Moira-terrace-lane; Messrs. J. & W. M'Lauchlan, 12 houses at Traquair-park East, Pinkhill; and Mr. J. Robb, nine garages at Tri grove.

Falkirk.—HOUSES.—The following war have been granted by the Dean of Guild C to the Falkirk Iron Co. (Ltd.), to erect 20 h at Hayfield, Bankside, Falkirk, at a co £7,800. Mr. J. G. Callander, architect, Bank Building, Falkirk, has also rec warrant to build a villa and garage at Ma Loan, Falkirk, at £1,675.

Irvine.—EXTENSION.—The Hosiery M facturing Co. are to carry out extensions to factory. Plans for the work, which is estim to cost £6,500, have been approved by the of Guild Court.

Saltcoats.—PAVILION.—The Dean of Court has passed plans for the Town Co to erect a pavilion. The hall, with gallery provide accommodation for about 800 per This scheme is estimated at £4,000.

Greenock.—EXTENSION.—The directors o Greenock Royal Infirmary are now ra £60,000 for the proposed extensions to infirmary.

Kilbirnie's Auld Kirk.

A feature of the annual meeting of the N Ayrshire Church of Scotland Office-Bea Union, held in Kilbirnie Parish Church Saturday, was a lecture on the history o church by Mr. James Houston, A.R.I. who explained that not a little of the avai knowledge regarding the very early histo the church had been pieced together as a r of discoveries made at Kilbirnie Loch. It now known that the loch had been inha by lake-dwellers who occupied huts buil piles, and it was safe to assume that a pla heathen worship had stood near the pr church. Conflicting facts emerged rega the early history of the Christian Chur Kilbirnie, but the lecturer inclined to the that the church was associated with Brandane. From ancient tombstones covered in the old graveyard it would a that Knights Templars were buried the

BUILDING TRADE WAGES IN SCOTLAND

THE following are the present rates of wages in the building trade in the principal town Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for e that may occur:—

TRADE NEWS

Cleaning Requisites.

Messrs. Wm. Moore & Co., of Lauderdale Buildings, Aldersgate-street, have sent us their new price list, No. 56, which gives particulars and prices of their dust-sheets and cleaning requisites, in which this firm specialise. The list will be sent on request.

London Ice Club.

We are informed that for the foundation work and floors of the London Ice Club, illustrated and described in our issue for February 18, some 900 tons of "Druid" brand cement were used, supplied by Messrs. Henry I. Greenham, Ltd., of Goods Station, Shepherd's Bush, W.12, builders' merchants and brick manufacturers.

Concrete Mixers and Crushers.

We have been advised that Messrs. Frederick Parker, Ltd., have increased the period of their guarantee on their well-known concrete mixers and crushers from six months to twelve months. This firm has also received another repeat order from the Birmingham Corporation for concrete mixers, making a total supplied of ten. This is the second repeat order since the original order for six mixers was placed some years ago.

Oil Bound Water Paint.

Messrs. Blundell, Spence & Co., Ltd., of 9, Upper Thames-street, E.C.4, and Hull, have issued a colour booklet relating to their new oil-bound water paint. This is prepared, we understand, from the finest pigments, bound together with an oil medium, which makes it easily worked, washable and economical in use. This booklet, which gives the full range of colours obtainable, will be supplied upon application as will their card displaying the shades of the "Muresca" dry distemper colours.

Paints and Enamels.

We have lately received copies of the new tint cards issued by Messrs. A. T. Morse, Sons & Co., Ltd., of Plaistow, E.13, showing the 32 standard shades in which their "Velvolin" and "Velvolette" oil paints and enamels are manufactured, and also the 16 most popular colours in Morse's Decorators' gloss paint. Although this firm are known chiefly as distemper specialists, they have been manufacturing other high-grade decorative materials, as paints and enamels, for 30 or 40 years, and these new tint cards are based on their experience of the present-day colour taste.

Floor Tiles and Stair Treads.

We have received from Messrs Robert W. Blackwell & Co., Ltd., of 36, Emperor's-gate, S.W.7, a sample of their new "Basaltak" floor-tiling and stair-treading, composed of fused basalt, which, as is generally known, is a hard rock of volcanic origin. It is hard enough to scratch glass and resists wear to a remarkable extent, while it always retains a non-slip surface. We understand that the London Electric Railways have placed orders for "Basaltak" tile. Samples will be submitted and prices quoted upon request to the manufacturers.

Trade Opportunities in Winnipeg.

The Officer-in-Charge of the office of His Majesty's Trade Commissioner at Winnipeg (Mr. A. M. Wiseman, M.C.) reports that a local firm is desirous of being placed in touch with British manufacturers of tiles, sanitary ware, steel sashes, floorings and builders' hardware and similar lines in connection with the erection of an auditorium at Winnipeg. The enquirer also wishes to be placed in touch with manufacturers of materials the use of which improves the acoustics of buildings. British manufacturers interested in the enquiry can obtain further particulars upon application to the Department of Overseas Trade, 35, Old Queen-street, London, S.W.1. Reference number BX, 3261 should be quoted.

Industrial Electrical Cooking Equipment.

The General Electric Co., Ltd., have opened a showroom at Magnet House, Kingsway, W.C.2, devoted entirely to industrial electric cooking equipment, in which there is a comprehensive display of "Magnet" apparatus designed and built for installation in hotel kitchens, restaurants, canteens, bakeries, &c. In each of the models economy in current consumption, mechanical strength, standardisation of component parts and ease of replacement of the heating elements are special features of the design. A cordial invitation is extended to all who are interested in industrial electrical cooking equipment to visit these new showrooms, where an expert staff is always available to render service by way of explanation, or to discuss schemes of installation for standard or special requirements.

Central Heating with Fuel Oil.

Central heating in this country has made great strides during the last few years, the advent of fuel oil having given considerable impetus to the development of clean and efficient heating systems. The advantages of this new era in heating methods are set out in a valuable and interesting booklet, "Modern Central Heating," issued by Messrs. Shell-Mex, Ltd., of Shell Corner, Kingsway, W.C.2. Cleanliness of the boiler-house, with absence of unsightly coal bunkers and insidious coal dust and total absence of sooty fumes are special features of the oil-fed system, while the economy due to the ease with which a uniform temperature can be maintained is very great. Other advantages claimed are prefect safety ensured by automatic safety controls, while, owing to the ease of lighting up with oil and the rapidity with which the requisite temperature can be obtained from the cold, the plant can be shut down overnight, where a banked fire would otherwise be necessary. This booklet will be sent to all interested upon mention of *The Builder*.

New Birmingham Cinema.

The scheme for building a new super-cinema in Icknield Port-road, Birmingham, is making steady progress. The venture is expected to cost close upon £50,000, and the building will provide seating accommodation for 1,500. The architect is Mr. Harold Scott, A.R.I.B.A., King's Court, 115, Colmore-row, Birmingham.

Birkenhead Super-Cinema.

It is understood that plans for the new super-cinema in Borough-road, Birkenhead, have now been passed. The theatre will seat about 1,500 people, and cost about £30,000. Brick and stone will figure largely in the construction. The architect is Mr. H. A. Thomas, A.R.I.B.A., of Commerce Chambers, 15, Lord-street, Liverpool.

New Power Station, Southend.

The Southend Corporation has decided to ask for a special order to erect a £649,000 electricity power station with a 25,000 kilowatt capacity on Canvey Island. The station will supply not only the borough, but all the villages in the Rochford Hundred with the exception of Shoeburyness.

"Sell's Telegraphic Addresses."

In "Sell's Telegraphic Addresses," this year, there are some 100,000 firms listed in the main Directory, with each being given the full name and postal address, cable and telegraphic address and telephone number. In addition the name is paged and position numbered so that it may be found instantly either by name or telegraphic address by a new system of cross-indexing. Among the many other features may be mentioned a classified trades list of Great Britain and Ireland, containing information about 130,000 leading firms, classified under 3,500 separate headings. There is a section devoted to the building and allied trades containing a list of the leading firms, arranged alphabetically under their respective trade headings. Other important and useful information includes lists of all Consuls, Chambers of Commerce, and Trade Marks and Brands Register. The price is 45s., but it is possible to order the book for three years at a saving of 10s. per annum, payment being due annually on publication.

*R. & T. Howarth, Rochdale.

ESTIMATING ON RIGHT LINES

Everyone whose business it is to quote for building work should master the principles upon which estimating is based. These principles are clearly explained and illustrated in

'HOW TO ESTIMATE'

by J. T. REA,

a unique and invaluable work which is not excelled in thoroughness or in scope by any similar book known.

Fourth edition (now ready). 540 pages. Price 15s. net (by post 15s. 9d.). Containing thousands of prices and hundreds of examples of analysis, showing how a builder can make up rates for himself. In view of the difficulty of fixing standard prices under present conditions, the author has included an important series of Adaptation Tables and Percentages (corrected to February, 1926), *which show how rates may be adjusted to meet variations at any time.*

Before purchasing any other book on this vitally important subject, you are invited to inspect this—the standard work which is in use by over 30,000 builders.

A COPY WILL BE SENT BY RETURN, AND YOUR REMITTANCE REFUNDED IF THE BOOK DOES NOT SATISFY YOUR REQUIREMENTS.

XXII.—No. 4389. MARCH 18, 1927

DEFINITION

E agree with Professor Pite, whose interesting letter on the Registration of Architects we are glad to publish this week, that a great deal depends upon the meaning of the words "architect" and "architecture," in the Registration Bill of the Royal In- British Architects, and we drew attention to the any attempt at a definition in our first comments on We remarked on that occasion that these defini- d be necessary when the Bill came before Parliament he promoters might find this their real difficulty. Those ve that architecture consists in building beautifully se a plea for art, though they may question whether ration of those who practise what is called archi- as inconsistent as Professor Pite believes with the the art as he would define it.

te with a certain amount of diffidence, but we believe understanding of the doubts and misgivings of Prof. nose who think with him, but just as he may be right benefits may be imaginary which the profession of hope to secure from a legal monopoly of the words ," "architecture" and "architectural" may not equally imaginary that the "formalities of design ns conducted on preconceived limited courses of eprive us of "the impetus, enthusiasm, insight which are expressed by a work of architectural art?" not forget that the Royal Institute of British Archi- ad a qualifying examination for its Associateship for , and we should be sorry to think that those who d it are not better architects as a whole than many of lances" who have not, and yet who practise as ." Professor Pite tells us that limitations of archi- dy to the R.I.B.A. programme has had a deadening he architectural spirit of the day, but if he be right t be wiser to criticise the programme rather than the examination? Speaking for ourselves, we can only e standard of design of those who have passed their ip and who submit their work to us for publication— eive many hundreds of drawings and photographs e of a year—is almost always higher than that of those ot, and we have always regarded the R.I.B.A. examina- valuable test of a candidate's ability to practise as . Professor Pite tells us that England has profited dom which is a necessity to the practice of art; se he means freedom based on knowledge, and we he works of architecture he cites—Rennie's Waterloo n Bridges, the buildings at South Kensington by ott, &c.—were due more to the "sporadic mani- genius than to the fruits of laborious and systematic ." But after all, there was this laborious and organisation, this training and education as we it, which it appears possible to test by examination erference with such manifestations of genius; and ave the School of Mines, the Albert Hall, and other h display very high architec- tural qualities, we look the other works of past and present times freedom gives us and which we do not admire.

not for the time being concerned with the the Bill for the Registration of Architects Parliament, but in our opinion the definitions Pite refers to are necessary and will be asked ey are difficult to supply, not only because of nterests but because of the inherent difficulty in art at any time, and especially an art that has been ence and business as well. We are not going to attempt a definition: we will leave that to others, but prefatory to asking our own questions, we should like to refer to the interesting definitions given by the late Sir Thomas Graham Jackson in his book on "Architecture," published immediately after his death in 1925. In his introduction the author examines the definition of Vitruvius, that "architecture is a science involving much 'discipline,' or mental training, and deep knowledge of various kinds," that it springs from two elements, *i.e.*, a knowledge of practical building work and the application thereto of Reasoning, both being equally necessary and essential. Sir Thomas Jackson appears to accept this definition, but with the condition of beauty added: "To the definition of architecture by Vitruvius, as building guided and directed by Reason, we only want to add the condition of beauty, and the inclusion of the æsthetic sense within the realm of Reason. As prose rises into poetry by the greater elevation of thought, the finer flow of language, the touch of sympathy, grace and pathos, so does Building pass into Architecture with the superior grace of the main forms of the fabric, perfect expression of the conditions of the construction, and closer harmony between purpose and achievement." We are afraid this definition—in its summarised form, "Architecture is the poetry of construction"—will not satisfy Parliament any more than the reply of the R.I.B.A. Registration Committee to the Incorporated Society of Auctioneers pressing for a definition of the expression "*bona-fide* architect," *i.e.*, that the Institute "considers this to mean a person who has been trained as an architect, and who is engaged in the practice of architecture as his sole, or at any rate his main, means of livelihood." But we at all events know the kind of training the Registration Committee mean, and we think we are right in concluding that it is what Vitruvius meant by "a knowledge of practical building work and the application thereto of Reasoning," and while this of course is part only of Sir Thomas Jackson's definition, it is an essential part on which those who wish to practise as architects may well be examined. For the rest, for the condition of beauty and the æsthetic sense demanded by Sir Thomas Jackson, is the addition of these impossible in a training in "practical building work and the application thereto of Reasoning"? Is it inevitable that professional ideals of practice will become stereotyped? Is it certain that an official Board would "repress revolts from professional ideals and practice of the time being"? Must "design examinations" necessarily be conducted on preconceived "limited" courses of study? And if they are—and if this is to be regretted—what is there to hinder the freedom of artistic thought of the young architect who has been so trained? Candidates for the R.I.B.A. Associateship can pass their examinations at the early age of 21, and we cannot see what there is to hinder the full play of inspiration of any genius after the passing of a qualifying examination, while even the amateur or engineer or builder referred to by Professor Pite will be as free with the passing of the Registration Bill as they are to-day, provided they do not call themselves architects—just as General Scott, although carrying out architectural work, was not called an architect—which, of course, is one of the chief criticisms of the present Bill of many ardent registrationists.

We respect the opinions of those who, like Professor Pite, write in the interests of architecture as an art, but though we do not by any means identify ourselves with all the beliefs of the promoters of Registration, and do not necessarily tie ourselves to the opinion that the principle of registration is a definitely wise one, we fear we must be classed with those who do not appreciate the implications upon the status of the art to which he refers. If we did we would not hesitate to say so.

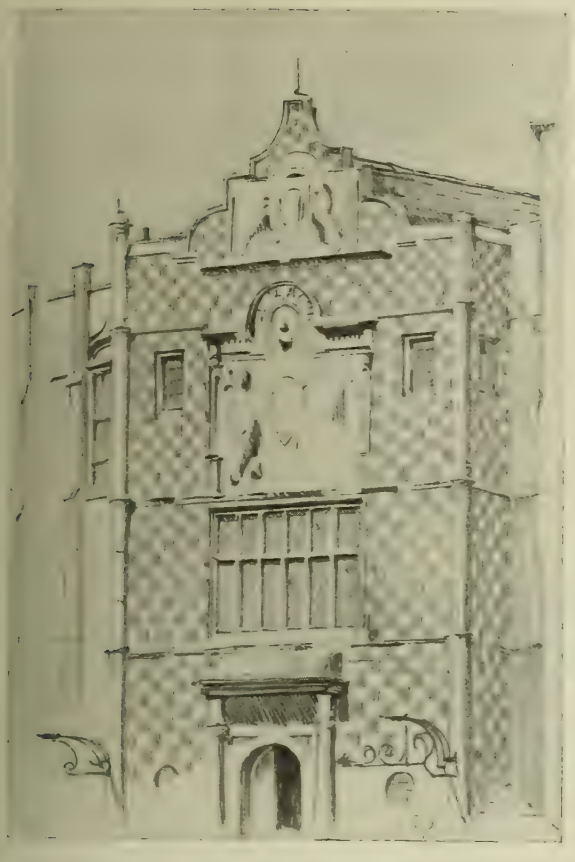
NOTES

A Nomination. The election of a new President of the R.I.B.A. is a matter which concerns the interests of all the members, and as the most prominent representative of the profession architects are naturally concerned in his action during the tenure of the presidency. The President holds in his hands such large capacity for good to the art and the profession of architecture that it is natural there should be keen interest felt in the possibilities which await each succeeding holder of the office. Whether we look upon the art or the profession we are all desirous that they will both have an efficient and worthy representative. If what we hear unofficially be correct we can hardly doubt that in the person of Mr. Walter J. Tapper, A.R.A., the best interests of our art will be worthily upheld. He is one of the few practising architects in the first rank who have ably upheld the traditions of our race in the field of Gothic art, and few, we imagine, would bring a pleasanter personality into the realm of architectural affairs.

The Manchester School of Technology. Some plausible statements have reached us as to the justification for instituting a competition for the Manchester Institute of Technology extensions; but nothing that, in our judgment, appears to justify the action of depriving Mr. Cross of his rightful position in regard to it. A correspondent assures us there will be profound dissatisfaction amongst many members of the profession if Mr. Cross's rights are overlooked.

London Bridges. A serious moment is arriving as to action in regard to London bridges, and we sincerely hope that before the Government and the County Council come to final agreement as to the course of procedure, a clear light will be thrown on what will be the effect on the general amenity about the Charing Cross area by the procedure which will be adopted.

An Appeal to the Building Industry. On page 459 will be found a letter from Mr. F. Higgs, in which the help and support of all those interested in the building craft and in its allied trades are asked for in connection with an effort now being organised to raise funds for the erection of five more houses at Dr. Barnardo's Boys' Home at Woodford Bridge. The building craft is always quick to respond to any deserving appeal, and we cannot but feel assured that its support will be readily forthcoming now. The fine and selfless work among the poor children of London that is done by the Institution is of a nature well enough known already to require no further acknowledgment, and we are confident that this gift from the building craft, which will celebrate the occasion of the Diamond Jubilee of the Institution, will not be given grudgingly. Acknowledgment of subscriptions, which should be sent to Mr. F. Higgs, Station Works, Hinton-road, Herne Hill, S.E. 24, will be made from time to time in these columns.



Shanghai. Judging by the photographs of the Shanghai sea front, it appears that Western civilisation, as expressed in "Renaissance Palaces," has entirely dominated the European quarters of the city, to a greater extent in Bombay, where an Oriental f been admitted. This complete ising of Oriental towns is surely tectural disaster, and it is a that more and more local charac being sought. The French, i turned out another Marseilles, some years later, French archit work on Tunis they seem to ha the mistake of transporting bodily into the East, and the Tunis, in consequence, became interesting. Our architectural of Shanghai probably appears ill- to the Chinese; we obtain a co their country, and make no whatever to their architectural traditions.

Antidote to Specialisation. We are all awa increasing special human effort wh about largely beca increasing complexity of moder its necessities. It is therefore to note Mr. Alan W. Davson's of an antidote to the attitud which specialisation brings a writes on technical sympath *Journal* of the Institute of Arbi follows:—"Technical sympathy try may, it is thought, be defi appreciation by each individu contingent problems arising o work and the respective contri each individual of each grad their solution. It is the new modern industry. It is the onl to specialisation, the missing lin industry and social life and be various grades of modern indus the key to team work, to s functions, to the discipline resu knowledge and appreciation of

he highest degree of efficiency in
, whether for gain or service.
l sympathy will gradually
in its significance and in its
meaning as interest in it develops
t for knowledge, and knowledge
perience result in the practical
ration of its infinite value in pro-
co-operation throughout every
industry on the lines indicated."

The Specialists and Administration. Mr. Davson further writes: "Every worker, whether 'brain' or 'hand,' must be a specialist, and, if possesesd of the inherent characteristics and given the necessary key knowledge, can be an administrator within his own grade and sphere. But the greater the tendency of the individual to specialise at one employment the less does he become suitable to the specialist work of an administrator. Whilst, therefore, an individual may start in a single specialist employment, his power to function efficiently in that capacity will diminish as his administrative ability increases."

The Iconoclast at Canterbury. So recently as February 19, we read about the proposed demolition of St. Margaret's Church, Canterbury, which a correspondent describes as the most beautiful in the city. We can hardly credit any belief in the wisdom of allowing ecclesiastical authorities to control the existence of our old churches if such as this are to be destroyed with their sanction. We are glad to note one member of the City Council protesting that they should not disturb any of their old-fashioned streets —if they were going to have wider roads for the traffic, let them keep them outside. Both in big industrial centres or in quiet sleepy cathedral cities, one found ancient monuments preserved. The Canterbury City Council are apparently alive to the danger which threatens the ancient beauty and interest of the city and have passed a resolution of protest. It will be hardly possible for the Archbishop to disregard the protests which have been made.

Princes Street, Edinburgh. Anything which is proposed to be done in the way of alteration or addition to Princes Street, Edinburgh, calls for very careful consideration, but we may rest assured there is enough competent advice to be obtained in Edinburgh without any suggestion from outside. The sketch design by Mr. Jas. B. Dunn, published in the *Scotsman*, shows a very pleasing arrangement of steps round an equestrian statue, which would certainly be an agreeable feature from the gardens.

British Empire War Memorial Tablet, Bethune.
Executed by Mr. Reginald Hallward from a design by Lieut.-Col. H. P. Cart de La fontaine.
[The Tablet is modelled in Gesso-Relief, richly gilded and coloured.]

GENERAL NEWS

92 Ft. High Flats.

Blocks of flats about 92 ft. high, the highest built by the London County Council, are to be erected, according to the *Daily Mail*, to take the place of slum dwellings in the Ossulston-street area of St. Pancras, N.W. The scheme is to cost about £1,250,000. Electrically lighted and equipped with large lifts and central heating, these buildings will accommodate 2,000 more people than the buildings on the site do now. Col. Levita, chairman of the L.C.C. Housing Committee, is said to have stated that the height of the flats would come within the London Building Act, which specifies that they shall not exceed 80 ft. in height with certain arrangements with regard to the roof.

New Structural Engineering Scholarship.

The Institution of Structural Engineers announces that particulars are now available of a third triennial scholarship valued at £300. This scholarship, which will be known as the Brenforce Travelling Scholarship, is offered with the object of encouraging the æsthetic design and artistic development in England of concrete and reinforced concrete; and also of providing the opportunity of foreign travel with the great experience that this affords to structural engineers. The competition for the scholarship will consist of an examination in the design of a reinforced concrete structure, conducted on Beaux Arts methods. Further particulars may be obtained from the Institution, 10, Upper Belgrave-street, S.W.1.

Garden Cities and Town-Planning Association.

The spring tour of the Association this year will be to the South of England, and the cities to be visited are Bournemouth, Southampton, Portsmouth, and Winchester. The tour has been arranged with the corporations of the cities concerned, and representatives of those cities will accompany the party on each series of visits, and there will thus be afforded, under most favourable conditions, a unique opportunity of seeing municipal development of varying character. The inclusive cost of the tour, which is from Friday, April 22, to Thursday, April 28, is £10 10s.; and forms of application may be obtained from the Secretary, Garden Cities and Town Planning Association, 3, Gray's Inn-place, W.C. 1.

St. Bartholomew the Great.

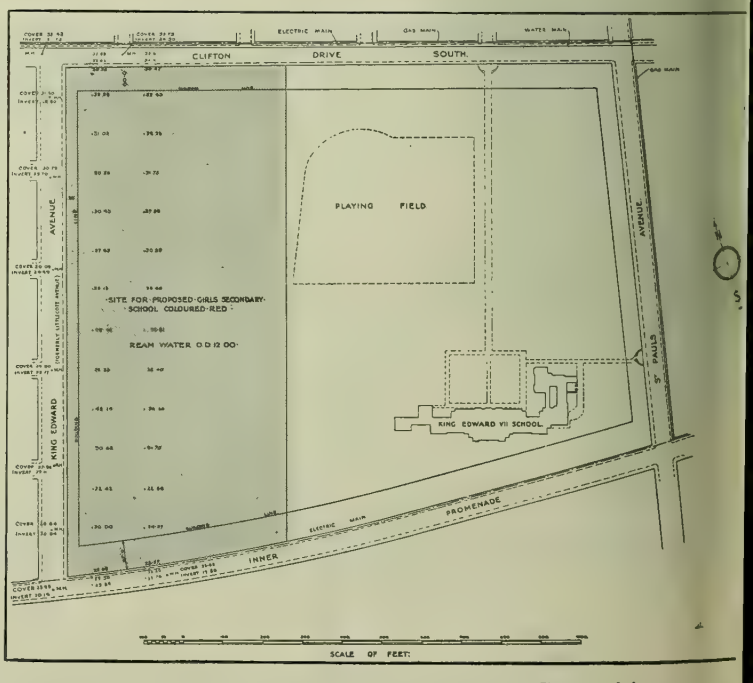
Workmen, while digging under the portion of the old "Coach and Horses" Inn, recently purchased by the church of St. Bartholomew the Great, Smithfield, in connection with the restoration of the old church cloisters, have discovered traces of a fresh ancient north cloister. The existence of such a cloister was entirely unsuspected, and the church authorities are revising their present reconstruction scheme with a view to acquiring the necessary property on which to conduct the excavation work. The new discovery is the base of the vaulting shaft of the first bay, but Sir Aston Webb, under whose supervision the work is being carried out, is of the opinion that almost certainly the succeeding four or five bays exist under the Inn building. In his opinion, every effort should be made to acquire the necessary property. The cloister which abutted on the old chapter house is already well on the way towards restoration. Not only is the transformation which has been effected remarkable, but most surprising is the quantity of original stonework still standing and in comparatively good preservation after some 360 years of neglect. Up to 1905 the cloister was being used as stables, and rough walls covered with plaster obscured the ancient architecture. A part of the stables was acquired in that year, and the three north bays of that cloister have since resumed their former appearance. In 1923 the remaining part of the stables containing the rest of that cloister was bought. Here work is proceeding together with excavations to permit of the restoration of the west wall of that cloister, and, in addition to the base of the vaulting shaft, a piece of the original Norman walling has been found under the fifteenth-century walling. In the cloister itself the former floor level is indicated by the discovery of some of the original tiles, black and yellow alternatively, *in situ*. The floor of the whole cloister will be reduced to this level. In clearing the layer of material used to raise the floor level, the workmen have recovered a considerable amount of the stonework from the vaulted roof, and this will be used in the restoration.

Architects' Registration.

A report has been issued (says the *Manchester Guardian*), of a conference in London between delegates of the Incorporated Society of Auctioneers and Landed Property Agents and the Incorporated Association of Architects and Surveyors, under the chairmanship of Mr. Samuel Wallrock, the Society's President. It was decided that the Society should actively co-operate with the Association in opposing the Architects' Registration Bill, as now drafted, promoted by the Royal Institute of British Architects and down for second reading in the House of Commons on April 8. Opposition is based on moral and material grounds. It is not thought right that the entire control of the architectural profession should be placed under the Council of the Royal Institute of British Architects. The opposing bodies consider that no properly qualified practitioner should be debarred from practising as an architect or from recovering his fees for work done because he combines the practice of architecture with another calling and derives only part of his livelihood from the former work. Before the conference concluded, Mr. Wallrock and Mr. Forbes Campbell (President of the Association), expressed the hope that the two bodies would co-operate for the future on all matters of mutual interest.

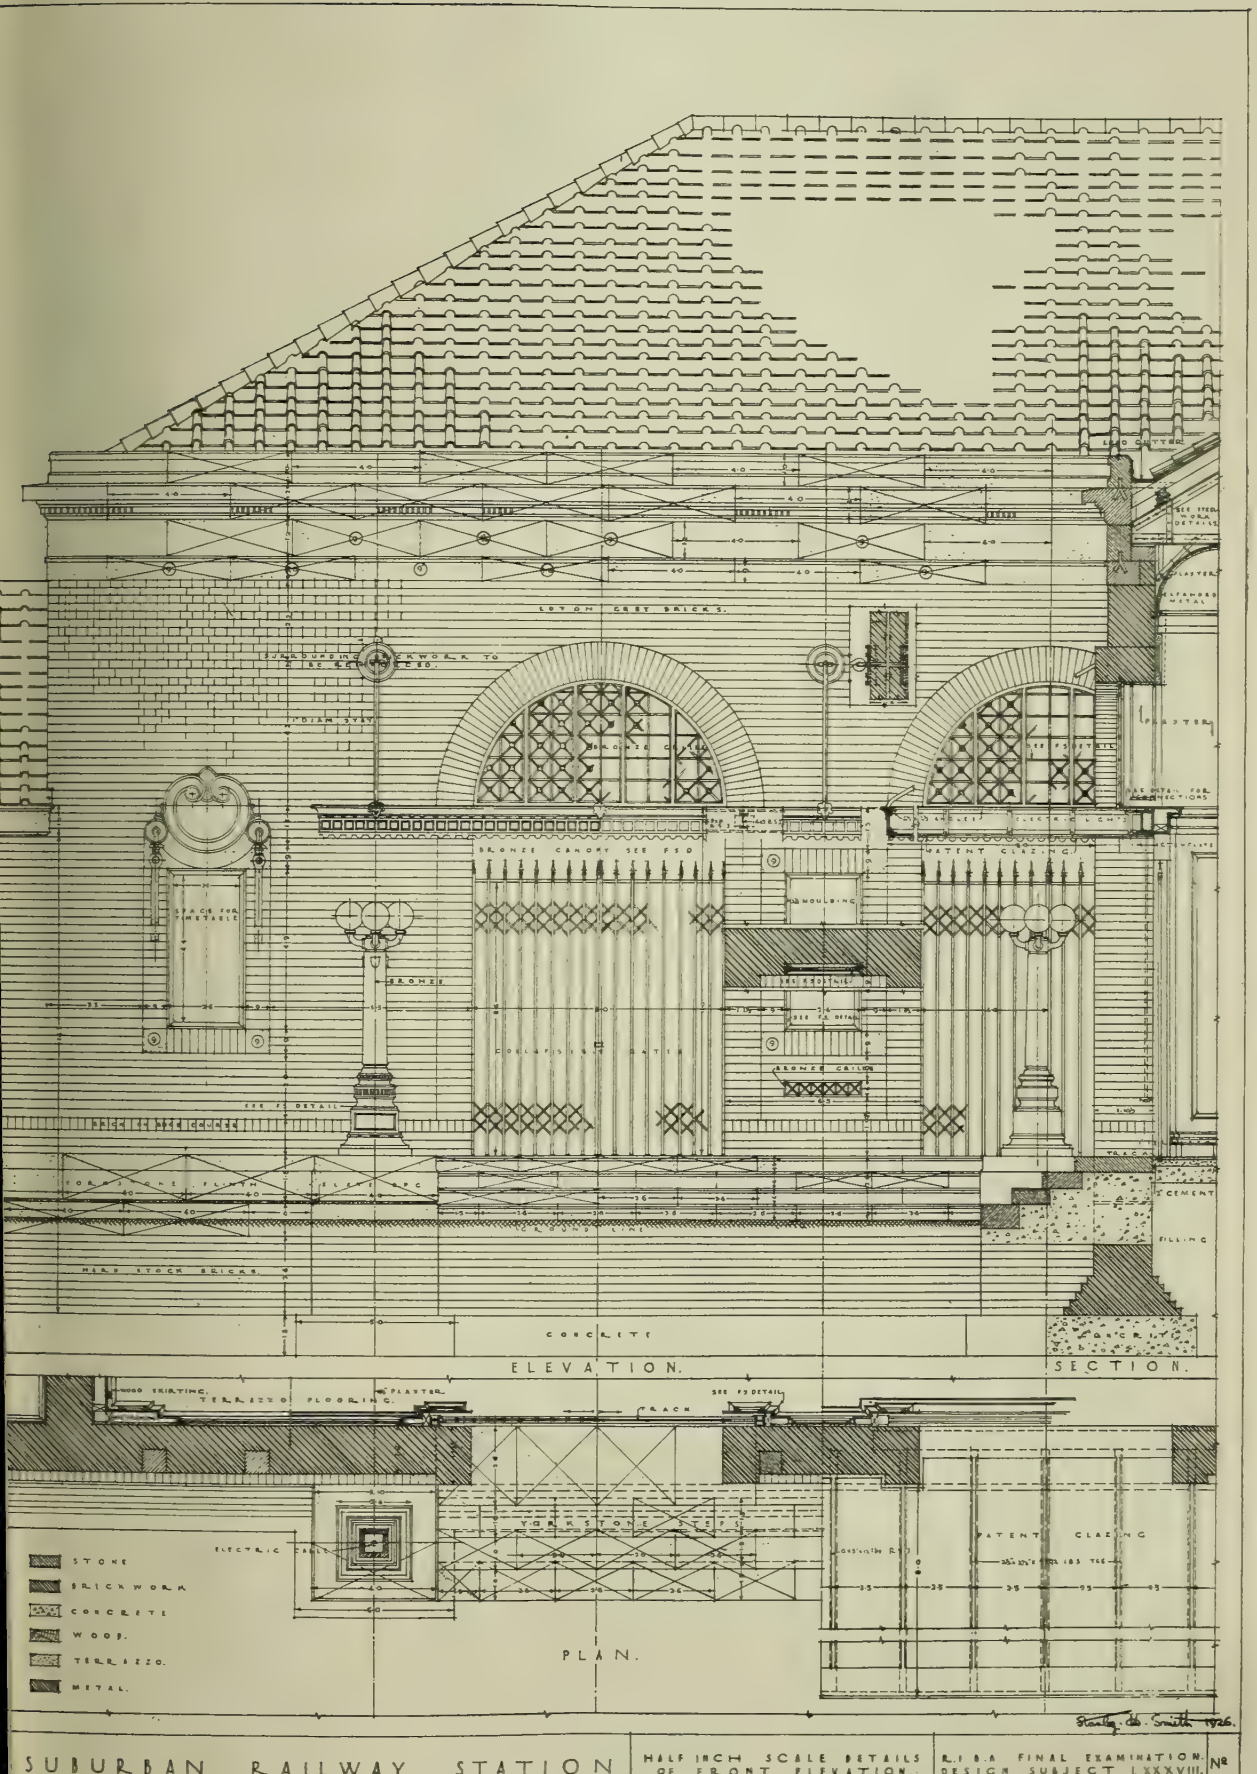
COMPETITION NEWS

Architectural Competition, Brussels.



A competition is being promoted by the Commission du Palais de Justice and the Ministère des Travaux Publics, in agreement with the Société Centrale d'Architecture de Belgique and the Société Belge des Urbanistes et Architectes Modernistes, for the lay-architectural treatment of the approa the Palais de Justice, Brussels. Th petition is open to foreigners. Plans graphs, and full particulars may be application to M. le Conservateur du P Justice, Brussels. The competition op March 15, and closes on June 15, 192 signs will be judged by a jury of a consisting of two high Government three architects, members of the Com de la Palais de Justice, one architec senting the city of Brussels, and two ar representing the Société Centrale d'Arch de Belgique.

Public Secondary School for Girls, Ly



We have received a copy of the conditi instructions to competing architects in t petition, from which we extract the f particulars :—

The Governors of the Lytham School C invite a limited number of specially architects to submit designs in competi the Public Secondary School for Girls scholars proposed to be erected on a sit parish of Lytham. Mr. Arnold T F.R.I.B.A., of 612, Royal Liver Building pool, has been appointed assessor. The ing premiums are offered :—First, £250; £150; third, £75; fourth, £50. together with a report and the envelope ing the name and address of the autho contained in one package and to be (carriage paid) to Messrs. Wilson, Davies & Earle, 54, Mosley-street, Man

The promoters desire to provide schoo ings in the first instance suitable for not l 250 day scholars, and planned with a convenient extension for an additional is suggested that the architectural char the buildings be designed to harmonise King Edward VII School, the Boys' Se School erected some years ago by the pro and which is built of red facing bricks wi land stone dressings sparingly used, an slate roofs. The coast is subject to storms of wind and sand. The design buildings and the materials used must as to withstand these storms. The cost buildings which are intended to be er the first instance, including draining an ing, means of heating, gas for cooking supply, ventilating, electric lighting only), fire extinguishing apparatus, all a tural embellishments shown on the dra part of the design and all fixed fittings, exceed the sum of £50,000.

R.I.B.A. Final Examination Testimony of Study. By Mr. S. H. Smith.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Registration of Architects: A Plea for Art, and a Question.

SIR,—Beyond all the imagined benefits that the profession of architects hope to secure from a legal monopoly of the words, "Architect," "Architecture," and "Architectural," lie the vital and mysterious interests of the art that we all profess to serve. The impetus, enthusiasm, insight, and genius which are expressed by a work of architectural art, are often spontaneous and unaccountable. "The wind bloweth where it listeth": we see its effects, "but cannot tell whence it cometh." This is true of art as of higher spiritual things. England has profited by the freedom which is a necessity to the practice of art, and her recognised position in the world of art is due more to the sporadic manifestations of genius than to the fruit of laborious and systematic organisation. Turner and Constable in painting and Alfred Stevens in sculpture may be cited; and have we not in Rennie's London and Waterloo bridges, and in a later era in the buildings at South Kensington by General Scott, *e.g.*, the School of Mines, the Museum quadrangle and courts, and in the Albert Hall, works which display very high architectural qualities and which by their freshness prove themselves to be the products of enthusiastic free-lances?

The varied revivals of Greek, Italian, Gothic, and free Renaissance which have made our architectural history now for more than a century have severally been revolts from the professional ideals and practice of the time being. Stern and often acrimonious controversy preceded the recognition of the right of any of these movements to existence as architecture fit for public work, and would doubtless have been repressed by an official board. The freedom of artistic thought and the quickness of apprehension of any vital enthusiasm, which hitherto have characterised our architectural life, were necessary elements in the appearance and development of the vigorous buildings that have placed England in the forefront of architectural progress and initiative.

What will be the ultimate effect on English architecture of the exclusion from practice of free-lances, amateurs, and those natural artists who instinctively shun the formalities of design examinations conducted on pre-conceived limited courses of study? How much narrower will not the outlook be when we are compelled to limit architecture to the work of professional architects? The deadening effect on the architectural spirit of the day, that in which we are now, of the effective limitation of architectural study to the R.I.B.A. programme, may be already seen. There is apparently now no effective, enthusiastic, study of the art outside the bondage of the schools to the "orders" and the habits of the Ecole des Beaux Arts. The originality that is inevitable to the young artist can only find expression in an uninspiring nakedness that reveals the bareness of his resources.

The condition of the art of architecture demands open windows for light and doors for the access of every wind of inspiration. This may come from an amateur or from a constructive engineer, or, one may hope, from mere builders; or from the scholarly non-professional whose studies in science or archæology incite him to conceive and execute architecture.

If architecture is to become a legalised monopoly, the profession which now honours Wren and Rennie and regards Ruskin and Morris as teachers who, in their day, were honoured and obeyed, will of necessity be narrowed in outlook and lose its claim to rank as an art welcoming inspiration from without—a true mother of all the other arts that spring from her freedom and catholicity.

This is a plea for freedom in the interest of architecture as an art. It ought not to be supposed that the promoters of registration in their zeal for protection from what they consider to be unjust competition are ignorant of what they mean to accomplish; though we may well doubt if they have understood its implications upon the status of the art.

I would venture to ask one question. What definition of "Architect" is to be added to the Bill? It is obviously necessary to its interpretation that one should be supplied. It will doubtless be asked for. The answer to this question must interest you, Sir, who have been content now for a long and honoured term to be named *The Builder*. BERESFORD PITE.

[We reply to Professor Pite's question in our leading article.—ED.]

SIR,—I am a Probationer, R.I.B.A., who has had to forego any further thought of the R.I.B.A. exams. for some considerable time owing to financial reasons. For these said reasons I prepare, from time to time, apart from my ordinary work, plans and specifications for domestic work to augment my salary. Of course I do not get a commission on these jobs, they being prepared for a fixed fee as my clients do not desire a supervising architect apart from an occasional visit.

I should be interested to know my position with regard to the above. Should I be prevented from doing this work under the proposed new act? If so, it hardly seems fair to my mind that assistants like myself who are not blessed with an abundance of this world's goods should be prevented from "making ends meet" by the only means in their power by spare time work such as I have mentioned.

I may add that I am perfectly competent to prepare the plans in a proper manner, having, for instance, just designed and prepared drawings for a £2,000 house, the design of which has been very much admired. INTERESTED.

[So far as the Registration Bill is concerned, as we understand the position, our correspondent would not be debarred from eking out his livelihood in the future as he has done in the past.—ED.]

SIR,—Was it quite fair to your readers to print only a portion of Professor Reilly's letter to *The Times*, and not to call attention to the fact that you omitted over a third of it?

In the omitted portion the Professor writes:—

> "The bungalow menace, for instance, is by itself a very real one. Yet most of the structures which are doing the damage are by persons styling themselves architects, though they may be in practice auctioneers, estate agents, contractors, or anything else. If the Bill passes it means that in a generation this menace will be largely removed."

The answer to Professor Reilly was published by you on the 4th instant in a letter from Mr. H. B. Whitefield; in it he states that the R.I.B.A. actually proposes to allow all present and future members of the Auctioneers and Estate Agents Institute, and four other non-architectural societies to have exactly the same freedom to act as architects as the members of the R.I.B.A. To obtain admission to those five societies it is not necessary to have any architectural training at the schools the Professor refers to, or elsewhere. Perhaps someone could say how many members there are in the societies I refer to; the number must exceed by many thousands the membership of the R.I.B.A.

PUPIL.

[There was no intentional unfairness on our part in giving part only of Professor Reilly's letter to *The Times*. His letter was condensed for want of space and as the point omitted was covered by our leading article we do not think our readers will complain.—ED.]

SIR,—In a town about ten miles from London comment has been made on some badly-designed houses, and I found that the plans were prepared by an estate agent's clerk. At the railway station we have two large boards, "Architect, Surveyor and Auctioneer." Now another firm has started, and in addition to the usual auctioneer's announcements of the windows letters a foot high, "tects." In the town are five or six wel members of the R.I.B.A.

CHARTERED ARCH

Limited Competitions.

SIR,—I am in agreement with "N. there is no valid reason for barring archi assistants from any competition. The mental idea in promoting a competiti obtain the best solution of the problem surely it is not logical to discriminate the practising and the salaried member profession. The only objection which c raised is lack of experience on the par assistant. This must, however, be adm be a purely hypothetical objection as as in the majority of offices carry their job in the same way as if they were in As a member of the R.I.B.A. it seem that the Institute should do more to pro interests of its salaried members, and take a strong line by not recognisin limited competitions.

A.R.

Architectural Staff Salaries.

SIR,—The part played by my Associ the endeavour to obtain fairer terms of re tion and an improved status for the architects is well known, and its cl recognition of a basic minimum salary now before the Council of the R.I.B.A. the recognition by practitioners and public companies and corporations of th ing need for such a minimum is becomi generally accepted, there is a small but in minority who steadily block the way many such minorities, it forgets nothi learns nothing.

This minority in the profession has offered no valid reason to support its opp Sometimes it volunteers an excuse fo upon the grounds that the operation of m salaries would mean a weekly financial the assistant. How that is possible on who make the excuse can show. It will not be apparent to the greater number tants who earn less than £5 10s. per w for that smaller number who earn mo already know that if the basic minimum recognised, their own experience and ab correspondingly ensure them an inc remuneration.

Private practitioners are, as a rule, e modest in publicly advertising the offered and paid to their staffs. F information possessed by my Associati subject I am not at all surprised that t Your readers, however, may be assured notices inserted by public bodies in assistants where a salary is almost u stated, reflect fairly accurately the a the salaries being paid by practitione locality. Light is shed upon the salar paid in Devon and Cornwall by the rece of a vacancy for a draughtsman at a cor salary of £130 per annum from which a of 5 per cent. is made for superannuati Devon County Council, by publicly st value it places on professoinal services, fear that it stands alone in offering su On the contrary, it is known that t salary is offered and paid by practi both Devon and Cornwall, not except such as Plymouth and Exeter.

A shocking disclosure such as this ma a good effect in opening the eyes of m tects to the fact that falling salaries themselves reach a minimum, and barrier is to be erected against the ex of the assistant by any class of empl barrier must be minimum salaries ag and recognised by the R.I.B.A. A.A.S.T.A. Further inaction is unp and must result in the hardening of op a certain small section of the profess to reap the benefit of organisation a sional protection. I may add that m tion has already lodged a protest with County Council. JOHN MITCHEL

LIFTS.

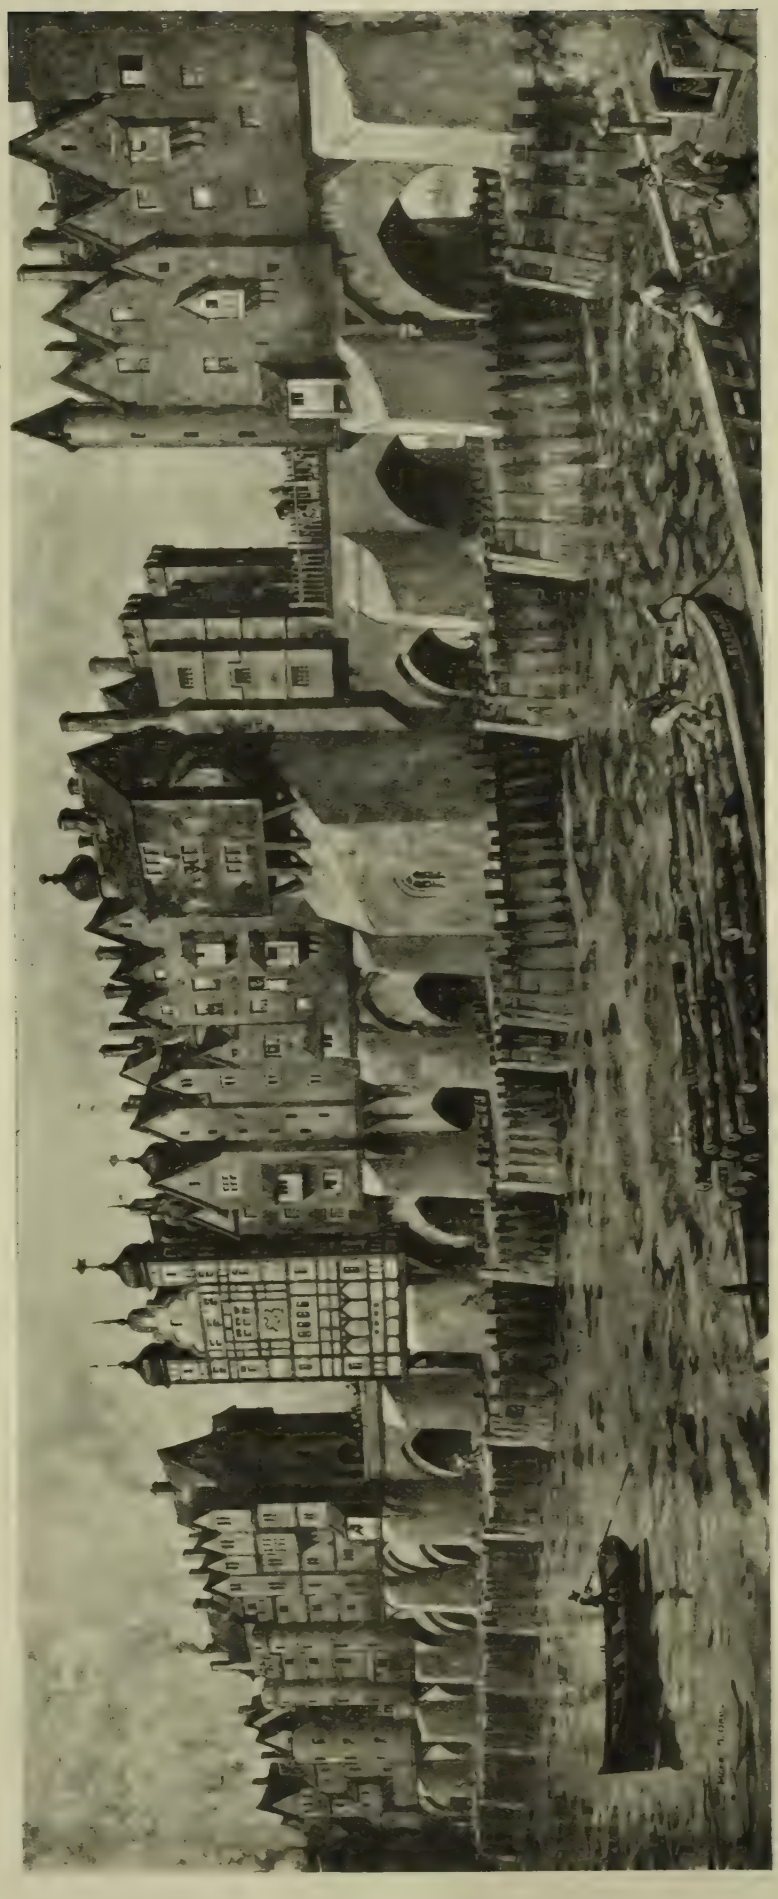
ENGER lifts in the high-class flat build-
e usually about the same size, viz.,
ft. for the car. To cope with greater
t is usual to increase the number of
ther than to make the cars larger.
the square car, 6 ft. by 6 ft.,
l, the longer shape of, say 4 ft. 6 in.
, is sometimes adopted to suit the plan
ain effect. In some instances the lift
re glazed (in small Georgian panels),
g the vestibules to be seen as they are
on the way up, the effect being very
t—particularly if these vestibules are
rnished. The car is carefully designed,
y by the architect, in metal work or
panelling—perhaps maintaining the
of the hallway; its floor is carpeted,
contains a radiator. The service lift
elephone so that the boy can answer it
time.

newest mechanical installations are
electrical, and the machinery is placed
ellar. The control is a single lever, and
nes the doors are opened by a push-
device. The automatic devices for ad-
the car to floor levels after the clutch
en released adds to the facility of the
g. The whole motion is done very
—doors open and shut quietly; the car
ith very little noise, and the only thing
s the clicking of the disconnections at
tor.

lift lobby or "elevator vestibule" is
small—about 24 sq. ft., and usually lit
lly. The law requires that this lobby
not be less than 5 ft. in minimum
ions, and not exceed in any dimen-
wice the width of the elevator shaft,"
may be without a window provided
completely "shut off by brick walls
titions of terra-cotta blocks not less
in. thick," etc.; "that doors from it
han to the lift must be fire-proof and
sing; that it be ventilated to the outer
ent flues not less than 12 in. by 12 in.;
t it be kept properly lit by electric light
gas fixture available."

lifts are operated day and night by
ed porters who are on duty in the hall.
push-button control worked by the
ts of the building is more usual for lifts
lle-class flats of about five stories.
e modern buildings no effort is made to
rate the lift with a stairway. The old
y with lower buildings to push the lift
ewhere just as if it were undesirable,
make the stairway a grand feature is
given up. The stairs are now hardly
all, so they are placed on one side out
way.

ocal authorities keep a careful record
fts and inspect them periodically.
unusual for a lift to supply more than
s on one floor.



e Lifts.—The service lift is about
he size as the passenger lift, and
have its vestibule—which is often the
ding. It contains a telephone so that
by" can take messages at all times as
work the lift. Unlike the passenger
ere possible the service lift is made
n stairs, so that tradesmen who have
r goods to several flats do not fetch
for every move.

inal allowance for the cost of cars is:—
enger Car $500 (£100)
ice Car $350 (£70)

cation.—"Lifting capacity, 2,000 lb.
ed of 300 ft. per minute. The lift
y to be placed at the bottom of the
(in the cellar)."

Old London Bridge.

From a Painting, by MR. MONRO S. ORR, for the Dining Saloon of the SS. *City of London*.

MODERN FRENCH ARCHITECTURE.

At last Monday evening's meeting of the R.I.B.A. (the President, Mr. E. Guy Dawber, in the chair) Mr. Howard Robertson, F.R.I.B.A., S.A.D.G., read a paper on this subject. The title of his paper, he said, at once brought him face to face with the unfortunate word "modern." Some people were thrilled by the very sound of the word, but to others it only suggested a term of opprobrium. He was reminded of an article by Paul Géraldy on the Paris Exhibition, in which he described the absurdities of past exhibitions, the bedrooms which forbade sleep, and the dining-rooms which took away one's appetite, all the trivial and terrible things which were grouped under the heading of "modern movement." "And so," said Géraldy, "the word 'modern,' even for those who are most favourably disposed towards the idea for which it stands, has gained such an evil reputation that artists are asking for a new label." "Perhaps," he went on, "they are right in doing so. Not long ago, one of my friends was asked to act as member of an exhibition jury, to which only 'modern' works were to be admitted, and found to his surprise that exhibits were being accepted or rejected absolutely without method or principle. Finally, in despair, he inquired of the chairman of the committee by what signs one recognised whether a work of art was modern. 'You can always recognise modern work,' replied the chairman, 'by the fact that it looks like nothing on earth.'" There was, however, to-day, as Paul Géraldy went on to say, a modern style which was well disciplined, and which certainly did look like something. It reflected ourselves. It was in no sense inimical to our traditions. It corresponded with our present-day customs and habits. It satisfied our needs. It reflected our mentality and our culture. It was modern in the same sense that we ourselves were modern: it was alive. That seemed to be a very vivid and truthful definition of what was understood by "modern" architecture in its best sense.

The speaker then quoted Monsieur Léon Jaussely, government architect, professor at the Ecole des Beaux-Arts, and a practitioner of talent, on whom devolved the stimulating task of speaking at the 1924 International Congress on Architectural Education on French architectural education in the future. "Whatever opinion we may hold of the present evolution of architecture," said Monsieur Jaussely, "it is undeniable that this evolution does exist, and that we are at present witnessing conscious or unconscious attempts to renew architectural forms and æsthetics. This renewal is more particularly noticeable in important buildings —large stores, bridges, churches, banks, cinemas, railway stations, airship sheds, etc., which we can consider as the expression of the monumental architecture of our time, and which logically should be compared with that of other epochs in order to understand the meanings of this architectural transformation." M. Jaussely then passed on to the question of the new æsthetics, in which horizontal lines predominated, curves were more and more avoided, contrast between vertical and horizontal was universal. These new æsthetics were further characterised by the simplification of the articulation and its reduction to a small number of elements, the search for enveloping form, and general colour in place of detailed moulding; points of decoration were sought for their contrast value, but were sparsely distributed and stood out against a bare background; the appreciation of volume and masses was exact, the outlines were severe. The sobriety of these æsthetics excluded all mannerism. "Let us recapitulate (continued M. Jaussely): simple composition and lines, of a real and severe classicism, but with different and reverse proportions; sober architectural treatment, the facing materials are rich, even precious—or appearing such. . . . Particularly successful as modern works must be considered these engineering works of great frankness where the very striking appearance is due to the effect produced by combinations of purely constructive forms without any ornament."

While an architecture of this modern type was being evolved in France by a certain section of architects, continued the speaker, there was also a considerable group which had not departed from, he would not say the classic tradition, but from what was known familiarly as the "pompier." It was an untranslatable word, but applied to architecture it implied pompous commonplaces, a complete absence of original thought, façades which were not so much designed as assembled out of stock familiar motives. It was architecture in which the designer originated only the framework of his building, and for his surface dressing drew upon a recognised vocabulary of approved elements. The façades of the Grand Palais in the Champs Elysées, whatever fine qualities they might have, provided an excellent example of the "pompier." Even the Petit Palais, in certain aspects, was the product of the academic formula.

As a point of departure from which to consider modern French architecture, he would like to go back fifty years, and illustrate a building which to his mind embodied to an extraordinary degree the virtues and vices which had been peculiar to French architecture, and for both of which the tradition of teaching at the French National School had been very largely responsible. That building was the Paris Opéra House, by Charles Garnier, completed in 1875. The Opéra House was a striking example of the working of a marvellously efficient architectural formula, the formula of fine plan production, one which had been handed down from generation to generation of French teaching. More than any other nation had France inherited the planning genius of Imperial Rome. The lavish spaces, the elegant and stately balance of ordered rhythm, the grandiose sequences and climaxes of Roman planning, were all exemplified in Garnier's plan. The Opéra House plan heralded, however, the beginnings of a war between the old-fashioned plan forms of solid masses and the lighter shapes which would logically result from modern methods of construction. The apparent solidity of the plan points of the Opéra was in some cases the result of building out to achieve effects which would be more legitimate in a building of mass materials. The plan represented not so much an effort to express the modern resources of construction utilised in the Opéra, as the desire to apply them to preconceived forms. The resultant elevational architecture, produced in faithful obedience to the formulæ for composition in the grand manner, was nevertheless devoid of real vitality.

As long ago as 1860 Viollet le Duc was prophesying the advent of a new architecture dominated by steel and iron, and Labrouste was applying the new methods to the Library of Sainte Geneviève, and to the reading room in the Bibliothèque Nationale. But it was not till about 1878 that there was evident a kind of definite reaction against the trad academic architecture leading to an out engineering structures such as the Galé Machines, no longer extant, and later Eiffel Tower, which suggested the poss of a modern architectural renaissance b the sudden removal of those structural tions out of which the old solid forms o ing had largely arisen. It had taken time for the accepted architectural syst proportion and expression to adapt the to this new freedom, and at the prese we could only point to portents and p of an architecture which would be both and beautiful. The earlier efforts in as elsewhere, were full of compromise Grand Palais was competent, but it hybrid. So also was the Gare d'Orsay, ing which depended on steel but which an immense ponderous façade belying grace of the metal vaults within. In th category was the Pont Alexandre, bu the 1900 exhibition, an engineering st decorated by architects. All these had but could lay no claim to indicating a s More interesting and sincere, but mar the triviality of its detail, was the M de la Samaritaine, where the steel skele ceived a frank adornment. Here the r lay in the emphasis of the detail of st rather than in the expression of its spi was graceful strength of form that one to see expressed, rather than the bon vertebræ, however skilfully adorned. stage in the modern French movement the experiments and heart-searchings were still the order of the day for the who refused the solace of complacency found various lines of approaching th cult problem of a modern architectural sion, the two main alternatives being, fi expression of the modern constructio materials, and, secondly, a more abstr plication and suggestion of modern p not so much through direct expression character of form and that general atm to which detail and decoration so large tributed.

Real pioneers were rare, and there w in France who had made a definite c tion to architectural progress who h thered design in the same sense as mediæval builders with their ston vaults. Amongst the small and distin band who would ultimately be entitled a niche in modern architectural his would like particularly to mention the Perret. Their work constituted, in his probably the most important individu in modern development of the past fift not so much from the standpoint of b erected as from that of experiment and tion. The Perrets, architects and both, trained in the Ecole des Beaux-A in the school of a varied practice, were qualified; but in addition they had the gift of imagination, and were applyin the study of the most significant of materials, reinforced concrete. The theories were quite clear. They unders material, its possibilities, and its lim They saw the future of reinforced not as massive pre-cast blocks or i plastic shapes, but as structural posts placed, like Gothic piers, at the point and, like them, permitting the lightes or infillings between them. This system of their earliest best-known v Champs Elysées theatre, the plan was so expressive of a modern light tion. In a recent competition for a hurch to Jeanne d'Arc the Perrets sub- a design on the principle of these two s. There was no time to criticise it, ntion must be made of the expressive ith its great tower piers and light walls. It was wonderfully clear and and, like all the Perrets' work, repre- design well organised.

onumental buildings there had certainly dearth of opportunity, but in commer- ork the modern spirit had several s to its credit. The new annex to the arché had that suave beauty of plan hich, in new work as well as old, instinctive with the French. Its ex- was both sensible and dignified, and gly detailed. The interior escaped the remes of our own commercial architec- mugness or coarseness, and was ob- the work of artists who were craftsmen e versa.

French apartment house had developed ical expression. There were clean, types, façades in which the main pre- ion was hygiene and commodity, and were the apartments de luxe, whose s revealed a neat and efficient ism. Interesting was the stepped apart- uilding in the rue Varin, in which each had his outside terrace, a type of con- n possible only by modern methods. in private work that we found the variety of architectural experiment. he semi-traditional we passed to the nctional, and from that to the tempera- But these were the dwellings of the luxurious type, and there still remained striking French development, that of nomic dwelling, as exemplified by the such men as Le Corbusier and Jean- André Lurçat, and a small group of ntemporaries.

heories of Le Corbusier were full of his books, "Vers une Architecture," misine," "L'Art Décoratif d'aujour- were notable contributions to architec- ought. In the realm of æsthetics, Le r believed that architects had lost the of geometric form, of the modelling ce, of the value of light. He urged a o these basic essentials. Practically nomically, he condemned the wasteful- our building methods, the lack of isation, the complication of our s trades, the lack of hygiene in our , not only in units but in groups. At Exhibition, the Pavilion by Le Cor- nd Jeanneret for that group of ts calling themselves "L'Esprit " contained the nucleus of the dwelling unit to be built either de- r in multiple groups, on a sort of ystem. In an apartment house built cheme each dwelling would have its n-air garden, two stories high, and l by a continuous air shaft. On a oasis still, Le Corbusier foresaw the ction of cities with huge blocks of tall sort of gigantic service flats, sur- by wide open spaces, and served by eries at different levels. The ill- ad congested city was to be grouped y units surrounded by light and air. sier illustrated a central area of Paris on this principle, and the effect was impressive.

Discussion.

or F. S. Granger, proposing a vote of Mr. Robertson, said that, after seeing he illustrations shown on the screen, eminded of Ruskin's criticism of the Crystal Palace. The design of such buildings as the Crystal Palace and the Eiffel Tower was really very modern. He admired the simplification of some of the houses which the lecturer had shown, and it occurred to him that architects might make very effective use of coloured light in connection with their buildings at night.

Mr. Fernand Billerey, seconding the motion, said he was not so convinced as some were of the necessity for a new architectural language. Were not the modernists merely replacing one formula by another? Not long ago the formula was "columns, architrave, and pediment"; now the correct formula seemed to be a blank wall, a large opening with a wide architrave, a stepped coping, and you were safe.

Major Longden referred at some length to the aims and achievements of the Paris Exhibition, where, he said, architects had built to give the craftsman an opportunity to show his skill, and in this respect the exhibition was an undoubted success.

Captain B. S. Townroe said that in designing colliery housing schemes in France, French architects consulted the wishes of the miners themselves. Not so in England. He knew of a new colliery village in Kent where the architects had planned the bathrooms on the first floor instead of downstairs. Concluding, the speaker referred to the project of a British Hostel for three hundred students at the Cité Universitaire, Paris, which he hoped would be designed by a member of that Institute, and show what British architects could do in France.

Mr. H. S. Goodhart-Rendel said he felt that much of what they had seen on the screen was not architecture at all—it was mere eccentricity—eccentricity that had to be given time to become absorbed before it was fit to be seen. For all that, we owed a great debt of gratitude to the bold and one-sided people who were making the experiments.

Professor C. H. Reilly said that some of the work shown seemed to be taken largely from the Germans. It reminded him of Eric Mendellsohn. There was the placing of voids where we should put supports—windows at corners, and other eccentricities that seemed to be copied from Germany. We could gain from what was being done on the Continent without having to make these buildings ourselves, and no doubt we should absorb the best of modern French and German work.

Mr. H. M. Fletcher said that, although style and detail might change, architecture itself did not change—it observed the eternal laws of structure. M. Perret, he felt, expressed the plan in his exteriors; but M. Le Corbusier did not support anything on anything. The work of the latter was experimental work from which people might learn what to avoid.

The President having put the vote of thanks to the meeting, Mr. Robertson briefly replied to points raised in the discussion.

Registration as Probationer R.I.B.A.

Attention is called to the fact that the Council of the R.I.B.A. has decided that after December 31, 1928, no one shall be registered as a Probationer unless that person has passed one of the recognised public examinations in the required subjects. A list of the examinations recognised may be obtained free at the R.I.B.A.

Obituary.

At last Monday evening's meeting of the R.I.B.A. the death was announced with deep regret of the following members:—

George Sydney Jones, elected Associate 1891, Fellow 1926.

George Sutherland, elected Associate 1894, Fellow 1923.

Percy Montagu Beesley, transferred to Licentiateship 1926.

Thomas George Williams, transferred to Licentiateship 1925.

MANCHESTER GRAMMAR SCHOOL, FALLOWFIELD

We reproduce in this issue plans and a perspective drawing of the proposed new buildings of the Manchester Grammar School which are to be erected at Fallowfield from the designs of Dr. Percy Scott Worthington and Mr. Francis Jones, V.-P. and F.R.I.B.A. The buildings are designed for the teaching of about 900 boys. They will be set upon an ample site and in the grounds there will be room for eight football matches to proceed at the same time, and there is provision also for cricket, tennis, fives, etc. There will be gardens, too, and pleasant broad walks. As many as possible of the trees now on the site will be left where they stand.

The main front of the new buildings will be towards Old Hall-lane, and the length of the property here is roughly a quarter of a mile. The buildings will be of red brick, like the Ashburne Hall Hostel not far away. The drive will lead to an archway. On the right of the archway will be the Paton memorial library, and on the left the museum. Through the archway access will be gained to the main teaching block, built round a quadrangle. All the buildings around this quadrangle will be in two stories; those to the right of it in one story. A little to the north, overlooking Birch Fields, will be the great hall, 110 ft. long by 45 ft. wide. The hall will have a gallery and an organ. A fine science block stands apart from the main teaching block, but is connected with it by a corridor. The dining-hall (about 126 ft. by 40 ft.), the gymnasium, workshops, and swimming bath also stand apart from the main teaching block

The position of the administrative offices and other accommodation may be studied from the plan. It is proposed to erect a statue of Hugh Oldham, the founder, filling the end of a fine vista on the school approach from its north side—that is, from the direction of Dickenson-road. As the plans stand at present, 39 classrooms have been provided for. A sports pavilion will be built in the playing-fields.

SOUTH WALES INSTITUTE OF ARCHITECTS

The Council of this Institute has decided to hold, from May 9 to 14, an exhibition of Photographs and Models of Buildings carried out during recent years by members of the South Wales Institute of Architects. The Exhibition Room in the entrance of the Cardiff City Hall has been reserved for this purpose. A sub-committee, consisting of Messrs. J. Herbert Jones (Swansea), T. Alwyn Lloyd, W. S. Purchon, Percy Thomas and C. F. Ward (President, Newport) has been appointed to make the arrangements, and the Council hope that the exhibition will be as representative as possible. The main object is to interest the general public in modern architecture. In order to give the Committee some idea of the space required, members intending to submit material are requested to fill up a form, giving the number, brief particulars and size of photographs. Photographs of small buildings, houses and domestic work are desired as well as those of large buildings, and interior as well as exterior views can be sent.

A prize of £2 2s. will be offered for the best poster submitted by any member of the Institute in connection with the exhibition, and 10s. 6d. each will be paid for any other poster which may be used in advertising the exhibition. The posters will be judged by the sub-committee which is dealing with the exhibition. They should be sent in to Mr. T. Alwyn Lloyd, F.R.I.B.A., 6, Cathedral-road, Cardiff, not later than 11 a.m. on Saturday, April 23, and a *nom de plume* should be placed on the back.

Proposed Church at Erode, S. India.

This mission church, in a country town in South India, has been designed to accommodate a congregation composed of three elements—the boys and the girls of the mission schools and the adult members in the district. Galleries will be added when required over the end bays of each wing, approached by the two circular staircases. Special circumstances suggested the adoption of elevations of a Moghul type, which, however, is not indigenous to Southern India. The architects are Messrs. Reginald Dann, M.T.P.I., and Laurence Angus, M.A., A.R.I.B.A., of Madras and London.

Extension to Acton Public Baths.

This new building has been erected upon an irregular corner site at the north end of the existing swimming bath, with frontages to High-street and Acton-lane. The main entrance on the principal elevation to High-street gives access through the waiting and crush hall to the swimming bath, which during the winter season is used for social functions. Commodious cloak rooms and lavatories are provided on the ground floor. The accommodation on the first floor consists of an assembly room with ante room adjoining. The walls are panelled with Oregon pine to a height of 4 ft. The second floor will be used as offices. The main staircase and the floor of the waiting hall are finished with marble terrazzo with marble terrazzo dado. The building is fire resisting throughout, and the floors and staircases are in reinforced concrete.

The general contractors were Messrs. J. Woollard & Sons, Ltd., of Acton, and the following were sub-contractors:—H. J. Levi, Shepherd's Bush, Portland stone; Dorman Long & Co., Ltd., steelwork; Burke & Co., marble terrazzo; Laurence A. Turner, F.S.A., stone carving; James Walker, decorative plaster; Bostwick Gate Co., Ltd., balustrades and Bostwick gates; Parker, Winder & Achurch, Ltd., ironmongery and bronze fittings; The London Plenum Heating Co., hot water heating installation; Shanks & Co., Ltd., sanitary goods and fittings; John Edgington & Co., Ltd., flagstaff; R. A. Taylor, Acton, electric lighting; The Wilfley Co., Ltd., composition floor.

The building was designed and carried out by Mr. W. Leicester, L.R.I.B.A., architectural assistant, under the direction of the Borough Engineer, Mr. W. G. Cross, Assoc.M.Inst.C.E. The photographs were taken by Mr. H. Hunt, of Acton.

School, Mason's Hill, Bromley, Kent.

This school was completed some time ago from the designs of Mr. C. H. B. Quennell, F.R.I.B.A. The site was a peculiarly long and narrow one and settled the shape of the plan. The builders were Messrs. R. Cook & Sons, of Crawley, Sussex, and the following were sub-contractors:—Messrs. Norris, of Erith, bricks; Messrs. Mercer, of Ashford, tiles; Messrs. C. Kite & Co., ventilation; Messrs. Weeks, Bromley, heating; Mr. Paul Woodroffe, Campden, Glos., glass for hall.

R.I.B.A. Final Examination Testimony.

This drawing shows a detailed portion of a station situated in a suburb served by an electric railway. Luton grey bricks are used with light red brick arches and features, sandstone being employed for cornice and dressings. The drawing is by Mr. S. H. Smith.

Old London Bridge.

Our reproduction is from a photograph of an oil painting of Old London Bridge by Mr. Monro S. Orr, made for the dining saloon of the s.s. "City of London." The drawing is reproduced by permission of the artist and Messrs. George Smith & Sons, managers of the Ellerman City Line, Glasgow. The original is 7 ft. by 3 ft. The photograph is by Messrs. T. & R. Annan & Sons, of Glasgow.

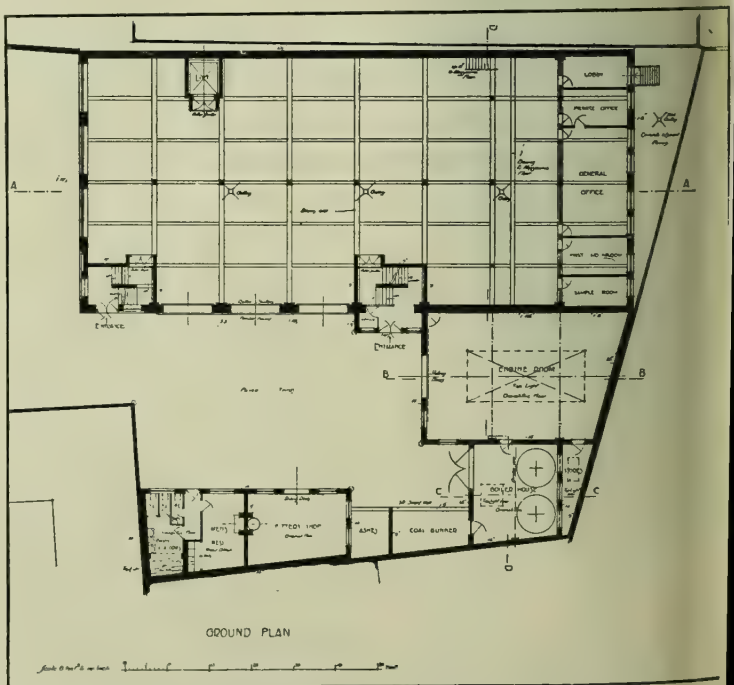
Bottling Warehouse, Putney.

This warehouse has been erected for Messrs. Mann, Crossman & Paulin, Ltd., at Brandon's Putney Brewery from the designs of Mr. C. Hamilton Simpson, F.R.I.B.A., of 83, Buckingham Palace-road, S.W. 1. The building is of brick faced with stocks and blue bricks to match the existing brewery. The materials used are fire resisting throughout, and all steelwork is encased in cement concrete. A feature of the building is an underground tunnel, 135 ft. long, which forms the connecting link between the bottling store and the main brewery, and passes below a main 40 ft. thoroughfare. Through this tunnel pass all the service pipes from the brewery, supplying the bottling department by gravitation.

The quantities were prepared by Mr. A. J. H. Sprague, F.S.I., 104, High Holborn, W.C. 1. The general contractors were Messrs. Geo. Parker & Sons, Ltd., Peckham, S.E. 15, and the following were s tractors:—Lindsay's Paddington Iron Ltd., constructional steelwork; Willi Williams, Ltd., metal casements; Asphalte Paving Co., Ltd., asphalt gineering Works (Electrical & G Ltd., electrical work and li Pickerings, Ltd., electric lift; S Granolithic Co., Ltd., granolithic pavi Luxfer Co., lanterns and patent glazin Gibbons, Ltd., wrot ironwork; J. roller shutters and fireproof doors; Ma Platt, 7,000 gal. standard tank; T Metal Equipment Co., Ltd., steel John Bolding & Sons, Ltd., sanitary f Thos. Parsons & Sons, paint.

Ingham Infirmary, Westoe, South S

The extensions to this building, whic carried out as a town's War Memoria prise extensions to the existing ch ward and the building of a verandah the whole of the south side. The ve is worthy of note, being arranged s it can be opened to the south i weather; folding screens enclose the of the front, or half as required, the being filled in with fine woven copper to allow the air to circulate, at the sam keeping out inclement weather. The building was designed by Mr. R. J. J of Newcastle, and the contractors f new extensions were Messrs. James Y Co., of South Shields. The glass roof verandah was executed by Messrs. M on their patent system. The screens verandah front were carried out by the of England School Furnishing Co., L Darlington. The verandah is heated i tion to the ward.



The architects were Messrs. J. H. & Son, FF.R.I.B.A

PARTHENON STUDIES

By W. R. LETHABY.

IE ELGIN EXPEDITION—II (*conclusion*).

LTOGETHER the Elgin expedition accom-ied a great work. It was the first of the ern scientific explorations of ancient sites. In Hunt wrote in regard to the collections : e project that has been suggested to his Lord- of forming his collection of original marbles, vell as the models, casts, drawings, and s, into a public exhibition at London, has e us endeavour to recollect the principal cts it contains. . . . Every detail of the ple has been moulded; the Temple has planned and its restorations made by or Balestra. M. Lusieri's magic pencil will I trust, have finished the picturesque s, and the Calmuc, Theodore [Feodor], who pleted his drawings of the Sculpture with so h truth has made a restored copy of the p on the western pediment, and on the blature in the grand elevations."

thering the collection, shipping the great es and exhibiting them in London, was a endous effort. Lord Elgin acquired a house ne bottom of Park Lane and erected a tem-ry museum in the courtyard. Haydon e of this building as a damp shed, but he d that the sculptures were ranged within and reach, an advantage which they have ly enjoyed since, for in the Museum they ll placed too high. A drawing reproduced Mr. Arthur Smith shows that the shed was and well lighted. In Wood's collection of rs at the Museum (Add. 22,152–3) I find te :—

It is but justice here to state that the ic have been admitted to the noble Museum a liberality and freedom truly becoming tron of the Arts."

hen thus exhibited in 1808, the marbles sioned a storm of controversy as to whether should be purchased by the Nation. In the Government offered £30,000 for the e collection, but this was not taken. Lord n seems to have been generous in intention, ough an editorial note in the *Gentleman's azine*, 1815, blamed him for not having pted "a very large sum offered by Mr. ival [for the Government] that these les might constitute a public school of art; these terms were rejected."

February, 1816, Lord Elgin presented ition to Parliament that his collection should urchased on behalf of the public. A com-ee of enquiry was set up, and it was recom-led that £35,000, an advance of £5,000 on sum formerly suggested, should be offered, this was accepted. The Society of Dilet- offered him membership in 1831, but he ned, writing in reply, "The impulses which ne to the exertions I made in Greece were ly for the purpose of securing to Great in, and through it to Europe in general, nost effectual possible knowledge and means proving, by the excellence of Grecian art ulpture and Architecture. My success to ast extent it was effected will never cease a matter of the utmost gratification to

e story of the reception of the marbles is ly told as if we were a duller people than howed ourselves to be. Michaelis says: y a few grasped the significance of this tion and no one with deeper conviction the young painter, Haydon. . . . True ciation came first from the foreigner— ting Haydon and a few of his friends. . . . Greek gods remained almost without nition in the foggy city by the Thames. Prince Louis of Bavaria came in 1814, and o impressed with the marbles as to deposit n for their purchase. Visconti soon fol-. He was the first to devote serious to that collection" (*A Century of Dis-es*). Mr. Lionel Cust, in his account of y of Dilettanti, speaks of "the campaign d on by Haydon almost single-handed t the whole weight of opposition."

y the fact is that the marbles were eagerly d by the painters and sculptors of the time and all of them who gave evidence in 1816, including Sir Benjamin West, P.R.A., Lawrence and Flaxman, were unanimous in high appreciation. Haydon himself says: "Lawrence, Westmacott, West, Nollekens, and Chantrey, did themselves much honour." Haydon's part in the dispute may be found recorded in his recently re-published autobiography, and it has been fully told by Michaelis. I want here to bring out the remarkable understanding and advocacy of the old man, Benjamin West, who must have studied the sculptures from the time when they were first shown. In January, 1809, he wrote an enthusiastic report on them as a letter to Lord Elgin, and in the *Pursuits* (1811) we are told that it was written by the President of the R.A. "after passing some months in the daily study of the marbles."

"I have found in this Collection so much excellence and a variety so magnificent and boundless that every branch of the fine arts cannot fail to acquire something. Your Lordship by bringing these treasures to London has founded a new Athens. . . . I sincerely hope that these examples of art will be a means of enlightening the public mind and correcting the national taste. Your Lordship must be remembered as a benefactor who has conferred obligations on a nation and as having rescued these unrivalled works of genius. . . I perceived in your marbles points of excellence as appropriate to painting as to sculpture. The points are the visible signs of that internal life with which the animal creation is endowed. Who can look at the horse's head without observing the animation of life? Would one not suppose that some magic power had turned the head into stone when the horse was in all the energies of its nature. We feel when we view the young equestrian Athenians that they and their horses existed as we see them at the instant they were converted into marble."

At the enquiry of 1816, West being asked if he was acquainted with the Collection, answered: "I AM—having drawn the most distinguished of them the size of the original marbles." As to their class, he valued them, "In the first of dignified art, brought out of nature by unerring truths, and not on mechanical principles to form systematic characters and systematic art." "One mind pervades the whole, but not one hand has executed them. . . . the equestrian groups in the frieze are without example in the energies of the horses, the grace of the youths, and the life in all. The whole does not appear to be the efforts of the hand, but of some magic power which brought the marble into life. . . . The energy is without an example in art, except two works of Raphael. . . . The same hand which produced this frieze was capable of producing the metopes and the large figures. The Apollo of the Belvidere, the Torso, and the Laocoon are systematic art; Theseus and the Ilissus [of the Parthenon] stand supreme in art. . . . The highest importance in art that ever presented itself in this country, not only in professional studies, but to inform the public mind in what is dignified in art. . . . In those marbles is seen the source [*i.e.*, nature] from whence they grew, and that source is now as open as when they were raised into being, because it came from nature, which is eternal. . . . To such works which have appeared but once in the world, I cannot set any pecuniary value in competition with the mental powers which are to be seen. . . . The close imitation of nature in these figures adds an excellence which words are incapable of describing but sensibility feels. . . . I have never see any sculpture so decidedly the works of the greatest masters."

Asked what he thought of the sculptures from Phygalia (Bassae) and the Townley Collection, he replied: "They are an acquisition in this country, although inferior to those from the temple of Minerva. . . . In the refinement of what is transcendent in art, as in the Theseus and the Ilissus, I cannot put any nominal value. I judge of the Elgin Marbles from their purity and prominence in art over all others I have ever seen, and from their truth and intellectual power; and I give them the preference to the Phygalian and Townley Collection, most of which is systematic art."*

All this is remarkable as the considered written judgment of an old man of seventy-eight, the President of the Academy. It reveals that West belonged to the thinkers of the time and made the great distinction between art based on nature and truth expressed with intellectual power, and formal or "systematic art." The thought is very much that of Blake or Wordsworth and the discussions of this time must have deeply influenced Keats, who wrote to a friend, "It may be interesting to you to pick out some lines from Hyperion and put a mark to the false beauty proceeding from art, and one to the true voice of feeling."

Haydon was only twenty-two when he first saw the marbles. Later, speaking of Fuselis' action in regard to them, he says: "He did not behave with the same grandeur of soul that West did. He, too, was in the decline of life; he, too, used to talk of art above nature, and of the beau-ideal; but he nobly acknowledged that he knew nothing until he saw the marbles, and bowed his venerable head before them as if in reverence of their majesty. . . . While I was drawing there West came in and said, 'Hah, hah! Mr. Haydon, *you* are admitted, are you? I hope you and I can keep a secret."†

Haydon says: "I drew the marbles ten, fourteen, and fifteen hours at a time, staying often till twelve at night, holding a candle and my board in one hand and drawing with the other." Many of these drawings are now preserved in the Print Room of the Museum.

In 1816 Haydon and Keats became friends. The poet was carried along in the strong tide of admiration for the wonderful works of Greece. The title of his poem "Hyperion" was the name by which at this time the Helios of the East Pediment was known. Sir Sidney Colvin suggests that the "Ode to Grecian Urn" owes something to the marbles, and it may not be doubted that the poet's genius was quickened by these revealing works of art.

Lord Elgin, as is clear from the *Pursuits in Greece*, had projected a big descriptive work on his expedition. Wilkins (1816) says: "Lord Elgin's intentions of publishing a complete and splendid work from the drawings made on the spot has been abandoned." In *Pursuits in Greece* some excellent suggestions, which are probably Elgin's, as to the arrangement of the sculptures in a museum are made. The originals should be shown where they might easily be seen, while casts might be "placed in an elevation." Restorations should be "executed on casts but by no means on the originals." It would have been better if this advice had been followed from the first; some day it will have to be reconsidered. He further proposed the study of athletic exercises to sculptors. "It may not be too sanguine to hope that prodigal as Nature is in the perfections of the human figure, animating as are the instances of patriotism, heroic actions, and private virtues deserving commemoration, sculpture may soon be revived in England to rival the productions of Greece."

Visconti was invited here by Lord Elgin, and published an account of the marbles. He accepted Quatremère's demonstration that the subject of the eastern pediment was the Birth of Athena, and that of the west her dispute with Poseidon. It had been thought that these subjects were disposed the other way about, and this was the cause of confusion which has not yet been fully put right. Haydon and others called the reclining male of the east pediment Theseus, a suitable name when the scene was thought to be Athens, but it should have disappeared with the correction of the subject. The authorities at the Museum,

*It is curious how persistent is the supposition that Bassae is nearly contemporary with the Parthenon. I have little doubt that it is more than a century later notwithstanding the legend that it was by the same architect.

†In a late retrospect Haydon said: "Mr. West asserted that he was the first artist to study the Marbles, though he knew I had been drawing them long before he came."

however, while recognising the misnomer, appear to think it too much trouble to shake it off.

Visconti seems to have been the first to call the noble pair of female figures in the east pediment Demeter and Persephone, and he also identified Demeter and Athena of the eastern frieze. Unfortunately he took a wrong turning in assigning Iris of the west gable to the eastern front. In the list of marbles given by Visconti himself, which must have been prepared from the Elgin records, this torso, then 13, is classed with those the places of which were not ascertained. In the text, however, he says it was found lying on the eastern cornice. A century had to pass before this mistake was fully corrected. (See *Sculptures of the Parthenon*, 1910.)

The Marbles were transferred to the British Museum in 1816, and in 1817 they were shown in temporary galleries.* The collection as first housed was painted by A. Archer in 1819. The picture is now exhibited in the Elgin Gallery. In front is seated the aged Benjamin West, and in the background Haydon, and it seems quite right that they should so be represented. This painting, by a little regarded artist, as craftsmanship is one of the most perfect pictures ever wrought in England. It is another evidence of the excitement and enlightenment of the moment. This same heightening of faculty is shown by a remarkable book which appeared at this time.

In 1818 Richard Lawrence published, "after three years close study of these beautiful relics," what is still in many respects the best appreciation of them, together with some remarkably sound general thoughts on art. Lawrence was a veterinary surgeon who was drawn to the marbles by the horses and riders represented on them. His book is never quoted, but he must have been a man of great original power to have seen what manner of stones these were, and to have come to such sound and just views of the purpose and method of art. Of all who have written on the marvellous marbles Pheidias, I think, might prefer to read the praise of this man who understood horses.

"The Elgin marbles would have stood as unrivalled in perfection had they been executed yesterday as they now do after the awful lapse of two thousand years. The prevailing practice of estimating works of art by their antiquity can have no other effect than that of paralysing the efforts of British genius and infusing a contemptuous indifference towards the production of modern times. Hence has arisen that jargon under the guise of scientific profundity, throwing the veil of mystery over principles which are naturally clear.† It is the peculiar excellence of these matchless relics that they are so faithful to nature that at first view they fail to strike the eye. Truth, however, prevails; repeated inspection unfolds new beauties in these transcendent masterpieces. . . . Unrivalled either in ancient or modern times, and coeval with those great philosophers and poets whose admirable works have stood the test of ages, the marbles present evidence uncontrovertible that the records of Athenian greatness were neither false in substance nor exaggerated in detail. The Apollo Belvidere exhibits dignity, but the stony character of the body renders that figure deficient in truth and nature. . . . Fidelity to nature in the works of the Greeks has been attributed to their opportunities of beholding the naked figure; but this could never have enabled them to attain such perfection without anatomy and physiology. We are accustomed to see naked horses and dogs, still we scarcely ever find these animals represented with correctness except by those who make that their peculiar study. Greek artists considered no one part inferior to another, for we find the same truth in their horses as in their men. . . .

"The meridian of life had passed ere these precious remains first gratified the author's eye and confirmed the alienation of his thoughts from every other pursuit. Hence little remains but regret that the ability to profit by those admirable examples is abridged by circumstances over which there is no control."

All this is quite remarkable both in thinking and expression; it is little like what we have been told of reception of the marbles by the dull people on the foggy Thames. The theory of the relation of art to nature is again that of West and Keats and Ruskin; it was evidently a doctrine of the time. I should like to quote all that this trained observer saw in the horses, but can only pick out a few sentences: "The shape of the hoofs corresponds so perfectly with the rest of the animal as to give the character which is peculiar to the blood horse of this country of which the Arabian was the parent stock. The action of the rider in placing his hand over the horse's head is happily expressed and is the method which the jockeys of the present practice by taking hold of the horse's ear to prevent him from rising out of the trot into the gallop" (p. 27).

"A hard pulling horse grinding the bit by the lateral motion of the lower jaw. The rider is shortening his reins by drawing them through the left hand with the right, which is in consequence raised and thrown behind his head. The horse describes what is called the croupade, having sprung with all his legs in the air" (p. 28).

Metope 6: "Centaur nearly subdued is well expressed by his tail tucked inwards as well as by the position of the hinder legs, which denotes the moment of losing equilibrium."

Metope 7: "Yields to nothing in the collection. The superior and posterior parts of the shoulders are executed with astonishing fidelity. These parts, however, are unfortunately out of reach. The left hand and arm of the Centaur are raised, the hand still remaining attached to the head."

Lawrence was the first to publish restorations of some of the frieze slabs, and he noticed that there was "a manifest difference in style and execution" amongst the reliefs. Further, he observed two small, but important points regarding the group of gods in the eastern frieze. The two figures on the left hand called by Visconti Castor and Pollux, could not be rightly so named because they were obviously *not twins*. Another male figure seated close by supported his foot against the *end of a stick*. Such remarks by a London veterinary surgeon were, of course, ignored in official publications, although they seem to have helped towards the identification of the figures by Leake. This scholar, in 1841, observed that Visconti had not noticed "the remains of the spear"; again of the figures supposed to have been Castor and Pollux he said "the two figures are obviously of different ages, which would not have been the case with twin brothers." Leake's identifications themselves were not welcomed until they were reflected back to us from Germany many years later.

The first half of the nineteenth century—the character of which was settled before steam commercialism altered everything—might be named from many happenings and typical qualities. From our point of view it was the age of the Parthenon sculptures and, as Haydon said, "The year in which the Elgin Marbles were brought should stand marked as an era in Art." The marbles and the discussions about them were a stimulus to the thought and effort of a generation. The clear shining beauty of the sculptures and the recognition how near Greek art kept to Nature—that is to noble nature—kindled for a time an exaltation of exultation and understanding—an Enlightenment.

Sculptors Honoured.

At the recent annual dinner of the Royal Society of British Sculptors at the Hyde Park Hotel, Mr. Alfred Gilbert, the sculptor of the statue of Eros, was awarded, in his absence, with a gold medal "for distinguished service to sculpture." The President, Mr. W. Reynolds-Stephens, presented the medal for "the best work of the year" to Mr. C. S. Jagger for his Artillery War Memorial. "The medal is usually struck in silver," said Mr. Reynolds-Stephens, "but we decided that owing to the exceptionally fine quality of this work the medal should on this one occasion be struck in gold."

ROMAN PALACES

In a recent lecture at the Central Sch of Arts and Crafts, Sir Banister Fletch V-P.R.I.B.A., described the palaces of Roman Emperors on the Palatine Hill, Ro and showed how with the ruins on the site was possible, with the aid of knowledge a imagination, to reconstruct these great bu ings in the mind's eye so as to get so idea of the appearance of Rome in the d of the Cæsars. There Augustus was bo and there he reared the first Imperial pala which was added to by Tiberius and Calig and further enlarged and partly rebuilt Vespasian, Titus and Domitian, while S timus Severus also remodelled and exten the buildings, which thus became the fin palatial pile ever erected. The plan magnificent, and there was nothing piecem or accidental, but the whole was laid out axial lines, with fine vistas, and when irre larities occurred they were masked by he cycles and devices similar to those emplo recently in the Admiralty Arch, London. great portion of fluted cippolino columns into the "tablinum," or throne room, flank by the Chapel of the Imperial "lares" one side and by the basilica, or hall of justi on the other. Thus, in accordance w Roman tradition, the Imperial power firmly planted, architecturally at any rate, tween religion and justice. Beyond was peristyle, or colonnaded court, for State and pageants, and this led to the "clinium," with its three tables and couc for diners. Their social sanctum, wh Emperors gave their banquets, remote fr the business of the outer courts, was flank by "nymphaeums," with flowers, fountai and running water. The lecturer then scribed the magnificent palace of Diocleti on the Adriatic—"a city in a house"—t ruins of which enclose a modern village, a this was followed by views and descriptio of the past and present aspects of vario Pompeian houses which have thrown so mu light on the social life of the ancient Roma

OBITUARY

A. H. W. Glasson.

We regret to record the death, at the a of 67, of Mr. A. H. W. Glasson, late Distr Surveyor for Hammersmith. He retired fr that appointment on August 31 last.

Stephen Allen Barns.

We regret to record the death of Stephen Allen Barns, M.B.E., F.S.I., ch tered quantity surveyor, of John-street, B ford-row, W.C., in his 61st year, on March at his residence, 51, Brooke-road, St Newington, N. 16. He was elected a Proi sional Associate in 1898, and a Fellow of Surveyors' Institution in 1899. He recei his early training in the engineers' office the East India Dock Company, and af wards acted as managing assistant to E. C. Pinks, Surveyor of Westminster. recent years he was in practice on his account, and on the panel of surveyors the War Office, and H.M. Office of Wo for whom he prepared bills of quantities several jobs.

Possessed of marked ability and speed sound construction and the practice of surv ing generally, he collaborated with sev well-known firms on large and import works. He also possessed a keen knowle of estimating based on analytical detail experienced judgment, and was rewarded his services to the War Office in assisting the preparation of the War Office Sche by being made a Member of the Order of British Empire.

Gyratory System at Knightsbridge.

The Westminster City Council Works C mittee report that the experiment in the arrangement of traffic on the gyratory sys at the junction of Knightsbridge, Bromp road, and Sloane-street has not proved a succ and that the old system should be resume

*For much of the earlier history, see *Journ. Hellenic Studies*, 1916.

†Admirable, isn't it? It recalls Morris on "the sham technical twaddle which passes for art criticism."

LIVERPOOL CATHEDRAL

At one of the series of lectures to building ade workers, organised by the Royal Institute British Architects, held on Tuesday evening, rofessor C. H. Reilly, M.A., F.R.I.B.A., dressed a well-attended and interested thering on "Liverpool Cathedral." Mr. H. M. etcher, F.R.I.B.A., occupied the chair.

In his opening remarks, the lecturer said r Giles Scott's Liverpool Cathedral had oadened Gothic architecture so that it lived ain; it had, indeed, started a new era in chitecture. He then discussed the Cathedral the three conditions of architecture laid wn by Sir Henry Wootton, namely, "commodity, firmness, and delight."

Dealing with the condition of "commodity," e lecturer said this meant the problem or ogramme. Every architectural problem had o sides, the physical and the spiritual. The ysical side of the programme of Liverpool thedral could be easily stated: it was to ovide a building for the Anglican rites. It fered from the requirements of the old hedrals in that the programme asked for a ge space where a great congregation could emble; whereas, in the old cathedrals there s no idea of providing a large preaching place. any programme, the spiritual side was the re important from the point of view of the hitect. In the case of a small house, if the e requirements, with minimum sizes of rooms l a minimum of materials only were used, the ysical side of the programme would be carried ; but it would not be an architectural ution of the problem. The small house uld mean more than that; it should mean d proportions; it should be well built, hould be of good materials—it should express at was meant by "home." That would be spiritual side of the problem. If, in the case a school, the bare requirements of the Board Education or the local education authority e complied with the physical part of the promme would no doubt be met, and the school uld be efficient. But the beautiful school was ery different thing from simply supplying e requirements, for some of the old schools e more to the scholars than any of the hing that went on within them. Beauty also lted from the practical solution of a straightvard problem, but the architect not only e physical fitness but put into a building ething of his own imagination.

he real problem in Liverpool Cathedral was make a symbol for higher things, for a erent aspect on life, for an enormous comity of a million inhabitants. That at once the problem out of the category of the edrals; St. Paul's, built for the needs of ge city, was the nearest approach in cathe- building to the problem of Liverpool.

r Giles Scott was favoured by the site. the architects of the time were wrong on question of the site of the cathedral, and the ien were right. The architects wanted the edral right in the centre of the town, but rchitects of twenty years ago did not foresee great American types of square blocks of es that would grow up in the commercial re of Liverpool. The centre of the city l the river; it was restricted by the Mersey, could not extend. Therefore, the buildings growing higher, as they were in New York. the Cathedral been built near these great ings, they would have spoilt its effect by mere bulk. The actual site was a mile from the centre of the city, with a slight etween, so that it was on a small hill that nated the city. The Cathedral was being parallel with the river, so that as one d along the Mersey, one saw first the great entrance and tower rising above the city, ved by a view of the full length of the ing. It was built on the edge of the quarry which the stone for most of Liverpool's ings had been obtained, and the site was, perhaps the exception of Durham, the finest our cathedrals.

city like Liverpool required something ent from the old style of Gothic cathedral, and it seemed that Sir Giles Scott felt that what was wanted most was a place where people, when entering the building to pray, would feel that they were leaving one world to enter another. That feeling on the part of the architect led him to use great thick walls, with windows high up and set far back to give the impression that the world was shut out. That was the only solution of such a problem for a city like Liverpool.

As regarded the second condition of "firmness," that meant good building, but it could be extended to mean the use of materials in a way that brought out their character; using the stone so that its stony qualities were to be seen, and so on. The Cathedral was built of red sandstone of a rough texture and varying in colour from pink to purple. The blocks of stone were built with a $\frac{3}{4}$ in. yellow joint, which brought out the gradations of colour. The stone was left with a rough surface, and the courses varied so that every quality of the stone was exhibited. The oak for the choir stalls was left with the pores open, without polishing or oiling. It had been a little aged by washing in alkali, with the result that it had a greyish colour that blended well with the walls.

The building was set on a rock, and that had led the architect to make it of a very rock-like character; it had almost a fortress-like appearance. It was first thought it would have been rather hard and grim for a cathedral, but they had all grown to feel that the building had been planted on its site, and to love it. It seemed welded to the great mass of the mound on which it was built, as though it had been carved out of the rock. There were no independent piers; everything was linked to the main structure. Inside, the reredos was part of the back wall; the pulpit was part of the pier against which it stood; everything seemed carved out of the solid.

The third condition, "delight," was an inexplicable thing. If they could explain the delight a good building imparted to those who looked at it they would all be artists, but the something that leapt from the mind of an artist, through his building, to the beholder was inexplicable. There were certain things the artist could do, and certain means of composition were at his disposal. Liverpool Cathedral had been designed so that it would be a perfectly monumental building, perfectly symmetrical about both its axes. Because of that, the Cathedral really dominated the enormous area of the city. It was the essence of a monument that it should be symmetrical, so that from whichever angle it were viewed there would be no surprises. Although the Cathedral started on the ground with certain irregularities it soon rose clear like a great liner towering over the tugs and ferry boats around it.

In that respect it was very different from the old cathedrals, with their flying buttresses; one got the impression that a cannon shot would simply make a hole in one of the walls of Liverpool Cathedral, but the old Gothic cathedrals gave the impression that if one of their flying buttresses were knocked away the whole building would tumble down.

A series of lantern slides was shown illustrating well-known Gothic cathedrals on the Continent and in this country, followed by slides showing Liverpool Cathedral in detail during and after construction of the completed portions.

New Organ in Sherborne School Chapel.

The new three-manual organ in Sherborne School Chapel has been dedicated by the Bishop of Salisbury. It was largely the gift of two masters, Mr. Macfarlane-Greive and the late Mr. James White. The oak case was designed by Sir Reginald Blomfield, R.A., and the builders were Messrs. Hill & Son and Norman & Beard, of London.

SOCIETIES AND INSTITUTIONS

NORTHERN ARCHITECTURAL ASSOCIATION.

The fourth annual meeting and dinner of the Tees-side branch of the Northern Architectural Association was held at the Vane Arms Hotel, Stockton. There was an excellent attendance, over which Mr. J. Clayton, of Darlington, presided, and at the business proceedings Mr. R. R. Kitching, of Middlesbrough, was elected chairman for the ensuing session, with Mr. G. J. Bell, of West Hartlepool, as vice-chairman. Mr. A. Harrison, of Stockton, was re-elected hon. secretary and treasurer, and Messrs. F. W. Turnbull, S. H. Clarke, and J. W. English were added to the committee.

The prizes given by Messrs. S. H. Clarke and J. R. Wray for "measured drawing" and "perspective sketches" were awarded to Messrs. L. W. Pool, R. G. Bell, A. H. Gillison, and M. Trotter, and votes of thanks were accorded the donors and the assessors in the competitions (Messrs. S. H. Clarke and J. A. E. Lofthouse). The Association gratefully accepted offers of prizes for the students' section from Mr. Clayton and Mr. Kitching.

THE FACULTY OF ARCHITECTS AND SURVEYORS.

At the invitation of the Chairman and members of the South-Western Branch of this Faculty a large number of members visited Southampton on Friday, March 11. The programme included an inspection of the Docks and some of the important businesses therein, and a luncheon at the South-Western Hotel. Before the luncheon the International Cold Storage Company's premises were visited, and the party was conducted through the stores by a member of the Company who explained the various processes of refrigeration.

The party then adjourned to the South-Western Hotel and were received by the Mayor and Mayoress of Southampton. The reception was followed by a luncheon at which the President of the Faculty (Colonel H. J. Duncan-Teape) presided; and in giving the toast of "Our Guests" he emphasised the honour paid to the Faculty by the presence of the Mayor and Mayoress of Southampton (Alderman P. V. Bowyer, J.P., and Mrs. Bowyer), the Town Clerk (Sir Richard Linthorne, O.B.E.), the Docks Engineer (Mr. F. E. Wentworth Shields, O.B.E., M.I.C.E.), and other well-known guests. The toast was seconded by Mr. A. E. Sockett, Senior Reader of the College of the Faculty, who mentioned some of the objects of the Faculty and referred to the hearty welcome extended to the members.

In reply, the Mayor welcomed the Faculty on behalf of the Corporation and people of Southampton. The toast was also responded to by Mr. Wentworth Shields, who welcomed the Faculty on behalf of the Southern Railway Company and gave interesting details about the Dock premises and the extensions now in progress; and invited the members to pay another visit to the Docks at a later date when the extensions were sufficiently forward for them to inspect actual work in progress.

Mr. Frank W. Parry, the Chairman of the Hants and Dorset branch of the National Association of Auctioneers, proposed the toast of the President and the Hon. Secretary of the South-Western Branch. Captain Brodrick briefly responded and said that the great success of that meeting was a very good augury for the future of the Faculty. The party then inspected the floating dock (the largest in the world); were shown over the R.M.S. "Olympic," and through Messrs. Harland & Wolff's engineering works.

BOOK REVIEWS

Lesser Known Architecture of Spain. (Second Series.) (London: Ernest Benn, Ltd.) Portfolio, sheets 13 in. by 10 in. 18s. net.

This portfolio contains 48 fine collotype plates with a short foreword by Mr. F. R. Yerbury, Hon.A.R.I.B.A. Variety in choice makes a strong appeal. There is a decided charm in turning from the cool shadows of the Gothic cathedral, the Moresque palace, and the sheltered garden to the stark fortress and fortified bridge of Toledo and the sun-baked streets of the small town. The illustrations of buildings, great and small, and some few gardens into which architectural features naturally enter, are of no set style or period, but, taken as a whole, they go far in the direction of giving us a bird's-eye view of ancient architecture from the simple domestic to the sumptuous Romanesque, the bizarre Moresque, and the graceful Gothic of the Peninsular. The Gothic of Spain affords one of the most fascinating studies in mediæval European architecture. In crossing the Pyrenees Gothic lost none of its Provençal spirit and strength, and took on such a new spirit in its adopted home that it seems to be almost native to the soil. Many of the examples given certainly come well within the title "Lesser known"; others again are probably very little known out of Spain from the fact that they are off the beaten track of tourists, but then again we should think that the Cathedral and Monastery of St. Thomas at Avila and the Cathedral and the Alcazar at Seville, to mention but a few, are very well known. These 48 illustrations thrown into book form with a modicum of sound critical text would make a very creditable addition to Spanish studies.

Woodcuts by the Members of Bembridge School. (Cambridge: University Press.) 10s. 6d.

Taking this little book as a text, a quite long and perhaps very tiresome sermon might be preached thereon. It is more difficult in the space of a short paragraph to point the moral of teaching art-crafts like "wood-cutting" and "linoleum-cutting" as mere pastimes in the intervals of leisure that may be found in the curriculum of a busy, up-to-date school. Bembridge School is happy in the possession of a far-sighted Warden, Mr. J Howard Whitehouse, and an efficient arts and crafts master, Mr. R. C. Muirhead. We appraise their merits on the evidence of their pupils' work. A third asset to the school is a printing press on which the boys print their own school magazine. They design their own covers and print their own blocks, which they cut from their own designs. Fifty woodcuts and half-a-dozen linoleum-cuts which have appeared in the school magazine are reproduced in a very neat volume (boards; quarter buckram; octavo; pp. 100) with an introduction by the Warden, who says that some of the work shown is by boys who have inherited their interest from homes where art is loved and practised. There the love and practice go hand in hand. There are seven contributors and it is not in dispraise of the others to suggest that J. Brandon Jones's "Cargo Boat at Mooring" and "Foundry by Night," and Adrian Beach's "The Old Barn" and "The Cart Barn" are the most direct in appeal. The best of all criticisms is that of the Warden of the school, who says: "All creative interests which come into the lives of boys are good and may prove of transcendent importance. It is not that we want a boy to cut wood blocks in order to get his living when a man as a wood-engraver, any more than we desire a boy who loves flowers and creates a beautiful garden to become a professional gardener. Such boys, in following these and other creative activities, are unconsciously forging keys unlocking for themselves the entrance to courts of beauty and of joy—the beauty of all true work, the joy of service and self-realisation expressed in all true work—and to these courts they come with standards of taste and judgment achieved through personal effort and experience, not docilely received from others."

A Stained Glass Window.
By Mr. George Parlby. (*See* foot of next column.)

MEETINGS

Friday, *March* 18.

London Society.—Mr. M. Fordham on "Slums: Their Making and Unmaking. Study in the Movement of Population." 18, John-street, W.C.2. 5 p.m.

Glasgow Architectural Craftsmen's Society.—Mr. W. M'Crae on "Architecture and Acoustics." At 7.45 p.m.

Royal Sanitary Institute.—Mr. F. Wilkinson on "Building Sites, Construction and Sanitary Planning." At 6 p.m.

Saturday, *March* 19.

London Society.—Visit to Geffrye Almshouses, Kingsland-road, E.2. 3 p.m.

Monday, *March* 21.

The Architectural Association.—Mr. Gilbert H. Jenkins on "Garden Design." At 7 p.m.

Institution of Structural Engineers.—Discussion on "Pitfalls Encountered by Young Engineers," by Major James Petrie. At 6 p.m.

Royal Sanitary Institute.—Mr. J. H. Clarke on "Museum Demonstration—Water-closets." At 6 p.m.

Institution of Electrical Engineers.—Discussion by Mr. R. J. Mitchell on "Domestic Electric Refrigeration." 7 p.m.

Tuesday, *March* 22.

Royal Institute of British Architects.—Mr. Percy Jarman on "General Materials." At 8 p.m.

Architecture Club.—Dinner. At Savoy Hotel, W.C.2. 7.15 p.m.

Institution of Structural Engineers.—Discussion on "The Design of Plate Girder Flanges with Special Reference to the Piling of Flange Plates," by Mr. D. G. Mackintosh. At Chamber of Commerce, Birmingham. 7 p.m.

The Illuminating Engineering Society.—Discussion on "Various Problems in Illumination and Practical Solutions." At 6.30 p.m.

Wednesday, *March* 23.

Liverpool Architectural Society.—Lecture by Mr. H. J. Rowse, A.R.I.B.A.

London Society.—Annual General Meeting. At London Museum, Lancaster House, St. James's, S.W.1. 4.45 p.m.

Thursday, *March* 24.

London County Council.—Mr. W. C. Pott on "Veneers." At Geffrye Museum, Kingsland-road, E.2. 7.30 p.m.

Royal Institution of Great Britain.—Mr. Guild on "Colour Measurement and Standardisation." At 5.15 p.m.

Society of Antiquaries.—Mr. A. W. Clapham on "Carved Stones from Breedon-on-the-Hill, Leicestershire." At 8.30 p.m.

Association of Architects', Surveyors' and Technical Assistants.—A Smoking Concert at Bedford Head Hotel, Maiden-lane, W.C. 7.30 p.m.

Friday, *March* 25.

Royal Sanitary Institute.—Mr. A. J. Martin on "Water Supply. Sources of Supply and Distribution." At 6 p.m.

Institution of Structural Engineers.—Mr. Harding on "Design of Industrial Buildings." At Great Northern Hotel, Leeds.

Institution of Structural Engineers.—Mr. Andrews on "Strength of Steel Stanchions." Bristol.

A Stained Glass Window.

This work was exhibited in last year's Academy. The panels, Joseph and [illegible] were carried out in glass for the late Rev. Garrett Horder's chapel, Joseph being a memorial placed in the chapel by Dr. [illegible] of Ealing, in memory of two sons, and figure of Elijah being given by the friends congregation in memory of their pastor.

ARTY WALLS: PRACTICE AND DECISIONS

CHAPTER XI.—FORM OF AWARD UNDER THE LONDON BUILDING ACT, 1894

By J. DOUGLAS SCOTT, A.R.I.B.A.

M OF NOTICE TO BE SERVED ON AN ADJOINING OWNER WHERE THE PROVISIONS OF THE LONDON BUILDING ACT, 1894, DO NOT APPLY.

o ..... of .....
whomsoever it may concern.
With reference to the party structure under-
tioned ..... hereby give you notice that
r a lapse of ..... month from the date of
ice hereof ..... intend to execute the
ks described below and shown on the plan
ched hereto.
uilding referred to and situation:—
Parish .....
Street .....
Number or Name .....
he part of the building referred to is that
l or structure which separates the above
ding from the building on the .....
reof, and being No. .....
escription of the proposed work:—
.....
.....
.....
ime within which consent to the above
ks is to be expressed or after which dissent
be inferred:—
ourteen days after service of this notice.-
consent is not so expressed ..... request
to appoint an Architect and Surveyor to
on your behalf and settle all matters of
rence with my Architect and Surveyor
may arise in connection with the work
posed.
..... hereby appoint ..... of
..... as ..... Architect and
veyor to settle on ..... behalf all matters
ifference.
nature of Building Owner).....
(Address).....
ated this ..... day of ..... 192..

M OF SUBMISSION FOR ADJUSTING DISPUTES BETWEEN ADJOINING OWNERS OF A PARTY WALL WHERE THE PROVISIONS OF THE LONDON BUILDING ACT, 1894, DO NOT APPLY.

difference being deemed to have arisen
een ..... of .....the
ing owner and ..... of .....
.... the adjoining owner as to the work
ibed in a notice dated .....
sed to be executed to the party wall
ing the premises known as .....
the premises known as ..... it
eby agreed to refer all matters in dispute
en the above mentioned parties in relation
o to ..... of .....
tect and Surveyor to the building owner,
to ..... of .....
tect and Surveyor to the adjoining owner,
before proceeding with the consideration
e matters in dispute shall select and
nt a third Architect and Surveyor, and
vo of these three Architects and Surveyors
be empowered by their award to deter-
he right to do and the time and manner
ng any work to which the notice relates
nerally any other matter arising out of or
ntal to such difference.
agreement shall be deemed a sub-
n to arbitration under the Arbitration
889.
d this ..... day of ..... 192..
ss .....
Building owner.
.. ..
Adjoining owner.

FORM OF AWARD UNDER A VOLUNTARY SUBMISSION TO ARBITRATION IN RESPECT OF A PARTY WALL WHERE THE PROVISIONS OF THE LONDON BUILDING ACT, 1894, DO NOT APPLY.

In the matter of a party structure separating the premises No. ..... from the premises No. .... in the County of .... of .....

being the building owner of the premises known as ..... having served upon ..... of .....the adjoining owner of the premises on the ..... side thereof, known as ..... a notice dated ..... of ..... intention of executing certain works, shown on the plan and section attached thereto and described as follows:—

.....
.....

and which ..... intend to proceed with after the expiration of ..... month after the service of this notice, and requesting the adjoining owner to appoint an Architect and Surveyor to act on his behalf.

Under the above notice the building owner appointed, ... of ..... as ..... Surveyor and the adjoining owner has appointed ..... of ..... as ..... Surveyor and as the adjoining owner has not expressed consent to the execution of the above described works within the time stated in the notice, a difference is deemed to have arisen between the building owner and the adjoining owner and under an agreement dated ..... these two Surveyors have selected and appointed ..... of ..... as third Surveyor, but in the event of his unwillingness or inability to act in this capacity then they select and appoint ..... of ..... as third Surveyor.

With the knowledge and authority of both parties to the difference it is agreed that any two of these three Surveyors shall have power by their award to determine the right to do, the time and manner of doing any work to which the notice relates, and any other matter arising out of or incidental to such difference, including costs, and such award shall be conclusive and binding on both parties.

Now we ..... and ..... having surveyed and examined the party structure and premises, and having carefully considered the matters in dispute do hereby make and publish this our award as follows:—

[Here would follow appropriate clauses defining the work to be executed and general clauses (see previous award)]

The building owner upon the signing of this award shall pay the fees of his Surveyor, which we assess at ..... guineas, and also the fees of the adjoining owner's Surveyor, which we assess at ..... guineas, and shall also undertake the proper stamping of this award and counterpart.

Signed in the presence of each other this ..... day of .....

.....
Building Owner's Surveyor.

.....
Adjoining Owner's Surveyor.

Exeter's City Wall.

A serious collapse of masonry has occurred in Exeter's ancient city wall by the river Exe, where it towers above roofs of buildings. This is the third fall of masonry during the last fortnight, and there is now a breach 30 ft. wide in the decayed structure, with the prospect of further falls.

THE NORTHERN POLYTECHNIC

The Annual Speech Night of the Department of Architecture, Surveying and Building of the Northern Polytechnic, London, was held on March 10, and was attended by representatives of societies and associations connected with architecture, surveying and building, and by leading architects and master builders, the audience numbering from 1,200 to 1,500. The architectural work was of a very high standard, and included studies in archæology and designs executed by day and evening students. The work attracted particular attention by reason of the accuracy and completeness of the designs, the perspectives and colour work being particularly attractive. The various sections of the School of Building exhibited a greater quantity of craft work than in any previous exhibition, and a very high standard of work was attained.

Mr. R. L. Roberts, M.A., Chairman of the Governing Body, in opening the proceedings, referred to the continued success of the School of Architecture and the School of Building, emphasising in particular the very great value to the embryo craftsman, and eventually to the industry as a whole, of a sound technical training.

Dr. R. S. Clay, B.A., Principal of the Polytechnic, referred to the importance of education in industry, and to the efforts of the School to equip students so that they might be able successfully to deal with the ever-increasing problems of the building industry.

Mr. T. P. Bennett, F.R.I.B.A., Head of the Department, compared the number of students enrolled during the session with that of previous sessions, and referred in detail to the work of the Department.

Professor A. E. Richardson, F.R.I.B.A., of London University, gave an extremely interesting criticism—illustrated by lantern slides—of the principal drawings and designs produced by the School of Architecture, drawing attention particularly to the value of simplicity in design.

Mr. A. H. Adamson, F.I.O.B., President of the London Master Builders' Association, referred to the work of the various sections of the school devoted to the crafts.

The Right Hon. Sir Hamar Greenwood, Bart., K.C., P.C., M.P., distributed approximately seventy prizes, medals and diplomas won by various students, and in a very able speech he congratulated the prize winners, and impressed upon the students the great value of application and perseverance in the prosecution of study and work.

A vote of thanks to the speakers was moved by Mr. J. Alan Slater, F.R.I.B.A., President of the Architectural Association, supported by Mr. A. J. Forsdike, F.I.O.B., President of the Institute of Builders, and the Earl of Drogheda, C.M.G. The vote of thanks to the chairman was moved by the Right Hon. Sir Hamar Greenwood, Bart., K.C.

"The Law Relating to Dilapidations and Waste."

Early last year we published a series of articles by Mr. W. T. Creswell, Barrister-at-Law, on "The Law Relating to Dilapidations and Waste," and the author, at the expressed desire of many readers, has now produced a practical treatise on the subject (*The Builder*, Ltd., price 6s. net), which we think will be accepted as a text-book. As the author points out in a Preface, the law relating to dilapidations and waste is now very much "in the making," and it has been his aim in this book "to indicate the trend of recent Statute and Case Law with a minimum of legal technicality consistent with concision of explanation, in order that it may be of practical use to the busy man." Mr. Alexander Macmorran, M.A., K.C., in a Foreword recommends the book as a concise yet a complete statement of the law, and at the same time a practical guide to many matters outside questions of a purely legal kind. We hope to publish a fuller notice of the book in an early issue.

THE LONDON BUILDING ACTS AND THEIR APPLICATION.—X

By H. V. MILNES EMERSON, A.R.I.B.A.

Section 46.—This provides for the Superintending Architect to define the front or rear of buildings if necessary.

Section 47.—Height of buildings limited.

A building (not being a church or chapel) shall not be erected of or be subsequently increased to a greater height than 80 ft. (exclusive of two stories in the roof and of ornamental towers, turrets, or other architectural features or decorations) without the consent of the Council.

Provided that where a contract shall have been lawfully made previously to the passing of this Act for the erection or increase of a building to a greater height than 80 ft. nothing in this section shall prevent same, &c. . . .

This section shall not apply to the rebuilding to the same height as at present of any building existing at the passing of this Act to a greater height than 80 ft.

Provided also that where any existing buildings forming part of a continuous block or row of buildings exceed the height prescribed by this section, nothing in this section shall prevent any other building in the same block or row belonging at the date of the passing of this Act to the same owner from being carried to a height equal to but not exceeding that of the existing buildings.

Note.—See Section 5 subsection 21 for the definition of "height," also notes relating to same.

Under this section the height of a building is limited to 80 ft., but two additional stories can be placed in the roof, the slope of which shall not exceed 75 deg. with the horizon limited in another section 60 (3).

Old buildings when pulled down may be re-erected to the original height, and this applies to buildings over 80 ft. high.

Section 48.—Procedure where greater height allowed. This section deals with the procedure whenever the Council consent to the erection of any building of a greater height than that prescribed by this Act.

Section 49.—After the commencement of this Act no existing building (other than a church or chapel) on the side of a street formed or laid out after the seventh day of August, 1862, and of a less width than 50 ft. shall without the consent of the Council be raised, and no new building shall, without the consent of the Council, be erected on the side of any such street so that the height of such building shall exceed the distance of the front or nearest external wall of such building from the opposite side of such street.

Where such building is erected or intended to be erected on a corner plot so as to abut upon more than one street, the height of the building shall (unless the Council otherwise consent) be regulated by the wider of such streets so far as it abuts or will abut upon the narrower of such streets to a distance of 40 ft. from the wider street. Provided that any building erected or raised before the commencement of this Act to a height to which no objection could have been taken under any law then in force, although exceeding the height provided in this section, may be re-erected to its existing height.

Note.—This section deals with streets under 50 ft. wide formed after August 7, 1862, and limits the height of new buildings so that they shall not exceed the distance of "the front or nearest external wall of such building."

In the case of Attorney-General *v.* Metcalf and Greig (1908, 96 L.T. 351) it was held that to ascertain whether the height of a building complies with this section the building must not be regarded as a whole, but each part of same must not exceed the distance of the front or nearest wall of the building from the opposite side of the street.

In this case application was made to the Council by the defendants, and they were allowed (under the powers of the Council) to proceed with the building as originally intended.

A building on a corner is regulated in height by the wider street to a distance of 40 ft. back on the narrower street.

This section does not apply to streets formed before 1862, and to streets over 50 ft. wide. Buildings up to the height allowed (80 ft.) can be erected provided arrangements can be made regarding any rights of adjoining owners.

Section 50.—This section provides for the raising of buildings so as to comply with provisions of the Act as to habitable rooms.

Section 51.—This section provides for the re-erection of certain working-class dwellings of local authority.

Section 52.—This section relates to domestic buildings facing a street and stables abutting upon mews at the rear, the depth of site not exceeding 150 ft., and the depth of stables from the mews not exceeding 50 ft., with a height of not more than 25 ft. These buildings may, for the purpose of open space required in section 41, be deemed to be one domestic building with the rear abutting upon a street.

If the stables be higher than 25 ft., or the depth of the site more than 150 ft., then each building will have to be provided with an open space to comply with section 41.

The London Building Acts Committee of the Royal Institute of British Architects established to consider the Reform of the London Building Acts, and after careful and expert consideration upon the subject, have drawn up a report which has been issued by the R.I.B.A. at a price of one shilling per copy.

The following are briefly the findings of the Committee :—

The London Building Act of 1894, together with its amending Acts, have become so involved, and in so many respects are inapplicable to present-day conditions, that it is essential for the adequate conduct of architecture and building in the County of London that these Acts should be forthwith simplified, amended and consolidated. . . . The Committee dealing with its main reference came to the conclusion that a useful purpose would be served by a consideration, in the first instance, of the broad principles governing the Building Acts and their allied Acts, leaving examination of details for future attention. It was felt that it would be very desirable that all enactments cognate to those in the London Building Acts proper should be consolidated into one general Building Act. Overlapping and confusion would then be avoided.

The subject matter is divided into 15 sections, and the Committee's conclusions are briefly as follows :—

Section 1. The laying out, widening and altering of streets and the fixing of frontages.

1. The public should have the right to form crescent roads out of a main road.

2. That the provision of three houses abutting upon a piece of land may cause that land to become a street tends to be oppressive. A larger number than three should be the limit.

3. That facilities should be given for development on the lines of quadrangles and closes.

4. It seems most desirable that when a scheme of laying out a street is approved a building line should be included in the approval. This also involves the question as to whether it would not be very desirable for the L.C.C. to have power to lay down a building line for all undeveloped land in old and new streets and thus eliminate the present cumbrous system of "Line of Buildings" in Section 22 of the Act. Also, that short side streets need not be of full width.

5. That although the L.C.C. can waiver most, if not all, of the matters coming under this section, emphasis is not sufficiently placed up the fact.

6. That where a small building front is reces back from the main building line a one-st erection should be allowed upon the reces land until the adjoining buildings are set bac

7. That whether the powers of the lo authorities under the Metropolis Managem Act, 1855, to collect the cost of making up ro from abutting owners be included in a Build Act, or not, there should be an appeal, as local authority can make up a road in a material, and also allow any class of traffic use the street, without consulting the wishe the various owners who have to meet the cos making up. The obligations of abutting own should be limited to £1 per foot of frontage a 10s. per foot on flanks.

Note.—This is a step in the right directi The increased cost of roadmaking, plus the ex frontage that will be involved by the L.C having scheduled practically all available bui ing land in the London area under the To Planning Act (which restricts the number houses at 12 to the acre), places a heavy burd upon the owners of houses on new roads. developing land at 12 houses to the acre shallow depth means increased road fronta and shallow frontages means greater dep The first hits the frontage owners and the seco hits the owners of corner sites. With regard the latter, the following is suggested as a f basis for payment of road making on flan That the average frontage of the houses on t flank side in question be ascertained and t owner of the flank to pay as his share amount equal to such average frontage for flank. Thus, if the average frontage of t houses on the flank side of the street is 30 then the owner of the corner plot would p (in addition to his frontage) an amount for 30 of flank frontage and no more, irrespective the depth of his ground.

8. The L.C.C. and the local authority shou have the power to be represented on a application for closing a street.

9. That there should be an appeal against right of the L.C.C. or local authority to prohi building over sewers. Many of these sewers old and direction of some unknown, and mu valuable property cannot be developed exce at a prohibitive cost.

Discovery at Gainsborough.

Excavations for building purposes in Market Place at Gainsborough have brou to light a fine Georgian doorway, having inlaid ornamental design. The doorway been purchased by Major H. A. Bell, v has presented the door to the town.

Royal Scottish Academy Exhibition, 192

The 101st annual exhibition of the Ro Scottish Academy will open in the Ro Scottish Academy Galleries, Edinburgh, April 16, and will close on August 27. works must be delivered at the Galleries and without cases. Receiving day for wo other than sculpture and architecture will Tuesday, March 22, between the hours 9 a.m. and 5 p.m. Receiving day for sc ture and architectural works on Wednes March 30, from 9 a.m. and 5 p.m. artist may submit more than three wo unless with the special sanction of Council. As regards architectural ph graphs, each frame may contain a grou views.

Note.—The drawings and prints sec stands outside this regulation. Artists submit three frames to that section.

The President and Committee of Arra ment for the year will award a prize of a £50 to the best work shown at the ex tion by a young Scottish artist. Exhib who desire their work to be considere this connection are requested to mention fact, adding age, on the advice form. form, giving full particulars of regulat governing exhibits is issued by the R Scottish Academy.

RCHITECTS' & BUILDERS' INQUIRY BUREAU

are glad to give questions and answers, but cannot responsibility for contributed replies, especially on matters.

we appeal to our correspondents to submit their on paper of a size easily filed, and written as as possible, or, better still, in typewriting?—ED.

Demolishing Hollow Brick Walls.

PLY TO MR. W. W. SANDELL, MARCH 4.]

R,—There is one other piece of useful data erning the condition of old cavity walls, which Mr. Sandell may be able to give. he have the opportunity of examining the ition of the damp-proofing round window es? The usual method of using bitumen ing to-day, for this purpose, is one which be quite all right, but of which we really very little. If this is the method used in vall which Mr. Sandell has seen demolished, ould be extremely instructive to learn in condition this part of the work was found.

G. A.

Dance Floor.

PLY TO "WEEKLY READER," MARCH 4.]

R,—Maple is undoubtedly the best wooden ng for dancing, and if it must be laid on crete, it should be bedded in mastic and in ow widths, grooved and tongued and t nailed. The floor will be very tiring, and, is possible, a spring floor is most desirable.

J. R.

Dampness in Bungalow.

R,—I am interested in a case of dampness bungalow built on a clay subsoil. The walls are 11 in. cavity, and there is a ient damp-proof course and ample ven- on under floors. The building is one of al built on the same site, and whilst all s are perfectly satisfactory, this one is out doubt very damp. The dampness is apparent in the walls or the floors, but ars to be in the atmosphere of the rooms, ng on bedding, etc., and causing a grey d to form on furniture, etc. The building been occupied four years.

PUZZLED.

Smoky Chimneys.

[REPLIES TO "CHIMNEY," MARCH 11.]

,—I suggest raising the brickwork, say, and setting a louvre pot for prevention wn blow.

H. L.

,—Probably flues without sufficient bends he cause of the trouble. A fireplace of the flue shows daylight through to the almost a certainty for a smoky one. ault being structural, probably the ugly s the only sure remedy.

BENDING.

Damp Course.

[REPLY TO "S. E.," MARCH 4.]

—One wonders whether your corre- nt is facetious in asking what a damp- really is. The term is, of course, a ner and to be correct should be written p-proof course." It seems absurd to e the functions of a damp-proof course columns of *The Builder*, but in case this ondent is lacking in such knowledge, it e defined as a continuous layer of im- s material, applied, either horizontally the whole thickness of a wall, or ver- to one of its faces, in order to prevent nsference by capillary attraction of rom some part of the wall that may be ct with or exposed to it, to other parts structure it is desired to protect from ter.

mpness shows on the inner face of a ly when certain conditions of weather ose particular conditions will form the e to the nature of the trouble. Your ndent does not give this information, very frequent cause, apart from con- densation, is the presence of salts in the substance of the plastering, or of the wall itself, which have the power, like table salt, of absorbing moisture from the air. This condition is usually accompanied by efflorescence upon the face of the wall.

Whether the trouble is due to the presence of such salts or to the absence of a horizontal damp-proof course, or to penetration of the wall by rain, it can be overcome by hacking off the interior plastering and applying an impervious rendering of waterproofed cement in its place. To obviate any possibility of condensation upon the cold, non-absorbent surface of the rendering, it should be skimmed over with absorptive plasterer's setting stuff consisting of lime, putty and sand, gauged with a little plaster of Paris to secure a proper adhesion.

L. E. WALKER.

Machine for Rubbing Floors.

SIR,—We should be obliged if any reader could give us the names and addresses of makers of a machine for rubbing terrazzo floors. We have heard of such a machine, driven by a small petrol engine, but this is imported from Germany. We should prefer a British make if such is available.

J. P. JUNR. & Co.

Measuring up Plaster.

[REPLIES TO MR. A. E. CROFT, MARCH 11.]

SIR,—Practice varies in different districts, and also, alas! with different surveyors in the same districts, but I think it will be found that the more general practice is to measure arrises as an extra labour, but to recognise no interruption in plain wall plastering for internal angles. In watching the craftsman at work, I think it becomes obvious that this is a fair way of translating the labours involved into fair measurement. On this and other similar points, your correspondent would do well to study the "Standard Book of Measurement," since it has been compiled, after considerable thought on the part of builders, surveyors and architects, and it will no doubt become a real standard in time.

SURVEYOR.

SIR,—In ordinary plastering I have not measured either external or internal angles.

H. L.

Rule of Thumb for Pricing Timber.

[REPLIES TO "TYRO," MARCH 11.]

SIR,—The price of timber, of course, varies considerably, but it is extremely useful to be able to start from a key price of £25 per standard from which proportional variations may be made. If the depth and width in inches of the cross section of a scantling be multiplied together and divided by four, the result is almost exactly the price per foot run in pence, at £25 per standard. This result is gained as follows:—

If $165 \times 144 \times 12$ cub. inches cost 25×240 pence,

Then $12 \times x \times y$ cub. inches cost

$$\frac{25 \times 240 \times 12\,xy}{165 \times 144 \times 12} = \frac{25\,xy}{99}$$

equals nearly $\frac{1}{4}\,xy$, x and y being the size of scantling in inches.

PRESTO.

SIR,—The usual timber standard contains 165 ft. cube. Therefore, if timber were £8 5s. per standard, it would be 1s. per ft. cube or 1d. in the inch, and 4 in. by 3 in. would be 1d. a foot run, and 9 in. by 2 in. would be 1½d., and so on. If this is borne in mind and the price always considered as some multiple of £8 5s., calculation, near enough for most practical purposes, should be easy.

H. L. B.

THE WEEK IN PARLIAMENT

WESTMINSTER, *Wednesday.*

L.C.C. Schools.

Mr. Dalton asked the President of the Board of Education whether he was aware that in new schools now being built by the London County Council the sanitary accommodation was below that of the Board's building regulations of 1914; and whether he would take steps to see that the standard hitherto enforced in respect of the building and remodelling of public elementary schools was preserved?

Lord Eustace Percy said he was aware that, in the case of some girls' departments, the County Council had provided rather less sanitary accommodation than that previously required under the Building Regulations of 1914. Authorities were free to suggest a departure from the current practice where it appeared to them desirable to do so; but no individual proposal was approved until the Board were satisfied that the accommodation of all kinds to be provided was adequate having regard to the particular circumstances of the case.

Leasehold Reform.

The Prime Minister, in reply to questions, stated that he hoped it would be possible to take the second reading of the Government's Leasehold Reform Bill before Easter.

London Squares.

Mr. Scurr has again introduced a Bill to prohibit building on certain open spaces in London. The measure has been read a first time.

The Rent Restriction Act.

Sir Walter de Frece asked the Minister of Health whether, in connection with the expiration of the Rent Restriction Act this year, he was considering the desirability of gradual decontrol, especially in the cases of houses which had been long since purchased by those wishing to live in them.

Mr. Chamberlain said that before deciding on their policy in regard to a continuance of rent restriction the Government would very carefully consider all aspects of the question.

Ministry and Housing Schemes.

Mr. Robinson asked the Minister of Health what was the number of housing schemes at present under consideration by his department, and how many of these had been under consideration for three months or more.

Mr. Chamberlain said that decisions on applications for approval of proposals under the Housing Acts were given by his Department as soon as possible after their receipt. He was not aware of any which had been under consideration for three months or longer.

Empty Houses.

Mr. T. Thomson asked the Minister of Health if he was aware that there were still a number of empty houses withheld from occupation in overcrowded areas; and would he reconsider the desirability of taking further steps to secure the use of such houses.

Mr. Chamberlain said he was aware that there was always a certain number of unoccupied houses which were held for sale. Local authorities already had power to purchase or lease houses suitable for the working classes,

Rating of Glass Houses.

Colonel Wedgwood asked why, in view of the intention of Parliament in passing the Rating and Valuation Act, 1925, glass-houses used for the growing of early vegetables were not being exempted from three-quarters of the rates on the same principle as farm buildings were exempted.

Mr. Chamberlain said that the Executive Committee of the Central Valuation Committee had expressed the opinion that the definition in the second schedule to the Act covered glass-houses used in connection with market gardening. The relief afforded under the Act did not come into operation in any rating area until the first new valuation list made under the Act came into force in that area, that was to say, on April 1, 1928, or April 1, 1929, as the case might be.

THE BUILDING TRADE

BY-LAWS RELATING TO BUILDINGS AND STREETS.—XI

STREETS II.

In our last article we made a digression from the Report of the Committee on Building By-laws in order to point out certain questions arising out of the statute law in connection with streets laid out on building estates, matters not within the scope of the inquiry of the Committee. We now return to the recommendations they made as to by-laws and regulations.

In the last article we set out a passage from the Report showing the nature of the complaints made before the Committee, and one of those complaints was that when a building estate is laid out the local authorities will not always give information as to the conditions upon which they will ultimately assume responsibility for the streets, and the Committee appear to have considered that the decision in Bristol Corporation *v.* Sinnott (1918, 1 Ch. 62; *The Builder*, December 21, 1917) prevented uniform conditions from being formulated in advance. We dealt with this case in our third article on "Making up New and Private Streets," and we submit that it does not touch that question. What the authority had done in that case was to prescribe a uniform *time* within which works required to be done under section 150 of the Public Health Act, 1875, should be completed, and the Court held that where a statute provides that a notice may be served requiring work to be done within a time to be specified in that notice, the time allowed must be reasonable, having regard to the nature of the work to be performed and all the circumstances of the case, which is a very different question to merely prescribing the nature of the work to be performed as a condition precedent to the adoption of the street by the local authority.

The first complaint the Committee referred to was that there was no effective appeal from the requirements of the authority on taking over a street, and the Committee were of opinion that it would be desirable to make these matters the subject of by-laws, but they reluctantly came to the conclusion that not all the details of final street construction would be suitable for inclusion in a by-law, and the requirements in respect of different streets might so vary as to make it impossible to bring the whole making-up within by-law control. They did, however, intimate that where any by-laws are in force as to new streets some elementary by-laws as to their construction might always be included so that the initial construction and width may be brought into relation, and the former could then be reviewed by the Ministry when considering the Council's proposals as to width.

The Committee pointed out that there are two incidental advantages in the making of by-laws on this subject at this stage as it would discourage the speculative laying-out of lengths of streets far in advance of all requirements and of facilities for sewerage and drainage, which is a nuisance to the public and to the inhabitants of the district, and it would also encourage the maintenance of streets by the local authorities from the earliest practicable stage. Then follows a passage in the Report which has a bearing upon the observations we made in our last article in connection with the practice of developing estates: "Whilst we do not go so far as to recommend that any fresh powers should be given to developing owners and others by which the local authorities should be compelled to assume full responsibility for the maintenance of streets before they themselves feel prepared to do so, it is a question whether this should not become a public charge as soon as possible, indeed it might be desirable that before final responsibility passes to them the local authority should, subject to recourse against the owner, defray the cost of keeping up and should control the street. An obvious corollary of this is that the developing owner should put it into reasonable good condition to bear the traffic in the early days before the stage of final taking over comes." This bears on the point made by us that the developing owner bears the least possible expense in making up the roads on the estate, wears them out in the course of his building operations, and then by selling the houses shifts the burden of making them up preparatory to being taken over by the authority, on to the shoulders of those who happen to be frontager owners when the authority become responsible for the roads.

We have already pointed out that where a street, not being a highway repairable by the inhabitants at large, requires repair to obviate danger to passengers and vehicles, the local authority under section 19 of the Public Health Acts (Amendment) Act, 1907, can require the owners of land and premises fronting, adjoining or abutting on the street to do the repairs and on their default the local authority can do the repairs and recover the expenses from those frontagers, but that if the local authority proceeds under this section then the majority of owners either in number or rateable value can require the local authority to act either under the Public Health Act, 1875, or where it is in force, under the Private Street Works Act, when the local authority must take the street over.

If the principle of this section could be put in operation at an early stage it would appear to serve what the Committee had in mind. On a building estate directly the roads laid out began to show signs of wear the local authority would then serve a notice on the developing owner (who at that time would not necessarily have sold many houses) to put the road in repair; if he failed to do so the local authority could do so at his expense, and if he called upon them to act under the Public Health Act or the Private Street Works Act he would be liable for the expenses of putting the road in a condition to be taken over. Thus the objects desired by the Committee would be accomplished, "the maintenance of streets would become a public charge as soon as possible, and the authority would, subject to recourse against the owner, defray the cost and control the street before final responsibility passed to them." In addition the developing owner would have an incentive to keep the road in reasonably good condition before the final taking over, and the burden of the heavy expenditure of putting worn-out roads into a condition to be taken over would not fall upon persons who, after a considerable lapse of time, had become liable as frontagers by purchasing houses on the estate. At the time the Statutes were passed the leasing of houses was the rule and not the exception that it has now become, and the statutes, by mentioning the owner as the person liable for making up the roads under the Acts as distinguished from the occupier, intended to make the developing owners the persons liable, but now the owning of houses has become the only general means of occupation frontager owners are made liable years after the estates have been developed for expenditure which should have been paid at the time.

Returning to the Report, the observations we set out as to the desirability of the local authorities assuming responsibility for the roads at as early a date as possible did not take the form of a recommendation, their recommendation being confined to the desirability of some elementary by-laws as to the initial construction of streets and a suggestion that any work done in pursuance of such by-laws at the initial stage should not be required to be done again at the taking-over stage unless for some good cause, and that it might be desirable to provide more definitely than is done in the existing Acts for an appeal on this question. This question of appeal is in a very unsatisfactory state, as we showed in our recent articles on "Making-up New Private Streets."

As regards the requirements to be imposed the taking-over stage, the Committee favou in principle a suggestion made to them several witnesses that local authorities should empowered by law from time to time to fi advance the maximum specification which t will impose without being bound to insist u it in every case, and it is stated in the Re that such specifications are essentially a l matter and therefore susceptible of b governed by laws made by the authority of locality as by-laws are made; but, on the o hand, as it is of the essence of a by-law tha should be fixed and that there should be discretion to vary its requirements, the C mittee suggested as a compromise that specification should be drawn up in e district probably with different classes of req ments according to the different kinds of which are likely to be laid out and that specification, although not a by-law, sh comply with the requirements of sections to 186 of the Public Health Act, 1875. specifications, it was indicated, could, lik by-law, be repealed or altered as often as necessary without prejudice to work or p already done or passed.

This recommendation marks a rather departure as these specifications would neither by-laws nor regulations, but the C mittee were convinced that an alteration in law in this sense would do away with a l proportion of the complaints that were m in connection with the construction of streets, complaints which have tended discredit by-laws almost more than any c complaints, although in fact they were relevant to by-laws at all. We note that Ministry of Health has issued a sugge standard specification for private street w

The Committee approved a practice ado in some districts of fixing a "standard p for each class of street works so that a develo owner knows definitely before he comm to lay out a new street, that if the traffic that street when formed should develop likely to develop so as to necessitate an e sive specification, he will have to pay no than for a street with ordinary traffic.

We have no experience of the working c system, but it appears to meet the so objection raised by frontagers in the ca Chester *v.* Briggs, a case we have ment in former articles, and the change o character of roads and of the traffic upon bears very hardly on frontagers, as explained in our last article. A person have purchased a house on what ap a private road remote from traffic, but to the development of the district its cha has changed, and when the street comes taken over by the local authority he himself mulcted to make up the street t traffic which depreciates the residential of his property and which he has no i in. And this emphasises the point made that the deferring of the making up of for the purpose of having them taken for many years after they have been const is unfair to frontagers who have acquired with this unknown liability attached to and who may be put to expense in mak the road to attain a standard never i contemplation and solely requisite in the interest, and we agree with the Com that the private roads should be taken soon as possible and when the developing is still responsible.

That school of thought which spe unearned increment attaching to dist they develop, loses sight of the fa development is paid for by private ind and would seek to tax property owne over. Sewers and roads form an in element in development and increase th of property, but at first in most case have been provided by private pur

RECTION OF SHEDS, MOTOR SHEDS, TEMPORARY BUILDINGS, &c.

By W. T. CRESWELL,
Barrister-at-Law, L.R.I.B.A., Associate (late Fellow) Surveyors' Institution, &c.

NERS or occupiers of property are wont ect sheds, and the like, for the purpose of houses, or motor sheds, without paying ent, if any, regard to the very necessary tes and by-laws which govern such rary erections; and by contravention of they may incur serious liabilities, or y rate be called upon to pull any such ns down. In all cases it must be remem- that although a by-law sets out what r may not be done, yet the local authority me discretionary powers, and these may xercised reasonably, whereas if these rs come before the Courts they must be dealt with under Statutes.

owner or occupier who contemplates g a shed should ascertain the following

f the erection is technically a "building." f it is exempt from the restrictions set the local by-laws, or if the consent of the uthority is precedent to its erection as a porary building."

f it is a new building and the proposed ould contravene any Statute governing ilding line of the street.

What is a Building?

lefine what is a "building" is difficult. lly it is a structure of brick, stone or covered in by a roof. A wall has been o be a building, so has a bay or bow-w, and an advertisement hoarding. A ure of wood intended to be permanently s a shop, but only laid on timbers on the e of, and not let into, the ground, was o be a building. Whereas a "houp-la," s roof and three sides of canvas, was held be a building. So, too, a portable e of wood. It may therefore be said ll sheds and the like before referred to within the category of "buildings."

Exempted Buildings.

urban authority, or a rural authority obtained like powers, derives its powers ne local by-laws in respect to buildings, m section 157 of the Public Health Act, By-laws framed under the model by-laws lly issued in 1877, and which have been lled many times, generally provide for mption of any buildings used as plant orchard houses, summer-houses, poultry garden-tool houses, cycle sheds or if they are under 600 cubic ft., and if ng 600 cubic ft. are wholly detached, least 10 ft. distant from any other which is not exempt. Also a building d to be erected and used exclusively for ose of a motor shed and which does not 1,200 cubic ft. and is wholly detached tant 10 ft. from any other building s not exempt is now included in the d buildings under most by-laws.

sion is also usually made for the on of buildings under varying conditions capacity, mode of construction and use, ance away from the street or adjoining s, or adjoining lands, premises, &c.

tly framed model by-laws provide for mption of "garden-tool houses," but "tool houses," though these might be d as similar; also for motor sheds eding 1,200 cubic ft. capacity, wholly and 10 ft. distant from any building pt under the by-laws. And this last bly includes a garage if the building, such, is not also used as a place of employment for one or more persons otor trade.

Temporary Buildings.

lly the erection of temporary buildings ed by the Public Health Act, 1907, at Statute has been made operative order of the Minister of Health. The local authority is empowered, where a proposed building is only partly temporary, to require that plans of the whole shall be submitted and their consent for its erection be first obtained. The Court in its discretion has held that the provisions of by-laws made under the Public Health Act, 1875, may extend to temporary buildings also in certain cases, and where they are held to do so the temporary buildings must comply with both the Statute and the by-laws.

Under section 27 of the Act the local authority may give its approval of a temporary building under certain specified conditions as to its sanitary arrangements, means of ingress and egress, and means of protection against fire; also determining the period during which the building is to be allowed to stand as erected.

On non-compliance with such conditions the local authority may remove the building, but notice must first be given to the defaulter, and an opportunity given to him to state his reasons for non-compliance before the building is demolished. An appeal to Quarter Sessions against any decision of the local authority lies under section 7 of the Act, which would appear to refer also to the refusal of an authority to renew its permission when the term or terms previously granted has run out. No appeal lies with the Ministry of Health.

The permission of the local authority is required for the erection of a temporary building, but failure to *disapprove* the plans when submitted may debar the local authority from raising any question after its erection.

No fee is contemplated under the Act as being chargeable for making an agreement conveying the necessary consent.

What is a New Building?

By-laws as to new buildings do not apply to buildings erected for a temporary purpose and which are to be pulled down when that purpose is achieved.

Structures erected for temporary purposes and not having the character of buildings used or intended to be used for human habitation are not "new buildings." But the fact that a structure is not of itself intended for human habitation does not exclude it from the category of "new buildings"; for in South Shields Corporation *v.* Wilson (1901), 65 J.P. 294 a wooden shed intended for use as a stable only, was held to be a new building within a local by-law.

In Brown *v.* Leicester Corporation (1892), 57 J.P. 79, a photographer's advertisement case, made of wood and glass, being 9 ft. long, 3 ft. wide and 7 ft. high, erected in his front garden, was held might be a building within Section 3 of the Public Health (Building in Streets) Act, 1888. A wooden shed used as a stable was held to be a new building, as was also a wooden building 30 ft. by 13 ft. on wheels stationed at the corner of a new street and used as a butcher's shop; it had a gas supply laid on, also water spouts and fall pipes.

Buildings Not to be Brought Forward.

Section 156 of the Public Health Act, 1875, deals with building lines, preventing the bringing forward of buildings beyond others in streets. It was repealed by the Public Health (Buildings in Streets) Act, 1888, which, however, re-enacted it in an amended form. By section 3 thereof it is not lawful in any urban district, without the written consent of the authority, to erect or bring forward any house or building, in any street, or any part of such house or building on either side thereof in the same street. A house at the corner of two streets may be considered to be in both streets for the purposes of the section. This enactment does not apply to rural districts and contributory places, unless its powers have been made applicable by the Ministry of Health, under section 276 of the Public Health Act, 1875. The building line is fixed by the first building erected in the street, and the Act of 1888 only gives a local authority the power to enforce observance of this building line by a new building subsequently erected and being near to in the street, since there must be some degree of proximity between it and the existing building or buildings.

A highway authority obtains its powers to prescribe a building line in any highway maintainable by it, under the Roads Improvement Act, 1925, paying compensation to any person whose property is injured thereby.

It will be noticed that the Act of 1888 deals with new buildings only, and will include a temporary building erected under the Act of 1907 (*supra*). It would also appear to include as a new building a building that has been removed from and later brought back to the same site. In James *v.* Tudor (1913), 77 J.P. 130 the appellant had for three years occupied two vans as a dwelling-house; he then removed them, and afterwards replaced them partly on blocks and partly on a wall which he had prepared, building a chimney to one of them. He then occupied them again as a dwelling-house, and when summoned for not having first obtained a certificate of fitness, it was held there was evidence that he had erected a new building.

Whether a shed picked up bodily and moved to a new position, say a few feet away, would be a "new building" is doubtful; but one that is taken away and then rebuilt is a "new building"; but one which has some small alteration, such as an opening for a window or door, is not a "new building."

It has been held over and over again that it becomes a question of fact for the justices to determine in individual cases and circumstances whether a structure is a building, and if so, whether it is new or not.

An open shop roofed in, and connected up with a newly-built house, was held to be a new building within the meaning of an Act which prohibited the erection of buildings within a given distance from a roadway. A wooden structure used for advertising purposes, 9 ft. 6 in. by 3 ft. and 7 ft. high, roofed over and with a glass front and a door, and fastened to the ground with posts, was held to come within the section of the 1888 Act referred to.

Where the Public Health Act of 1907 is in force the local authority has extended powers to control the erection of new buildings, for among other things the making of any addition or projection to an existing building or roofing or covering over an open space between walls or buildings is deemed to be the erection of a new building.

From the above it will be seen that most sheds and similar structures are "buildings," and that they may in certain circumstances be exempt under the local by-laws, or by permission, or licence they may be erected as temporary buildings; but that, nevertheless, if they are "buildings," and are held to be "new buildings," it matters not whether they are exempt under the local by-laws as temporary buildings coming within the provisions of the Act of 1907, the Statute is contravened if they are brought forward beyond the building on either side in the same street without the consent of the authority being first obtained. The formal consent and approval of the local authority is sufficient to empower the building owner to carry out the plans as submitted, even if those plans show an infringement of the building line, and if, also, the attention of the Council was not specially drawn to the proposed projection. (See Merrett *v.* Charlton Kings U.D.C. 1903, 67 J.P. 419, and Mullis *v.* Hubbard 1903, 2 Ch. 431).

As to the adjoining building, it must be looked at as a whole. A partial wing or projection cannot be regarded as the front main wall. See A. G. *v.* Edwards, (1891), 1 Ch. 194.

Section 3 of the Act of 1888 applies to a house having another building only on one side of it. If there are buildings on either side, the line of the least prominent one must prevail. (See Leyton L.B. *v.* Causton 1893, 57 J.P. 135, and Anderson *v.* Richards 1906, 70 J.P. 231).

INDUSTRIAL STATISTICS, 1926

LAST year we concluded our review of the industrial statistics for the year on a hopeful note. There was a marked diminution of industrial disputes, and although industry was still "marking time," there were signs that an improvement might be at hand, and we expressed the hope that peace in industry might prevail, so that renewed industrial prosperity might receive no check which could possibly be avoided. Yet the dominant fact in connection with industrial affairs in the past year is industrial unrest—the general strike of May and the disastrous coal stoppage of nearly seven months' duration, with the resultant serious set back in the trade we possessed, and the stifling of that revival in industry which had become clearly apparent in the first four months of the year.

Nothing is to be gained by recrimination as respects past errors, but calm reflection upon them may serve to avoid repetition of similar mistakes, and it may even serve a more useful purpose if it is accompanied by frank admissions. The general strike has resulted in demands from many quarters of a revision of the statutory powers conferred upon trade unions, and if a repetition of the disastrous events of May were to be anticipated such a step would undoubtedly have to be taken; but if the mistake in policy is frankly acknowledged, as it is in many quarters, any serious curtailment of the privileges now enjoyed by trade unions may be avoided, and only such amendments in the law be introduced as are as much in the interests of trade union members as of the general public. Extreme cases do not always call for extreme measures.

It must be difficult now at this interval of time for any dispassionate person to see what could possibly be gained by a general strike. The coal industry was in an admittedly serious position, and there had been a careful inquiry followed by an exhaustive Report as to the best means of extricating that industry from its difficulties, however caused. At such a juncture what possible gain could result to anyone either inside or outside that industry by the declaration of a general strike paralysing all industry? What could such a strike be aimed at? The nation could not at a moment's notice convert a non-paying industry into a paying one; nor could it divide non-existent profits in any different proportions between the wage earners and the employers; indeed the stoppage of all industry made it quite certain that all there would be to divide would be losses. It is impossible to see any sane industrial reason in the general strike, and if the motive was political—an attempt to force nationalisation on the country, which, however, is entirely denied as regards the general strike—was it in the least likely that the nation would be thus intimidated into taking any such course? Would any individual trade-union leader himself adopt any policy forced upon him in the first instance by force and intimidation? The majority must rule in the end, but even the majority is never wise in resorting at once to intimidation, and certainly the minority can never do so. If the coal dispute has done nothing else it has clearly shown the undesirability of combining politics and industrial objects; the two must be kept in water-tight compartments if industrial peace is ever to be hoped for. The political mind must be restless and pugnacious; the industrial mind should be peaceful and conciliatory, however energetic. At the time we write the discussion of the general strike by the Trades Union Council and the Miners Federation had not taken place.

In considering the industrial statistics of the year it is impossible to ignore either the general strike or the disastrous coal stoppage; their effects are writ large over all the statistics, either industrial, or nationa', or benevolent, such as unemployment relief and the Trade Union funds. In our foreign trade in the first four months of the year the adverse balance was diminishing, the fall in imports exceeding that in exports, but the trade disputes put an end to this; the import of coal alone involved an increased expenditure over that of the previous year of some £33,000,000, whilst the exports decreased by some £121,500,000. According to the *Railway Review*, that important union the National Union of Railwaymen—a union not directly concerned in the coal dispute, but involved like most unions in its results—has been compelled to turn a favourable balance of £727,019 into an overdraft of about a million pounds, and these are only examples of the ill effects of the industrial disputes. The whole country has been set back and very hard hit, and the only encouraging feature to be dwelt upon is that it bears it far better than could be expected, and that probably no other country in the world could go through a similar experience with so little ill-feeling and with such restraint. Some of the effects of the coal stoppage can be gathered from the *Labour Gazette*.

Unemployment.

On April 26, 1926, out of the twelve million insured persons, 7.7 per cent. were classified as wholly unemployed and 1.5 per cent. as temporarily unemployed. That is a total of 9.2 per cent. These are general figures, including the mining industry, and that percentage represents some 1,034,000 persons; the numbers in the previous January having been 1,316,000, the year thus far marking a steady decrease in unemployment, and by the end of April the percentage rate of unemployed persons and the number of applicants for employment was the lowest recorded since December 1920.

The statistics which follow from April, 1926, exclude those relating to the coal-mining industry itself and are thus directed to showing its influence on the other industries. By May 24 the unemployment percentage, excluding that industry, was 15.1—that is to say it had nearly doubled, 9·4 per cent. being wholly unemployed and 5.7 temporarily unemployed—and by the end of June this figure had risen to 15.3. At the end of July there was a slight reduction in the total figure of 0.3, some work having been resumed in the coalfields, but this and the reduction shown down to November 22 was entirely amongst those workpeople temporarily stopped, which, the *Labour Gazette* states, shows conclusively that the main increase in unemployment was directly attributable to the coal stoppage, and on November 22 the figures stand thus: total of unemployed, 14.1 per cent., those totally unemployed being 10 per cent., and those temporarily unemployed 4.1 per cent. The figures for December 20 were: total unemployed 12.1, 9.0 wholly and 3.1 partially. It is also important to observe that the trend of these figures is contrary to the figures for the two preceding years—that is to say, unemployment was increasing in the months during which it had previously declined. The gravity of these figures will be appreciated when it is realised that they entirely exclude the whole of the men in the coalfields who had ceased work. The only industries which appear to have been little affected by the coal stoppage as regards unemployment are the gas, water and electricity industries and the building trade and contracting for public works.

Trade Disputes.

The number of workpeople involved directly in disputes was 2,721,000, whilst 9,000 were indirectly affected. The loss in working days surpasses all the records for the past 15 years, totalling 162,780,000 working days. After the enormous expenditure of capital on the war and the disruption of all trade, whether home or foreign, when every energy should have been expended on restoring capital, and building up industry anew, the record this country has to show is a loss of over 162 million and a half working days. With wages at their present level it would be a very moderate computation to put the loss in wages alone at £50,000,000, and that loss will be continuing for a long time, for trade once lost or driven away cannot quickly recovered.

The years in which trouble in the coal f has occurred have always inflated the fig as to loss of working days, but the figures not exactly comparable because the numbe disputes varies in other industries. In there were only 313 disputes in all trades. 1912, the year of a great coal dispute, there 834 disputes, the number of workpeople dire involved was 1,232,000, and indirectly invo 230,000, and the loss of working days 40,890,000. In 1920 there were 1,607 disp involving 1,779,000 workpeople directly 153,000 indirectly, and the loss of working was 26,570,000. In 1921 the disputes numb 763, involving 1,770,000 directly and 31 indirectly, the loss of working days b 85,870,000.

The year of the Armistice was a very unset year as there were 1,352 disputes invol 2,401,000 workpeople directly and 190 indirectly, but the loss of working days 34,970,000. The very brief general strike a appears to have accounted for a loss in wor days, of 15,000,000, and the coal dispute 146,992,000; thus it will be seen that all other disputes only involved a loss of 1,784, working days.

Rates of Wages.

The *Gazette* states that the numbers of w people affected by changes in rates of wages the net effect of the changes on the general l of wages in those industries for which returns available were smaller than in any year s 1914. Those industries do not include a cultural labourers, domestic servants, s assistants, Government employees and m others, but the net result appears to have b an increase of about £37,500. In a note ba on all the information available to the Dep ment it is stated that at the end of 1926, wee full-time rates of wages were on the aver about at the same level as at the end of 192 that is about 75 per cent. higher than in Aug 1914, for a full normal week.

Cost of Living.

This makes it necessary to see what are figures which relate to the cost of living. At beginning of the year the cost of living working-class families was about 75 per c above the July, 1914, level as compared w 80 per cent. at the beginning of 1925. figure fell during the first few months. in May it had reached the lowest level reco since early in 1917, viz., 67 per cent. ab July, 1914. The figure then rose again t December 1, when it stood at 79 per c but it had again declined to 75 per cent. January 1 this year. Thus it will be the coal stoppage affected the cost of living made a difference in the purchasing powe the wages of those who still could get emp ment. This seems mainly attributable to cost of fuel as other items remained fairly ste but fuel rose from 85 per cent. in May to per cent. in November.

Hours of Labour.

Nine hundred and thirty-three thou workpeople had their hours of work chan but of these all were engaged in coal m with the exception of 340 persons, whose h were reduced by 1,000 a week.

The Building Trade.

In the Building Trade out of 801,040 pe under the Insurance Acts, 108,503 were u ployed on December 20 last, or 13.5 as comp with 13.6 in 1925, but 5,745 of these were temporarily stopped. The changes in rat wages resulted in increases of £7,000 in weekly wages; there were no decreases at

This is but a brief summary of some o industrial statistics for the past year, and a cause of thankfulness that the story the is not far more of a tragedy than it is, a nations could pass through such convulsion remain economically sound. But this sou congratulation is negative, and the lesson to be learned is that economic unrest injur whole community. It lowers the standa

ng, it increases unemployment and drives
e abroad. As a consequence it increases the
onal and local burdens and in that way, too,
es a burden on trade which prevents it
ring into foreign competition with success.
se who profess to be convinced that our
omic system is wrong are doing the nation
uel injury by stirring up industrial strife
h can effect nothing but disaster. If they
convinced that Russia represents the ideal
e which all nations should copy, the polls
pen to them and they can do their best to
e other people take a view which to the
rity here appears highly distorted; but to
avour to wreck the present system simply
der to prove that it is not a success is an
rhand policy which will never find favour
any nation gifted with the enterprise and
ation of the English working people, and
must now protect themselves from the
ry and distress such a policy entails.

IODERN PAINTS AND PAINTING

R. BERNARD CAYLEY, F.I.B.D., F.R.S.A.,
ered before the Bristol Society of Archi-
on March 9 a lecture on this subject.
ing his paper, the lecturer said that the
changes to be seen as regards materials
had occurred during the last few years
the remarkable increase in the use of
al paints, enamels, flat oil paints, ready
d paints and specialities of many kinds,
the use of comparatively new pigments
as titanium oxide and antimony oxide,
of which seemed to have great prospects.
aps the most remarkable incident of the
ase in the use of ready mixed paints of
us sorts was in the case of genuine white
and it appeared to be likely that the time
rapidly approaching when all painters
d use their genuine white lead in ready
d form or at least the bulk of it. The
e of adulteration here was small because
penalties were so great. An objection
times advanced against all ready-mixed
s is, in which term were included flat oil
s, enamels, etc., that inasmuch as the
tion of the surface to which the paint
o be applied varied, so, it was necessary
ry the quantity of thinners. That was
enough, but it applied principally to the
ng coat, and a priming paint properly
and applied should give a surface which
non-absorbent in ordinary painted work.
the architect's point of view there were
l tests for a good paint of a practical
ter which could be carried out without
ing any analytical tests at all or a
edge of chemistry.
more important of these could thus be
arised:—
Is the paint easy to put on by means
brush?
Does it flow out well, and do brush
ks disappear?
Has it good body or obliterating power?
Has it good spreading power?
Is the colour satisfactory for the par-
ar work in hand?
Is it durable when exposed to the
her?
At the end of a reasonable period,
hree years, is the condition of the paint
ble for repainting without much pre-
ion other than a thorough cleaning?

a good many years past there had been
out making service tests of paint on
scale and on a scientific and practical
but thus far such tests had not been
d on a comprehensive basis. Manufac-
of course, had made them for their
formation, but now we had a Research
tion of Paint, Colour and Varnish
cturers, which would be materially
by grants from the Government; it
be hoped that such service tests would
ied out on an extensive plan to the
dvantage of paint consumers, in which
ight be included architects and engineers, property owners, and the paint trade generally.

At this point the lecturer referred to the new Lead Paint Act which came into force on January 1 last. In some quarters it appeared to be thought that there is a provision in the Act which prohibited the use of white lead altogether. But that was not so. There was nothing in the Act which prevented the use of white lead paint excepting when it was to be put on with a spray on interiors, then white lead must not be used. The chief provisions were that it must not be purchased or used in the form of a powder but must be a paste. Dry scraping and rubbing down was strictly prohibited, the idea being to keep down the dust which arose from rubbing down, so the old-fashioned sandpaper could not any longer be used, and water-proof sandpaper must, in effect, be used instead. That, however, was not a grievance as the rubbing down was really facilitated, and although the water-proof variety cost more, it lasted so much longer as to be cheaper in the end. Facilities for washing were to be given to each operator, who was to have five minutes' time for such washing; in cases of illness the authorities should be notified.

The provisions of the Act appeared to be quite reasonable, and if, as was confidently anticipated, they had the effect of decreasing the number of cases of lead poisoning among painters, everyone concerned would be gratified. But if this result should unfortunately not come about, it was very probable that the proposals made some time ago to prohibit the use of white lead altogether either on the inside or outside or both would come up for consideration in Parliament once more.

The lecturer then dealt with the painting of iron and steel work. For the moment, he said, he would group together iron and steel and merely call attention to the fact that if they were exposed to the weather, unprotected, they were bound to oxidise or rust, and eventually wholly to decay. Sir Robert Hadfield had calculated that millions of pounds in value a year were wasted by the corrosion of iron, and he, the lecturer, would not be surprised if his estimate was under the mark rather than over. Engineers had for many years studied this subject, and there was still a wide difference of opinion as to the best preservative material to use. One could be sure at the start that all paints intended for iron were not necessarily of the same constituents. They should be varied according to the particular position of the iron and the work it had to do in resisting the weather. Whatever pigment was used, it was always desirable that the vehicle oil should be of such a kind, and should be employed in such quantities, that the paint made from it was elastic. Perhaps the first thing to realise was that iron was mostly non-absorbent. Some castings were slightly absorbent, but none of them approached wood in that respect. In painting ordinary wood or plaster the priming coat was made in such a way that the oil penetrated into the wood, whereby it was keyed on, or got a hold. The pigments were of such a character as to yield a hard, firm surface before the subsequent coats of paint were applied. In the case of iron, however, the absorption being small, if any, it was not necessary or advisable to use much oil. All that was required was that the paint should get a good grip on to the bare iron, should be sufficiently elastic, and should be in a condition to receive further coats. Needless to say, if several coats were given they should be of equal or nearly equal elasticity, and should unite one with the other so as to produce a complete protective coating. The first requirement, as far as the holding on or adhesion to the iron is concerned, was that such iron be perfectly clean when the paint was applied. This was quite necessary. In America, some years ago, a series of very careful exposure tests were made by an independent body, and the pigment which proved itself to be superior to all the rest was orange chromate. That material, however, was somewhat expensive, but could certainly be used for the priming and probably subsequent coats. If the colour was too brilliant, it was a simple matter to subdue it by adding a little black which would give a chocolate of light or dark hue according to the amount of black added. The second pigment was graphite or plumbago. Graphite paint had been used to a very large extent, among other places on the overhead railway in Liverpool and in New York. If graphite were used by itself the coat would be so thin as to be practically useless for protective purposes, but when it was mixed with silica it obtained the necessary body. The lecturer then dealt with the treatment of galvanised iron, concerning which there appeared to be some doubt. By galvanised iron was meant sheets of iron plate, usually corrugated, which had been dipped into metal zinc, the object being for the protection of the iron itself. If the zinc coating lasted indefinitely, of course no paint would be required, but it did not last a very great length of time. In fact, during the time that it took to get it from the workshop to the place where it was to be erected, parts of the zinc were frequently knocked off, and the same thing occurs when it was fitted. This left some of the iron exposed and rust followed. For this reason some engineers preferred to paint the galvanised iron as soon as it was erected, but before this was done it was necessary to remove the grease which occurred during the process of manufacture, and this could be done by washing with benzine or naphtha. Ordinary paint would not adhere to the zinc, and it was necessary first to give a coat as a mordant. That may be made by dissolving equal quantities of copper chloride, copper nitrate, and sal ammoniac in a glass jar or earthern vessel in one gallon of soft water, and when that had been done, 2 oz. commercial hydrochloric acid added. The wash should then be applied to the iron with a wide flat brush, and in a short time the metal would turn black, and on drying overnight, a whitish grey. It should then be gone over with a dust brush to remove the surplus salt, and then painted as desired. Paint applied over this would not peel if of good quality. The lecturer then said that he could not but think that existing conditions were more favourable to the architect getting what he wanted than ever before. He still depended upon the craftsman, but the architect and the decorator should work hand in hand. When, as must frequently happen, the architect was a little doubtful as to how best to obtain a particular finish or result which he desired, he could in nearly every case place himself in the hands of the decorator unreservedly. He would see that the architect got what he wanted in the most economical manner.

University College of Hull.

The Organising Board of the University College of Hull have approved the Memorandum and Articles of Association and given instructions that the necessary steps be taken to secure the approval of the Board of Trade in order to effect the incorporation in the simplest way of the University College. A revised lay-out plan of the site was submitted to the Organising Board and approved. It shows the lines along which it is intended to develop the 45 acres which are at the disposal of the College, and makes provision for what can reasonably be foreseen for the next 50 years. It includes 11 blocks of buildings for teaching and administrative purposes, a library, a great hall, a theatre and accommodation for physical training, including gymnasium and swimming bath, four women's halls of residence, and three men's halls, and residences for the Principal and seven Professors. Space is also devoted to the necessary recreation and sports grounds. In the first instance only a small portion of these buildings will be erected, but plans will be so drawn as to facilitate expansion as needs arise and funds are available.

NEW BUILDINGS IN LONDON

Barnes.—RECONSTRUCTION.—The Palaseum, Ltd., 226, Commercial-road, who have just recently purchased Barnes Theatre, are proposing to reconstruct the theatre. The architects are Messrs. Burdwood, Mitchell & Co., 80, George-street, Portman-square, W.1. Messrs. P. Marels & Co., Ltd., of Swinton Works, Swinton-street, Gray's Inn-road, W.C.1, are the builders and the steelwork is being constructed by Messrs. H. Young & Co., Smith-square, S.W.1.

Croydon.—DEVELOPMENT.—On the outskirts of Croydon an estate of about 400 acres is now in course of development and is known as the Mitchley Wood Estate, Riddlesdown. The Southern Railway, which runs through the estate, are erecting a new station, and a road-making contract of about £10,000 is just being completed by Messrs. Franks, Harris Bros., Ltd., of Guildford. The surveyors are Messrs. Blake, Son, & Williams, of 49, Chancery-lane, W.C.2.

Downham.—HOUSES.—Plans for more houses have been submitted and approved by the Lewisham Borough Council. This time 109 houses are to be erected on the Downham estate for the London County Council.

Downham.—SCHOOL.—The London County Council has approved an estimate of £37,632 for the erection of the third elementary school on the Downham housing estate, Lewisham. The contract is to be given to Messrs. Holland, Hannen & Cubitts, Ltd., 258, Gray's Inn-road, W.C.1.

Lothbury. — REBUILDING. — Messrs. Greenham, Ltd., are carrying out the demolition work at Founder's-court, Lothbury, E.C., to make way for the part rebuilding of Messrs. Brown, Shipley & Co.'s premises. Messrs. Holloway Bros., Grosvenor-road, S.W.1, are the builders and Major D. Wood, F.R.I.B.A., of 35, Craven-street, W.C.2, is the architect.

Fulham-road.—SHOWROOMS.—The Fulham Borough Council has approved the plans submitted by Mr. H. M. De Colleville, architect, 48, Bedford-row, W.C.1, for the erection for the Council of new showrooms and offices, at 587–91, Fulham-road. The scheme is to cost £13,000.

Grosvenor-gardens. — REBUILDING. — Messrs. Yates, Cook & Darbyshire, architects, 43, Great Marlborough-street, W.1, have prepared the plans for the rebuilding of premises on the corner of Grosvenor-gardens and Lower Belgrave-street.

Hackney.—COURT.—A new squash racquets court is being erected at Eton Old Boys' Club, Hackney, by Messrs. G. H. Carter, Ltd., Clissold Works, 57–59, Green-lanes, N.16. The architects are Messrs. Adshead & Ramsey, FF.R.I.B.A., 46, Great Russell-street, W.C.1.

Haymarket. — CONVERSION. — The premises beneath the Capitol Cinema are to be converted from a club into a restaurant. The work is estimated to cost £10,000.

Lewisham.—HOUSES.—Messrs. Clout & Tysoe, Ltd., builders, are to erect 60 houses on the Cranston-road estate, Lewisham.

Lewisham.—ADAPTATION.—Messrs. W. H. Gaze & Sons, Ltd., Kingston-on-Thames, have secured the building contract for the structural work for the adaptation of the infants' department of the Dalmain-road school and the rebuilding of the senior departments, for the London County Council. The tender accepted is estimated at £23,656.

Limehouse. — PREMISES. — Messrs. Sanders Bros. (Stores), Ltd., are having a new building erected in Thomas-street, Limehouse. The extent of the building is 250,000 cubic feet and the plans have been prepared by Messrs. Higgins & Thomerson, architects and surveyors, of 9, Finsbury-square, E.C.2. Tenders have not yet been given out.

Muswell Hill.—EXTENSIONS.—The Governors of St. Luke's Hospital, of Nottingham-place, W.1, have acquired land in Woodside-avenue, on which it is proposed to erect new buildings to house nervous cases. The architect for the scheme is Mr. Pole, of 10, Gray's Inn-square, W.C.1.

Piccadilly-circus. — RECONSTRUCTION. — The Westminster City Council are considering a proposal to the reconstruction and the enlargement of the public lavatories, at Piccadilly-circus, W.1. The City Council's engineer has estimated the work at £17,750, and the Underground Railway Co. have approved the plan.

Regent's Park.—BATH.—The Marylebone Borough Council are proposing to erect an open-air swimming bath in Regent's Park at the cost of £12,500. The site in question is in Albert-road, at the foot of Primrose Hill.

Reigate.—REBUILDING.—The "White Hart" Hotel is being rebuilt for Messrs. The Cannon Brewery Co. Messrs. T. Stevens & Sons, of 49, South Molton-street, are the builders, whilst the constructional steelwork is by Messrs. Young & Co., 6, Queen Anne's-gate, Westminster, S.W.1.

ABERAVON & PORT TALBOT MASTER BUILDERS

THE annual dinner of the Aberavon and Port Talbot Master Builders' Association was held at Port Talbot last week, when a large and representative gathering was presided over by MR. Thomas Hussell, President.

The loyal toast having been honoured, the toast of "The Town and Trade of Port Talbot" was proposed by Mr. A. G. Foley, who reviewed the progress of the town and docks during the past few years. They had plenty of room for development, he said. There was an extensive sea frontage, whilst the land behind the town was very extensive.

The toast was responded to by the Mayor of Port Talbot, who appealed to the builders throughout to pull together with the Corporation for the betterment and development of the town.

Mr. James Roderick, the Borough Surveyor, also responding, assured the builders that the Corporation were out to do all in their power for the betterment of the town on sound town-planning lines.

Mr. Emrys Griffiths responded to the toast for the builders' merchants.

"The National, Regional, Local and Kindred Associations" were toasted by Mr. Llewellyn Nicholas, J.P., who gave a review of the activities which led up to the formation of the various Associations, together with the establishment of the mother Federation. He said it behoved every builder in the Borough to become a member of his local Association, every Association had access to the Regio body, and through it to the Nati Federation, which comprised nine Regio Associations.

The toast of "The Visitors" was propo by Mr. Tom Rees, Mr. Hampton (Nea responding.

THE IDEAL HOME EXHIBITION

ONE of the most interesting exhibits from point of view of the architect and the builde this exhibition, which is now being held Olympia (and of which we published s account in our last issue), is that of the Lon Gas companies. We illustrate on this page of the stand's compartments, showing application of built-in gas fires and econo flues. One of the principal advantages of the fire is that, owing to the smallness of the required for carrying off the products of c bustion, the familiar projecting chimney-brea are no longer required—a distinct improvem in the internal appearance of a room thus be effected, together with a considerable saving space and in building costs. These small flu indeed, can be built within the thickness of ordinary wall, or, if necessary, against or i a partition wall, and they form an efficient a adequate means of ventilation. Their use a involves the disappearance of the large a expensive external chimney-stack, which replaced by a small, neat and unobtrus terminal. Gas fires have the approval of Ministry of Health, the London County Coun and other local authorities, who have adopt them in their housing schemes. Techni details of the construction of these flues given in literature which is available at t exhibit.

House Decoration.

We are informed with reference to Star Nos. 35 and 36 at this Exhibition, th is, the concrete "Georgian" house and Potter's Bar "Sun Trap" house, that the wh of the decoration of each house was entrus by the exhibitors—the Universal Housing Co to Messrs. A. T. Morse, Sons, & Co., Ltd., Plaistow, E.13.

"Calcarium" washable distemper or wa paint was used for practically all of the w and ceilings, and in the "Sun Trap" ho some unique decorative effects of great inte have been introduced.

A View in the London Gas Exhibit at the Ideal Home Exhibition.

NDICRAFT TEACHERS

following is an extract from a Circular 1.389) issued by the Board of Education, ealing with the examinations for Handi- Teachers :—

he evidence before the Board suggests that resent supply of Handicraft Teachers is ient to meet the needs not only of new s proposed by Local Education Authorities en of existing Centres. Under Schedule the Code in order to obtain recognition as dicraft Teacher a person is required to pass mination qualifying for recognition as an tificated Teacher, and either to complete proved course of training or to pass the l Handicraft Examination of the City and of London Institute. With the full con- ce of the Board, the City and Guilds of on Institute have decided to extend the of their Examination in order to remove difficulties which might otherwise have through the impending discontinuance of eliminary Examination for the Certificate ; he stages of the examination have been so ed as to remove some of the difficulties to experienced by candidates in qualifying gh this channel. Teachers who have not usly qualified for recognition as Uncertifi- Teachers will be regarded as so qualified on g the second part of the new examina-

n view of the difficulties experienced by orities in staffing Centres with fully qualified ers, the Board have found it necessary to emporary recognition under Schedule I.6 Code under certain conditions to persons have only passed the First Handicraft ination of the Institute. In the absence ch temporary recognition teachers often difficult to obtain the six months' teaching ience required before they can be admitted e second Handicraft Examination. An cation for the temporary recognition under dule I.6 of a teacher who has passed the ute's First Handicraft Examination must ade by the Authority desiring to employ

ails of the revised scheme are given in a ure which may be obtained from the rtment of Technology of the City and s of London Institute, 29, Roland-gardens, on, S.W.7. The brochure runs :—"A on of the Institute's scheme of Handicraft inations has become necessary in con- nce of the decision of the Board of Educa- not to hold again the Certificate Exami- for Acting Teachers, and to discontinue eliminary Examination for the Certificate 1928. Under the Scheme which has been e since 1923, a candidate who passed the l Handicraft Examination could claim exemptions in the Certificate Exami- and obtain the Board's Certificate by the rest of the Certificate Examination. cision of the Board makes the exemptions ative and removes the possibility of any r, Handicraft or other, obtaining the cate as an Acting Teacher. With the ching discontinuance of the Preliminary nation for the Certificate, there also dis- s a convenient examination by which a r of Handicraft can obtain the status of certificated Teacher and thus fulfil one conditions at present required by the d Guilds of London Institute for entrance ir Second Handicraft Examination. To he new situation, the City and Guilds of n Institute have decided with the con- e of the Board of Education to extend ge of their Handicraft examinations by dition to the First Examination of ques- pers in English and Arithmetic, and to ond Examination of question papers in and Principles of Teaching, and of a al test in Art crafts as an alternative to Science Handicraft. In view of the g of the scope of the examinations, it longer be necessary for candidates for ond of the revised examinations to have the Preliminary Examination for the ate of the Board of Education or an ent examination."

HOUSING: INFERIOR TIMBER

The following circular has been issued to local authorities by the Scottish Board of Health :—

"I am directed by the Scottish Board of Health to inform you that their attention has been drawn recently to various instances in which timber of a very inferior quality has been delivered on the sites for use in assisted housing schemes. These instances are not confined to any one district, and it may be that further deliveries of this timber, if they have not already been made, will be attempted unless active measures are instituted for its rejection wherever it appears. The timber has been inspected by the Board's officers, and they have no difficulty in recommending that it should be condemned. It is an ungraded timber, decayed at the heart, spongy and of poor grain, and has in some instances been supplied where white wood was specified. Accordingly, where timber of a quality other than that specified has been supplied and used it should be the subject of a special inspection.

"Occasionally, also, this inferior timber has been found mixed with good timber. This renders its presence less noticeable, but the Board are advised that where proper supervision is exercised there is no difficulty in detecting it. The Board are therefore the more disquieted, in that at some sites no action was taken for its rejection until the attention of those responsible was called to its presence by the Board's inspectors. The Board do not need to impress on the local authority the danger attending the use of poor timber, more particularly for joisting, but the circumstances of the cases brought under their notice certainly suggest that there is need for more careful examination of the quality of materials being used in assisted housing schemes, and the local authority should satisfy themselves that there is no laxity so far as their schemes are concerned. Architects and clerks of works should be put upon their guard and instructions given that when the timber supplied is not in accordance with specification and in good condition it is to be rejected.

"The case of houses being erected by private enterprise with financial assistance from the local authority also requires attention. Here the inspection of materials is more difficult; but it is for the local authority to devise all necessary measures so that they may be assured that no occasion will arise for the withholding of the Exchequer subsidy by reason of inferior materials being used in the construction of the houses."

THE NEW "SWAN & EDGAR" BUILDING

In connection with the new "Swan & Edgar" building at Piccadilly-circus, which is approaching completion, the London County Council has refused the Company permission to use the top floor. The difficulty has arisen largely owing to the conflict of authorities. The Crown architect has required that the building be in conformity with the rest of Regent-street—80 ft. above street level to the cornice and 100 ft. to the top of the roof—while the refusal of the L.C.C. Building Act Committee, which is based upon the London Building Act of 1894, is entirely concerned with the risks of fire. The area of the company's top floor is larger than the Council thinks safe without a party wall or some corresponding structural alteration, and this the Company are not willing to have done, as they take the view that to cut up the internal area thus is a retrograde step architecturally and bad for business, as it prevents wide, open departments where the customer can see a big display of merchandise at a glance.

An application to the Council for special consideration, in which is pointed out that the Piccadilly Hotel next door has a portion of its structure above the 80 ft. limit occupied, has been refused because "The building erected by Messrs. Swan & Edgar is of warehouse type and contains divisions of such cubical extent that it brings it within the regulation No. 130, which limits the height above the pavement to 80 ft." In addition, the L.C.C. is of opinion that the building is not of a type easily to be attacked in event of fire, as there are no balconies or other points of vantage on which firemen could get the hold necessary, since the maximum "carry" of the hose from ground level is only about 65 ft.

We understand that all objections would be waived in the event of the party wall being introduced.

DR. BARNARDO'S HOMES

Sir,—I desire, through your important and interesting journal, to appeal to all those practising and interested in the building craft to help in an effort being organised to raise funds to erect additional buildings at Dr. Barnardo's Homes, as a gift from the building trade to celebrate the occasion of the Diamond Jubilee of that Institution. I cannot do better than add a copy of the Appeal issued by the Committee, and to say that from time to time public acknowledgment of the sums received will be made, with your kind leave, in the columns of *The Builder*.

"In 1866 the late Dr. Barnardo commenced his work by looking after a single destitute child in the East End of London. By 1926 the movement had grown to such dimensions that the family numbered 4,000 boys and 3,000 girls. The former are trained in handicrafts and the latter in housework. They live in home groups, each group being under a house-mother.

"There are six principal and twenty-eight branch homes with seventeen receiving houses up and down the country. Since 1866 over 100,000 waifs and strays have been fed, clothed, educated and made into good citizens: 3,000 emigrated to the Colonies, while the remainder settled in the homeland. Without Barnardo's, these poor children would have become hooligans and criminals supported, perforce, at the expense of the rest of the community.

"The Boys' Home at Woodford Bridge is needing five more houses. These are in reality homes where families of twenty-five live with their house-mother. This Woodford home has no church building, and it is desired to include a suitable structure in the scheme. The Girls' Home at Barkingside needs a swimming bath, and this should be included.

"These various buildings will probably entail an outlay of £50,000 or £60,000, and this is the sum for which an appeal is now being made to the building industry in London, to begin with, and subsequently throughout the country. The Committee will be responsible for the funds raised being wisely and economically expended.

"The calls by Government and local authorities for rates and taxes are heavy enough in all conscience, but no one knows how much more would be claimed were it not for the efforts of institutions such as this. On the ground, therefore, of merely business prudence and economy, we appeal to you to help this institution to do even better work in the future than it has accomplished in the past.

"Contributions will be gratefully acknowledged. Should any firms desire to collect from their operatives in addition to making a personal donation, collecting boxes and sheets will be provided on application."

F. Higgs.

"Signing" Magna Charta.

Sir,—In your last issue there are some very excellent fresco decorations from a pavilion at the recent British Industries Fair, White City, designed by Messrs. Richardson & Gill, FF.R.I.B.A. I notice the second one—"The Charter of British Liberty"—is a picture of King John *signing* Magna Charta. How did the impression ever get abroad that King John signed this Charta? All Chartas were sealed, and it is doubtful if King John could write.

S. M. Young.

LONDON STREET PAVING

The twentieth annual report of the Metropolitan Committee on Means of Paving the Streets of London, for the year 1925-26, which has just been issued, states that considerable difficulty has been experienced in recent years in connection with wood paving, due to fast and heavy traffic causing movement of the blocks, with the result that the joints are opened and water gets under the paving, causing damage to the foundations in many cases. It is also found that, as a result of the close-jointed method of paving generally adopted, particularly if the weather is cold or damp, the grouting material does not penetrate into the joints, or only very slightly, and this is soon sucked out by the traffic, similar difficulties arising from water entering open joints. Considerable displacement of the wood, at times, takes place.

In order to obviate this difficulty and at the same time preserve a water-tight joint, experiments have been made with two kinds of specially-made blocks, produced by different firms: one kind in Aldwych, between the Strand and the east side of Kingsway, and the other in Lower Regent-street from Waterloo-place to No. 5. In the former case the blocks are kept apart by a thin strip of wood about 1 in. in depth, attached to the bottom of the block for its full length, and two smaller pieces near the top, which effectively prevent the block from moving, at the same time allowing sufficient space for properly grouting the joints. In the latter case, a somewhat similar result is arrived at by cutting down the side and one end of each block so as to leave two slightly projecting lugs on one side and a similar lug at one end.

The Fulham Borough Council have provided a complete crushing, grading, and bituminous mixing plant at their refuse destructor for the purpose of utilising the clinker from the destructor furnaces for road surfacing. The plant has been in operation about 18 months, and many roads have been surfaced in the borough with single and two-coat clinker paving. The results up to the present have been very successful, and the material is now being tried out on roads with heavier traffic.

Falmouth Building Industry Committee.

It was decided, at a public meeting of those interested, held at Falmouth on March 8, to form a building industry committee for the town, and a local employer, Mr. C. Strongman, was appointed chairman and Mr. F. Pascoe honorary secretary.

PROPOSED NEW BUILDINGS & OTHER WORKS.*

IN these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

FOLLOWING is a list of abbreviations — Borough Surveyor, B.S.; Borough Engineer, B.E.; District Surveyor, D.S.; Clerk, C.; Town Clerk, T.C.; County Engineer, C.E.; County Surveyor, C.S.; County Architect, C.A.; Surveyor, S.; Engineer, E.; Borough Architect, B.A.; Architect, A.

BUILDING DEVELOPMENTS IN IRELAND

The Free State estimates for the year ending March 31, 1928, show that £876,041 is to be spent on public works and buildings, a decrease of £246,210 compared with the year ending March 31, 1927. The estimates prepared by the Commissioners of Public Works show that £60,000 is required for the reconstruction of the Custom House, Dublin, the expenditure already incurred amounting to £120,000, and the total estimates for the work being £198,500. £60,000 is required for the partial reinstatement of the Four Courts, on which £128,500 has been expended already. The total estimate for the work is £281,000. £25,000 is required for rebuilding the Henry-street front of the General Post Office; £23,000 for rebuilding the central block; £30,000 for reinstating the frontage; and £10,000 for rebuilding Princes-street front. Already £52,600 has been spent in rebuilding sections of the Post Office, and the total estimate for the work is £247,726. For the construction of a restaurant and garage at the Oireachtas £5,000 is required from a total estimate of £16,500. In the Department of Defence £25,000 is required to complete the restoration of Castlebar Barracks; £20,000 for reconstruction of Michael Collins' Barracks, Cork; £7,000 for alteration to buildings at Dublin headquarters, £5,000 for reconstruction of hangers and barrack at Baldonnell; £7,000 for restoration of Limerick new barracks (£1,200 for electric lighting); £5,000 for reconstruction of Renmore Barracks; £10,000 for reconstruction of Waterford Barracks, and £10,000 for new barracks at Ardnacrusha.

Many thousands are allocated to the restoration of old and the building of the new police barracks throughout the Free State. £5,000 is allocated for alterations on Cork Post Office, and £1,000 each for Killarney and Limerick Post Offices. £10,000 is allocated to rebuilding of Nos. 14-15, Upper Sackville-street, and £5,000 to No. 45 of that thoroughfare. The amount for building and enlarging national schools totals £75,000, while £35,000 is allocated to preparatory colleges.

THE SCOTTISH BUILDE

REGIONAL PLANNING

The advantages to be derived from regional planning in Scotland were outlined by Mr. G. L. Pepler, F.S.I., Past President of the Town-Planning Institute, in an address in the Technical College, Glasgow, under the auspices of the Regional Planning Advisory Council for Scotland. Mr. Pepler said the Scottish Advisory Council should have little difficulty in getting their aims accepted by the Local Authorities concerned. He outlined the progress of the movement in England, mentioning that 560 schemes of town planning were being prepared by 360 Councils in England and Wales, and the majority of these Councils were acting entirely voluntarily. There were now 42 Joint Town-Planning Committees, representing 617 Local Authorities, and covering 6,700,000 acres, or nearly one-fifth of England. The Minister of Health had recently convened a conference of the Authorities within 25 miles of the centre of London with the object of setting up a great co-ordinating committee for that region.

NEW BUILDINGS IN SCOTLAND

Falkirk.—GARAGE.—The Dean of Guild Court has passed plans for an omnibus garage, shop and washhouse at Brown-street, Camelon, for Messrs. Alexander & Son, Ltd., at £2,800.

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXXII.—No. 4390. MARCH 25, 1927.

ST. GEORGE'S HALL AND THE CENOTAPH

THE citizens, and especially the architects, of Liverpool are once again confronted with an issue not only of great interest to them, but to those who know their city and its great masterpiece of architectural art, St. George's Hall—an issue concerning both St. George's all itself and the Cenotaph which it is proposed to erect on the ateau in front of it. It will be remembered that as the result a competition for the Cenotaph last year an admirable design Professor Budden was chosen by Professor Reilly for a site rtly covered by the Beaconsfield statue, which was to be moved and placed on the steps of St. George's Hall, in front the main entrance to the Hall. The Cenotaph as designed Professor Budden is, in our opinion, a very fine conception, t its suitability for the site is now being seriously questioned, me critics going so far as to say that in no circumstances ould it be placed on the plateau in front of St. George's Hall—at the plateau should remain a plateau, as it was never tended to be a repository for all kinds of monuments, as it becoming—while others believe that, although a fine sign in itself, it would, in consequence of its size, be detri-ental to the noble building behind it. It is of interest to note at the accepted design showed the Cenotaph to be 39 ft. 6 in. g and 18 ft. high, and as regards bulk it has been compared a pair of subsidy cottages. In any case, although the dimen-ns appear to have been reduced to 31 ft. by 15 ft., the struc-e, it seems to us, will be large enough to justify the contention at it will seriously interfere with the view of St. George's ll, especially at close range, as will be seen from the plan we e on p. 474.

We are not surprised that a number of architects and laymen Liverpool are very much concerned about the future of St. orge's Hall and its appearance if the Cenotaph is placed in position decided upon, and certainly if its size is not reduced. e Disraeli statue, which can hardly be called a work of eptional merit, has already been removed from the plateau l, placed on the steps leading to the Grand Portico, a position irely unsuited, we believe we are right in thinking, to character. The removal of this statue may not matter so ch, but the proposal to erect the Cenotaph in its place is te another question, and one which we hope will be very efully considered by the citizens of Liverpool before it is ried into effect.

A careful perusal of the correspondence in the Liverpool ss convinces us that those responsible for the Cenotaph he Cenotaph Committee as well as the assessor and the hitect whose design is to be carried out—have always ised the importance of providing that the work should be harmony with St. George's Hall both in size and in archi-ural composition, for it was provided in the competition ditions that a full size model should be set up on the site help the architect to determine the final dimension of his gn, but considerable discussion has arisen in reference to condition. Sir Archibald Salvidge, who has taken a pro-ent part in the decision to erect a Cenotaph on the site as memorial to the Liverpool men who lost their lives in the war, and who rightly contended that the memorial should be provided out of the rates rather than by private munificence, has stated that the model is to be erected for the guidance of the architect alone and not the general public, and is an incidental part of the work commissioned by the Council to be carried out. and that the site has been settled for good and all. Architectural opinion in Liverpool, on the other hand, appears to be against the erection on the selected site of a Cenotaph of the dimensions of the accepted design even as modified—at all events until the public have had an opportunity of judging for themselves from the model which is to be erected for the guidance of the architect; and their attitude is well expressed by an architect who writes to a Liverpool paper pointing out that the agitation has the sympathy of the great majority of thinking architects in the city, and is directed solely against the scheme in its entirety and not against the architect or his design, "as they consider any memorial, irrespective of its excellence as a work of art, entirely detrimental to the repose and dignity of the great building in front of which it is proposed to be placed. The Cenotaph is to be paid for by public money. St. George's Hall belongs to the public, and if the weight of local architectural opinion is so dead against the scheme, surely the ratepayers would have good ground for complaint if we refrained from pointing this out to them and making our protest with a view to the matter being fully discussed before it is too late." The proposal to leave the model for a month or two after erection in order that the public may have an opportunity of forming a judgment on the issue appears to us a very reasonable one, and we cannot understand the statement of Sir Archibald Salvidge that the model is for the use of the architect alone, and that the site has been selected for good and all. In any case, the model is to be provided, and it will be on the proposed site for all to see, and we shall be surprised if the general public remain indifferent in the matter. The questions involved are too difficult to be decided by one or two individuals, however competent they be, and in our opinion the Council of the Liverpool Architectural Society should be consulted for an expression of opinion, or the Royal Institute of British Architects.

We are in sympathy with the Liverpool architects and others who are anxious that a mistake should not be made, for this is more than a local question, as the admiration we all have for Elmes' masterpiece gives us a right to appeal to the Liverpool city fathers to stay their hands and to consider carefully what the result of precipitate action may be. It is true that a note of warning might have been given earlier, but we suppose those who feared the result were waiting for the model before voicing their opinions. In our opinion, the Cenotaph of the dimensions decided upon should have a site well away from a building of the character of St. George's Hall, and a central position in a park would seem to be more appropriate, where its size would not mask or clash with other erections. We appeal to all architects and all those who admire St. George's Hall to study the plan we give on p. 474, and ask themselves (1) whether the erection of the Cenotaph is or is not likely to block out a large part of a very fine building, and (2) whether it is not better to leave the site free of more monuments and statues. If the model should justify the misgivings we have given expression to, surely the resolution of the Liverpool Council would not be as irrevocable as stated by Sir Archibald Salvidge. We appeal to the architects of Liverpool to take the matter seriously and petition the Council not to decide definitely on the site until the model has been approved by the general public.

NOTES

Improvements in the Country-side.

It is, in one sense, a true saying that abuses cure themselves, but we should misconstrue it in supposing we had no part in the cure. Feeling has been deeply stressed by the defacement of the countryside, and we are glad to hear of a prosecution, successfully carried through by the Kent County Council. Petrol pumps, supply stations, garages, enamel advertisements, disfiguring the views of rural scenery, and mutilating in cases the village itself have aroused a feeling of great indignation which is well expressed in the letter contributed to a contemporary by Mr. A. H. Pollen. The value of his letter is much enhanced by the fact that he makes constructive proposals, which are more helpful than criticism only, as when he tells us: "Why should not the different makers of motor spirit offer liberal prizes for the twenty best posters, or enamel plaques, to be distinctive without being glaring, and increase instead of outraging the natural and artful beauties of the road and village?" And why not? We have suffered much too long from the neglect of the public interest by the motor industry, which, in the pursuit of its own ends, has spread its horrible disfigurement throughout the country. We hope this appeal for a better treatment will bear fruit.

The Adam Brothers' Birthplace.

One of the buildings which it is proposed to demolish under the new housing scheme at Kirkcaldy, Fifeshire, is the house in which were born the famous architects, the Brothers Adam, who built the Adelphi, in London, and many other famous buildings. The house is now a lodging-house, and is marked for demolition under a scheme of town improvements. At the inquiry recently held in Kirkcaldy, locally known as "The Lang Toun" under the Housing (Scotland) Act, under which the Corporation sought powers to promote a scheme for slum clearance, the case for the burgh was outlined by Mr. McConnachie, advocate, Edinburgh, who said a scheme for slum clearance had been projected in Kirkcaldy for thirty years. He said that it was proposed under the new scheme to provide 168 houses, chiefly of the one, two and three-roomed type, with bathrooms and gardens. Incidentally, besides the Adam Brothers, Adam Smith was born in Kirkcaldy, while Thomas Carlyle and Edward Irving taught school there.

Station Advertisements.

We note that at the annual meeting of the Great Northern Railway (Ireland) Mr. Milligan, of Belfast, drew attention to the inartistic way in which show advertisements were arranged at the different railway stations. When one considers English railway stations and their advertisements as a whole, it would be complimentary to refer to them as "inartistically arranged," since this description would suggest that some kind of arrangement exists. In reality the enamelled plates advertising commodities are put up without any suggestion of either order or reason. It would be an excellent move if, at the annual meetings of our railways, shareholders would raise this question and force the companies to adopt some kind of organised adverti policy.

Geneva.

The scheme of decora the Industrial Labour O at Geneva through the tributions of member States of the Lea of Nations should lead to interes results. Contributions are to take form of the examples of the art or nat product for which each nation is known, or which it has brought to greatest degree of perfection. Engl is sending specimens of Tudor panelling, France contributes exam of her tapestries, and the Irish State is commissioning Mr. Harry Cla to provide a stained glass window il trating some phase of modern l literature. Mr. Clarke's recent exhibi in London has shown that he is a ma of technique and imagery. One h that his imagination will lead him progress towards a quality of fresh and simplicity, leaving behind macabre Beardsley influence that se sometimes to have hampered his ger

Dublin Bridges.

The Government's opp tion to the second readin the Port and Docks Boa "Bridge" Bill shows t the Irish authorities are alive to danger of rebuilding bridges with adequate thought. The Butt Br question in Dublin has much in comm with the problem of Waterloo Bri except that the iron swing bridge posse no merit either in position or design. is at once badly placed and exceedi ugly. In taking a wide view of Dub future traffic requirements one ca

ape the conclusion that Westland-row ıst be connected with Amiens-street by vehicular bridge east of the Customs use to ease the bottle-neck at College een and to provide for adequate trans- t between the Ballsbridge and Clontarf as. The decision to thrash out the ole Dublin problem through a com- tee of the Dail is certainly a wise one. e days when city bridges were erected narrow and local reasons are, one es, over.

Contemporary Valuations. Without deprecating the amount of attention bestowed on the picture by Mr. Stanley Spencer, at the pil Galleries, which, in many ways, is inal and well executed, we may none less feel that approval bestowed in unmeasured and rather hysterical ion is a little premature. Soberness ot a trait of much of our art criticism, ch is so often unstable and carried y by anything new, and this attitude ot one to secure that its judgments infallible. We are glad that the pil Gallery should have secured under ew direction so popular an exhibition, to assert as a contemporary does that e picture ought to be secured for the on is quite certain," is to make us more uncertain than before. Not we would depreciate the interest value of the painting, but there is ence already of a too ready accep- e for our permanent collections of ires, the original reputations of which now seen to be lagging far behind. circle through which these enter- s are engineered is often representa- only of the group who happen to sent the vogue of the time, and our nal Galleries should not be con- d by contemporary valuations that not had the measure of time to e that the judgment formed rests ything more than passing feeling.

An Unhappy Resurrection. A correspondent writes:— "Can there be any reasonable doubt that if a picture like Mr. Spencer's 'Resurrection' is bought for the nation that the appreciation of the picture will fail orse the wisdom of such a purchase? clever picture is, we are told, the ne of a sincere belief in the methods primitives and the deliberate choice artist for the expression of his art. all I can say is, that much as we e the work of the primitives and obvious sincerity, it is a curious that we should deliberately set to o copy their shortcomings. In my n this picture of the Resurrection iting in decorative value both as position, colour and drawing, and s nothing to my mind but a feeling or at the disagreeable spectacle of odies breaking through the bondage r tombs. We have wandered into devious paths in modern times, but it is time to protest against this of the methods of past ages when

The Queen Anne's Walk, Barnstaple.

there are plenty of living artists who can give us something reflecting the real beauty which art can supply."

Industrial Unrest. The special committee of representatives of Chambers of Commerce appointed by the Association of British Chambers of Commerce to consider the subject of industrial unrest has issued its second report. The first related to the effects of trade unionism on industry. The keynote of this second report is the urgent need for closer personal co-operation between the heads of industrial concerns and the workers, and the committee also state their conviction that there is need for a better system of informing employees in matters which relate to the progress and advancement in the particular industries in which they are engaged. It is satisfactory to note that the committee believe, as the result of testimony from many quarters, that the relationship of those employed and those who immediately employ them was never better than it is to-day, but, unfortunately, when difficulties arise and matters of importance call for decision, there is a tendency for each party to go its own way without mutual consultation. Then follows a passage in the report we especially desire to call attention to. In the days of personal ownership there was a better understanding possible between employers and their employees than is the case under modern conditions, where the personal element is disappearing. The limited liability company has tended to supersede the personal employer, but even the limited liability company is now being enlarged into the combine or group system. At the same time, the workman is not only represented by the trade union alone, but the trade unions are also federating, and both these highly organised bodies tend to create a divided loyalty in the members who constitute them—the employer is divided between his loyalty to his workpeople and his association, and the workman between his loyalty to his employer and his trade union. It really appears to be the case of the house divided against itself, and a feeling of suspicion arises, not, the report states, so much in the workshop as between the members of such federations or organisations.

A New Embankment Palace. We take the following item from the *Evening Standard*. We think it will be of interest to our readers:— "At the meeting of the Imperial Chemical Industries there was some talk concerning the new building that is to be erected on the Embankment. Sir Alfred Mond has selected as his architect Sir Frank Baines, who is Director of Works at the Office of Works. The Government architects in this department are permitted to keep in touch with private practice, and Sir Alfred Mond, who was First Commissioner from 1916 to 1921, is well aware from practical experience of Sir Frank's ability. The new building will cost upwards of a million pounds, and is to be erected with almost American hustle."

GENERAL NEWS

Professional Announcement.

Messrs. Cheadle & Hardy have dissolved partnership. Mr. Cheadle is now practising at 2, New-square, Lincoln's Inn Fields, and Mr. Hardy at 46, Beauchamp-place, Brompton-road.

Cambridge Conservative Club.

Mr. Sidney French, F.R.I.B.A., of Cambridge, has been appointed architect for the re-building of this building, which was lately destroyed by fire. The cost will be between £9,000 and £10,000.

Royal Scottish Academy.

At a general meeting of the members of the Royal Scottish Academy, held in Edinburgh, Mr. Charles Oppenheimer and Mr. Stanley Cursiter have been elected painter associate members of the Academy, and Mr. D. A. Francis to the vacancy for a sculptor associate.

New Altar Window at Crowland.

A new altar window, to cost £1,000, is to be placed in Crowland Abbey, situate in the Fen country, midway between Spalding and Peterborough. The Crowland Church Council has the matter in hand, and the work is to be undertaken at an early date.

Lake Windermere.

The National Trust have written to the Windermere Development Association, announcing that if £7,000 is raised in the Lake District the Trust will consider issuing a National appeal for the balance of £6,000 for the scheme to purchase land on the shores of Lake Windermere for public enjoyment for all time, and for additional public landings.

The Castle Inn, Yeovil.

The "Castle Inn," Yeovil, one of the oldest buildings in the town, which stands in Middle-street, the narrow main thoroughfare of the town, and was formerly the house of one of the priests serving one of the chantries in the parish church of St. John the Baptist, is to be demolished. It has a fifteenth century arch and some early windows, which it is intended to remove and preserve.

Architects' Estates.

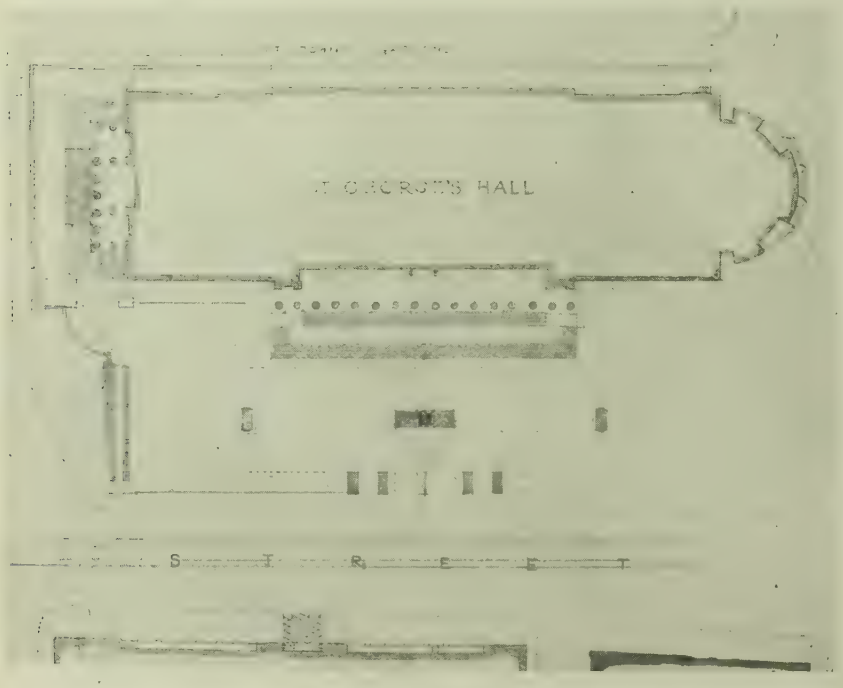
Mr. John Banister Smith, of Balmuir Lodge, Balmuir-gardens, Putney, S.W., and of Parliament-street, Westminster, architect and surveyor, left £29,436.

Mr. Henry Hoyne Fox, F.R.I.B.A., of "The Ardmay" Hotel, Woburn-place, W.C., late of the Indian Public Works Department, and formerly Chief Architect for Burma, who died on October 21, intestate, left £2,468 with net personalty £411.

The Widening of Piccadilly.

Replying to a question at Tuesday's London County Council meeting, Sir Percy Simmons stated that the Piccadilly widening, which was practically complete, ranged from 10 ft. to 28 ft. With regard to the cost of £377,000 which it involved, the County Council had paid as its share £313,000. The balance was contributed by Westminster City Council, and the Ministry of Transport.

Fleetwood War Memorial.



Fleetwood U.D.C. are proposing to erect a war memorial in Warrenhurst Park, Fleetwood. The architect for the scheme is Mr. B. Drummond, A.R.I.B.A., of Fleetwood, and the sculptor is Mr. Tyson Smith, of Liverpool, while the lay-out is under the supervision of Mr. E. Frobisher, the Council's Surveyor.

Monmouth Diocese Cathedral.

With only five votes to the contrary a largely-attended special Monmouth Diocesan Conference at Newport on Monday decided that a new Cathedral should be built at Newport for the new Diocese of Monmouth. It is understood that the proposed site for the Cathedral is on the Bassalleg-road, on the same side as, and adjoining, Stelvio, the residence of Sir John Davies, C.B.E. It is anticipated that about five acres of land will be required. The cost is largely a matter for the future, but one sum mentioned at the Conference was £500,000. A Cathedral Fund is to be established immediately. Further arrangements have been referred to a Cathedral Committee.

Greenwich Memorial to Wolfe.

There is, we understand, a possibility that the long-discussed memorial at Greenwich to General Wolfe may be erected during the present year. The hero of Quebec, who was born at Westerham, lived for a considerable time during his early years at Macartney House, Blackheath, and was buried at St. Alfege Church, Greenwich. The site of the memorial, for which a considerable sum is stated to be in hand, has not yet been decided. St. Alfege Church has been suggested, but Blackheath is considered more likely. It is believed that the London County would be willing to allow the erection memorial opposite Macartney House n Council's tennis lawn and bowling green suggestion is that the memorial sho enclosed in an ornamental garden with s

Plan of St. George's Hall, Liverpool, showing proposed site of Cenotaph.
(*See pages* 472 *and* 476)

New Charing Cross Bridge.

In the annual report of the London S published in the March issue of the s journal, reference is made to the recom tions of the Royal Commission on Cros Traffic and to the threat to some of the squares of London. On the subject of the report says:—

"Although it may be a matter of regr the departure of Charing Cross Station other side of the river is not to take pla the fact that the Commission has put f a solution which is acceptable to the r company brings the new road bridge in realm of practical politics, and the cou this society is determined to support recommendation the Commission has In this manner alone is it possible to p end to the interminable wrangle ove problem of cross-river communications. regard to the question of finance, the of the society is of the opinion that a d sum of approximately the figure suggested be set aside annually by the Governmen of the revenues of the Road Fund for th pose of new construction in accordance the Commission's proposals. London i enough and used by a sufficient proport the motorists of this country to justif allocation suggested."

OBITUARY

Sir C. Walston.

We regret to announce that Sir C Walston, who was famous, not only a archæologist, but also for his vivid interest kinds of problems of art and philosophy, ha while on a cruise in the Mediterranean Charles, who, amongst many other degrees that of Hon. A.R.I.B.A., was a prolific and his publications included "Essays o Art of Phidias" (1885), "The Work of Ruskin" (1894), "The Study of Art in U sities" (1895), "The Expansion of W Ideals and the World's Peace" (1899), " the Nineteenth Century" (1903), "Greek ture and Modern Art" (1916), and English Speaking Brotherhood and the I of Nations" (1919). He was a member Council of the British Archæological Sch Rome and Athens, and also Vice-Presid the Hellenic Society.

COMPETITION NE

Swimming Pool and Baths, Morecam

The following six architects have been s to take part in this limited competition Fred Harrison, 30, Willow-street, Accri Messrs. Easton & Robertson, 36, Bedford London, W.C.1; Messrs. Boddy & Demps Palace-street, Westminster, S.W.1; A. W. S. & K. M. B. Cross, 45, New Bond London, W.; Messrs. Thomas H. Ma Sons, High-street House, Lancaster; Horth & Andrew, Custom House Bu Whitefriargate, Hull. Mr. Gilbert F.R.I.B.A., is the assessor, and premi £100, £50, and £25 will be paid to the au the designs placed first, second and thi £10 each will be paid to the authors three designs unplaced.

R.I.B.A. Prizes and Studentships, 1927

Full details of the Royal Institute pr studentships for 1927–1928 are contain pamphlet now published by the R.I. Conduit-street, W., price 1s., exclusive age. The publication contains full inf of the various prizes, &c., together wit applicable, the detailed programmes competitions.

Calcutta War Memorial.

Mr. John Greaves, Architect. Bronze Statue by Mr. Herbert W. Palliser, Sculptor.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Liverpool Cenotaph, St. George's Hall Plateau.

SIR,—I enclose two photographs of St. George's Hall taken since the Disraeli statue has been moved from the central position to the steps. These photographs show the magnificent effect of leaving the central position of the plateau clear. The feeling of space is refreshing, delightful and dignified. The view of the Art Gallery portico across the plateau is seen for the first time, and how charming it is. It is certain that this openness must be retained.

If Professor Budden's large Cenotaph was built on the other side of St. George's Hall, where Gladstone is at present, its great bulk would not interfere with the view of the building behind; it would merely form a base to it. I think it is a possible way out of the present difficulty. To provide a site for the Cenotaph we need not sacrifice any of the beauty of our great building, and it is obvious already that that must happen if the centre position of the plateau is built upon.

Liverpool. LEONARD BARNISH.

The Registration Bill.

SIR,—On the question of the registration of architects, one of your correspondents asks a question as to what use the Bill as at present drafted can be, since members of the Institution of Civil Engineers, Surveyors' Institution, Institution of Structural Engineers, and Institution of Municipal and County Engineers, are exempted from all its provisions except the right to the title "architect." He bases his question on his remark that if members of these other societies are permitted to give an "architect's certificate," anybody, by joining one of them, can dodge the Registration Bill and give these certificates under another title than that of architect.

Perhaps your correspondent will first of all consider as to what may be the difference in wording of a certificate (*a*) given by an architect to his client for payment to the contractor for a large building, and (*b*) that given by an engineer to his client for payment to the contractor for a large building. When he has digested this point, it may occur to him that the Registration Bill could hardly set out to prevent engineers and surveyors from giving certificates to their clients. Moreover, it is not particularly easy to dodge the Registration Bill merely by entering one of the other institutions named. All of them have their entrance examination, which some consider to be quite as difficult to pass as that of the R.I.B.A.

MAURICE KIDDY,
Secretary, The Institution of
Structural Engineers.

SIR,—The weakness of the proposed Registration Bill seems to me to be in the lack of adequate provision for the control of the training and entrance of the architectural student.

If this measure is to be effective and useful, it must aim not merely at the present advancement of the interests of the profession, but at its future betterment. The Bill as it stands seems to ignore the fact that the student of to-day will be the practising architect of to-morrow and no provision seems to have been made for his control until he takes on this fresh responsibility. For this reason I am strongly in favour of the provision of a Register of Students being part of the Bill as suggested by the Secretary of the A.A.S.T.A. STUDENT.

A Students' Register.

SIR,—I feel confident that all those architects who have the future welfare of the profession at heart will agree with the views of the Secretary of the A.A.S.T.A., regarding the incorporation of a provision of a Students' Register in the proposed Registration Bill.

The profession will undoubtedly benefit if the Bill is passed as it stands, but the next generation of architects, the students of to-day, will be no better off than their predecessors. The architect will have been trained in many cases by the present haphazard methods and have entered the profession through the existing irregular channels. I have seen too many cases of a young man picking up his knowledge of construction and design in the spare moments between typing and filing letters and general office routine. This does not go to make the efficient architect of the future, and it is not to be wondered at that the present-day architect is accused of being inefficient at his profession.

Although this Register of Students may not wipe out altogether these inefficient methods of tuition, yet it will go a long way to giving the R.I.B.A. the adequate control over the training of its students which it should have by right.—Yours faithfully,

ASSISTANT.

Architectural Staff Salaries.

SIR,—Arising from my letter which ap in your columns last week, I have re several letters from many parts of the c congratulating the A.A.S.T.A. for its sta behalf of salaried architects. May I b mitted to quote from one of them, which t more light on the value placed on the serv these men, this time in the Government se

"May I draw your attention to the com ing scales of salaries for surveying and ar tural staffs awarded by the Arbitration Co Government Servants?

(1) Quantity Surveyors (Graded as tant Surveyors) (P.A.S.I. Qualific Salary £170 per annum, plus variable c living bonus. Equal to a weekly sala about £5 5s.

(2) Assistant Surveyors (Graded as veyors' Clerks). Salary £120 per annum variable cost of living bonus. Equal weekly salary of about £3 14s.

(3) Architectural Assistants (Grade Draughtsmen). Salary £140, plus c living bonus. Equal to a weekly sala about £4 6s.

"Applicants for the above posts must Service men, and the minimum age must fore be about 27 or 30 years."

If any doubt still exists that the professi architecture and surveying can continue w a basic minimum scale of salaries, such r tions must effectively dispel it. The qual work is very often deplored, but it will ger be found that the standard varies as the accompanying the post is good or bad. salaries will invariably command efficien vices, and the operation of basic min salaries will attract the best type.

JOHN MITCHELL, General Secretary
Association of Architects, Survey
and Technical Assistants.

Lincoln Cathedral.

Fresh discoveries of unsuspected da entailing further revision of the estimate of repairs, are disclosed in the report t Executive Committee of the Lincoln Cat Repair Fund by Mr. R. S. Godfrey, the cat surveyor. Contrary to anticipation, th dition of the south-west tower was found as bad as that of the north-west, and w some places, and, although the bells ha been rung since June, 1924, the old crac still widening and new ones are forming 100 ft. from the ground. Holes were foun enough to insert an arm, and stones are s that they could be easily lifted out.

St. George's Hall, Liverpool: Present-day view of Plateau, looking towards Art Gallery.

ARCHITECTURAL ASSOCIATION

GARDEN DESIGN.

n Monday evening Mr. J. Alan Slater, ., F.R.I.B.A. (President), presided at a ral meeting of the Architectural Associa- at 35, Bedford-square, W.C.1.

he business items on the agenda were through by the Honorary Secretary (Mr. J. T Lutyens). These included the ion of the following new members:— rs. T. M. Daniel, E. G. Stevens, R. H. stler, M. Rowell, and S. Davidson, Miss Maitland and Miss I. M. L. Boon.

r. Gilbert H. Jenkins, F.R.I.B.A., then a paper on "Garden Design," which he rated with a number of lantern slides ing views of some well-known gardens in country and on the Continent, and also modern gardens designed by Mr. Guy ber. Mr. Romaine Walker, Mr. Philip n, and others.

er some interesting historical remarks, id the improvement in the design of the ry house—both large and small—marched that of its garden, the one being comple- ary to the other. The attention given in design of the house to good planning, osition, suitable material, and texture reflected in the design of the various tectural and horticultural details of the ns, and the standard was raised to so an extent that English homes and ns became famous the world over.

a good example of the modern garden of ar days attention seemed to have been ed on giving the house a good setting and ding for it some interesting views, with iful flowers in well-planned beds as a round, and a well-kept lawn occupying iddle distance, all more or less formally ned and having a considerable amount chitectural detail to set them off. Stone ick-paved terraces with balustrades and ons, cunningly planned flights of steps, ittle pools and rills edged with stone were es of the design. The pergola was im- from Italy, and the yew hedge had back as the best of all backgrounds for ying the glories of an herbaceous border l bloom. Care was taken to prevent the garden being seen at a glance from the e, and the approach side of the house ept more solemn and was entirely cut off the pleasure garden. Vistas were care- preserved, and the main garden was a frame of flowering trees and shrubs.

e away from the house the treatment ess architectural, and one found a hill- aid out as a heath garden or a valley into a semi-wild water garden. If rterre were not treated as a rose garden, ould be found on one of the main axes ich the various units were strung, and nds of special gardens for different s of the year were contrived, care being in the lay-out to make a general tour garden interesting at all times. A well- d enclosure was arranged for the glass. in the grass carpeted the orchard, and ry hand it was impressed on the visitor e same care had been bestowed upon tails as upon the general lay-out. The es of trees, shrubs and plants ran into nds, and much thought was evidently ed in making fine colour harmonies and ts.

critical might consider that there were lden dangers in the style, which might ally ruin it. The first danger was that den tended to become too architectural much paving and balustrade, too many s in the way of curved steps, cleverly l pools, and garden ornaments; the was that there was almost too great h of new trees, plants and shrubs, and ndeavour to display them all a restless was at times produced and beauty in den, when viewed broadly, was sacri- botanical interest. From this point , in a large garden, the idea of having little gardens for one or more species ts was all to the good. A really first-rate garden would no doubt combine both interests and make the artist rave over its loveliness while the botanical expert would be lost in admiration at seeing the rarest flowers and trees growing to perfection, but such a garden was very difficult to find.

Since the war it had been necessary to reduce the cost of upkeep, and this must have an influence upon design. The area of mown grass must be lessened (though the motor-mower had gone far to solve the labour problem here), flower beds must be planted in such a way that it would be unnecessary to fill them with bedding plants raised laboriously from seed and planted out twice a year. Beds of flowering shrubs were replacing flower beds, and those who wished to minimise their labour bill would not start a large rock garden stocked with rare alpines.

Again, the vogue of lawn tennis had resulted in a desire that the court should be possible for play all the year round, and many varieties of hard court had been evolved. These, with their enclosing nets, were all ugly, and therefore the tennis court no longer occupied the lawn but was tucked away in a corner and planted with shrubs. The end planting should be a solid wall of green to enable the flight of the ball to be accurately judged, and the axis of the court decided by the time when it was to be used; if in the morning the long axis would be east to west, but for the afternoon and evening north to south. The spectators' pavilion should be at one end—east in the first case and south in the second—so that eyes were not tired by the glare of the sun. If it were placed at the side of the court a closely contested first-class match would give the onlooker a stiff neck.

From the first stages of the design consideration should be given to the period of the year at which the garden was to look its best, for usually the house was occupied more at one or another period of the year, and the planting scheme for a villa at Cowes should be completely different from that for a house in the shires. Possibly the best garden of all was that which had something beautiful to see in it at every season of the year. By concentrating effects in different parts of the scheme, the fact that one part was out of flower only enhanced the impression produced when one passed through into another section where everything was in full bloom.

Often there was a wood adjoining the garden which it was desired to incorporate within it. Such a wood properly thinned out made a splendid place to grow primulas, lilies, azaleas, rhododendrons, and many a plant which loved semi-shade and which would thrive better than if planted where they were scorched by the sun and suffered from the wind. In arranging for this work the wood should be carefully examined to determine the best vistas and focal points; the undergrowth should be cleared away, along and around these, before a general clearance took place, as the remaining scrubs and bushes would serve as rough models and give some idea of the eventual effect to be obtained. Some tree felling would doubtless be necessary, and this would be more effective if it left different kinds of trees as the dominant note in each section, so giving a pleasing variety to the woodland walks. Thus, deciduous trees would be cut down in some places and conifers in others. All the main outside trees must be left standing, as if these are removed it was more than probable that the whole wood would gradually blow down, as the inner trees had not the same root-hold and had not been accustomed to withstand gales.

The paths in such a wood should be pegged out on the spot, it being impossible to represent on a plan the varying shapes of the trunks and main limbs of the trees; 4 ft. 6 in. was a good minimum width, but one path might be 8 ft. to allow for carting. As the trees were certain to be irregular, absolutely straight paths would be out of place, but it would be found possible to maintain a vista along a path without making it look as though laid out with a ruler. Generally speaking, these paths should always be carried under the trees, as the spaces between them were required for the planting. Few shrubs or plants could be induced to grow under a well-grown tree, so the paths were better placed there. Nothing at all would grow under chestnut or a group of beech trees, and Scotch firs presented the same difficulty. Oaks, young lime trees, and birches made an excellent combination with such trees as the silver fir, Douglas pine, and old established free-growing yews or hollies, and should all be retained. Open spaces here and there with a wide grass walk or dell would improve the scheme enormously by preventing a monotonous effect. The top spit from the paths could be used to raise the ground here and there, so as to aid the shrubs in more quickly dividing the wood into sections.

To be able to see through the wood from end to end not only greatly reduced the scale but ruined the effect of the ever-varying series of pictures which might be obtained by shutting out any lateral views except where cross paths tempted the visitor to further exploration.

Some of the vistas should be as long as possible and should have arresting features at their ends to focus the vision—be it distant landscape, summer house, statue or a picturesque peep of the house. The other walks could be made to wander through the wood, passing here and here under a closely spaced group of trees. The bare trunks when silhouetted against the light would give strongly defined shade and act as a frame or foil to the flowers or the brilliant colours of the sunlit foliage beyond.

If there were sufficient space there should not only be a path running right round the wood, with possibly a straight central walk, but intermediate paths winding through each section. This would enable the walks to be varied to such an extent that the wood would seem to be far larger than where there were only two or three alternative ways to go and return.

The paths themselves should be hard gravel rolled in solid and then left to fade into the wood by allowing the fallen leaves to lie on it and form a carpet of russet or gold. Pine needles served a similar purpose near the conifers. Occasional cleaning would, however, be necessary.

Having cleared the wood of superfluous trees and undergrowth, the ground should be double trenched throughout and ditches cut where required for drainage.

Discussion.

In proposing a vote of thanks to the lecturer, Mr. Inigo Thomas said the best phase of the country house, when it was the centre of the business of the owner, who lived in it practically all the year round, had passed; now these houses were only used occasionally. The result was that gardens were now only planted to be interesting at certain times of the year, instead of all the year round.

Mr. J. M. Dawson, in seconding the vote of thanks, drew attention to the Achilles statue at Hyde Park Corner, which was, he said, now hidden by two trees which would be better removed.

Mr. Stevenson, Mr. Harding Thompson, and the Hon. H. A. Pakington also spoke, and, in replying, the lecturer referred to an estate development at Upper Woodford, Surrey, in which the owner had adopted novel methods of preserving the rural nature of the district. Before a plot was sold no less than 50,000 trees, plants, and shrubs were planted to act as a screen between the various houses. Along some of the roads 10,000 rose trees had been planted, while other roads were planted with silver birches and bulbs to produce a good effect in spring. Hundreds of flowering trees had been used along other roads. Not a single fence or wall was allowed to be built by the purchasers of the plots to divide the properties. The result was unique and fully realised the aims of the developers of the estate in retaining the atmosphere of the countryside.

L

THE ARCHITECTURE CLUB

On Tuesday last, at the Savoy Hotel, a complimentary dinner was given by the Architecture Club to the Royal Commission on Cross-River Traffic in London. Mr. J. C. Squire, President of the Club, presided, and the following members of the Commission were present:—Lord Lee of Fareham, Sir Lawrence Weaver, Sir William Plender, Professor C. E. Inglis, and Mr. E. G. Howarth (Secretary). Among others present were Lord Gerald Wellesley, Sir Reginald Blomfield, R.A., Sir Giles Gilbert Scott, R.A., Sir Owen Williams, Professor Patrick Abercrombie, and Messrs. Maxwell Ayrton, R. S. Bowers, Darcy Braddell, H. P. Cart de Lafontaine, E. G. Culpin, W. R. Davidge, Arthur J. Davis, Matthew J. Dawson, Rudolf Dircks, A. Trystan Edwards, J. H. Elder-Duncan, Joseph Emberton, W. A. Forsyth, G. Alan Fortescue, J. M. Gatti, J. Frederick Green, Stanley Hamp, E. Vincent Harris, W. Alexander Harvey, William Haywood, H. Duncan Hendry, Arthur Keen, Geoffry Lucas, Ian MacAlister, D. S. MacColl, Alister G. MacDonald, H. P. G. Maule, Oswald P. Milne, W. G. Newton, A. R. Powys, Stanley C. Ramsey, H. J. Rowse, Harold Stabler, G. S. Swinton, Walter Tapper, A.R.A., and F. W. Troup.

The loyal toast having been honoured, the Chairman, proposing the toast of "The Royal Commission on Cross-River Traffic," recalled that two years ago, when they met together at dinner, Waterloo Bridge seemed to be seriously in danger. As a result of much agitation, in which the Club took part, a Royal Commission was appointed to consider not only Waterloo Bridge but cross-river traffic as a whole, from the æsthetic as well as the utilitarian point of view. The Commission had produced a Report which, except in a few minor particulars, was as good as they could possibly hope for. The Prime Minister had indicated in the House of Commons that the Government would contribute substantially towards the cost of carrying out the recommendations of the Report, and it now looked as though, stage by stage, the schemes outlined would be put into effect.

Lord Lee of Fareham, in reply, said that in three, four, or five years' time London traffic would be doubled, or even trebled, and there was no room at present for the great mass of vehicles which we had on our streets. There was no time to lose, because the creation of transport facilities took time, far more time than it took to create a fleet of omnibuses. As a Commission, he continued, they were reasonably gratified at the Prime Minister's recent announcement of the Government's views on the proposals of the Commission. They might have, however, some tinge of regret about the vagueness of the Government's approval of certain of their suggestions, and regarding the Government's contention respecting other proposals they felt that visibility was bad. So far as Central London was concerned, the Commission regarded the general statement of the Government policy as being reasonably satisfactory. The approval in principle of a new Charing Cross Bridge was gratifying, and they made no complaint of the qualification that the technical matters involved should be the subject of further inquiry. As regards the proposed Ludgate Bridge, he felt sure the City of London would gladly rise to the occasion and do everything possible to accept the view of the Commission and the Government in regard to this project. In conclusion, he appealed for co-operation all round. What was needed was that all the authorities concerned should make their common contribution to the common pool in the interests of London as a whole.

Professor Patrick Abercrombie, proposing the toast of "The Guests," said he felt that the Report of the Royal Commission was satisfactory for two reasons: (1) The unanimity with which the Commissioners had made their recommendations; and (2) the Report was favourable to the things in which they as a Club were interested. The Report recommended the retention of Waterloo Bridge, abandoned the St. Paul's Bridge project, and recommended a double-deck bridge at Charing Cross. He thought it was perfectly feasible to have a double-deck bridge which would provide a satisfactory solution of the traffic problem and be even a great work of art. Here was the opportunity for a great national competition to elicit a design which would be a national monument. He regretted that the Commission had been rather limited in its outlook with regard to London. Traffic was only one of the many problems before us to-day. He was not sure that there ought not to be a Royal Commission for the Suppression of Traffic. What was happening, he continued, was that we were trying to cure an urban gangrene by a series of minor operations, and neglecting the root of the disorder. Traffic should be studied from the point of view of town planning. Was it not possible to attempt some process of decentralisation of industry to save the enormous number of journeys that people had to take in going to and from their work? It might be possible to tempt the industrialists to move outward by cheaper land and facilities at their door. We could not afford to count the cost of these things; in the long run it was the only way of saving money.

Mr. J. M. Gatti (Chairman of the London County Council), in reply, said, with regard to Waterloo Bridge, that if leaving an arch at either end and rebuilding between in some other form was regarded as a satisfactory solution of that particular problem, then he had nothing more to say. He did not know what attitude the L.C.C. would take up with regard to the Commission's recommendations. All he could say was that they (the Council) were practical men, and if the Report was not carried out it would not be because of any obstruction on their part. They of the Council were not unmindful of artistic considerations. But he did not believe that art should be separated from other functions that had to be performed. Art should be balanced with utility. They were willing to co-operate and to examine and re-examine the problem, in the hope of finding a solution.

ROMAN REMAINS FOUND NEAR THE BANK

An interesting discovery, it is reported, has just been made in the City of London, of Roman remains said to date from the first century. Reconstruction is being carried on in Founder's Court, close to the Bank of England, under the supervision of Major Douglas Wood, F.R.I.B.A. In order to reach solid foundations it has been necessary to dig below the course of the river Walbrook. A few days ago Roman paving was discovered. This appears to be part of a causeway, possibly used by persons on their way to the river, and slopes steadily downwards. Remains of Roman pottery have also been found, in some cases below the level of the causeway. An archæological expert, it is understood, assigns much of this to the first century. Some of it is of the variety known as "sealing-wax" pottery, from the fact that in colour and texture it resembles sealing-wax.

A piece of Roman pavement, apparently the corner of a room, has also been found in the course of underpinning operations. No attempt can be made to find the rest of the house or even of the room, since the site is shut in by other buildings. It is not an elaborate mosaic, being composed chiefly of small red tiles with a few black ones at intervals. Underneath the pavement were found several pieces of pottery of the first century. This may possibly be part of the Roman pavement which is recorded as having been discovered at Founders' Hall. It appears to belong to a house which stood on the bank of the Wall brook.

AMERICAN APARTMEN HOUSES—XI

By F. E. BENNETT, A.R.I.B.A

LIVING ROOMS.

The living portions of a flat may in living-room or "salon," dining-room, lib hall or "foyer," conservatory, coat passages.

The living portions are usually kept tog and quite separate from the remainder of th In the smallest flats, where there are only rooms and no space for a kitchen, a "kitchen is placed on one side or the end of the li room.

The normal height of these rooms in good is 9 ft. 6 in. to 10 ft. in the clear. (Figs. 3 31 of part VII show an example of a living- 18 ft. high.) The sizes are:—Living-r minimum 12 ft. 6 in. by 20 ft., maximum by 30 ft., average 14 ft. by 17 ft.; dining- about 20 ft. by 20 ft.; passages 6 ft. windows about 4 ft. 4 in. by 4 ft.; lib about 13 ft. by 20 ft.; hall, various. T rooms are heated by radiators and commun with one another by arched openings r than doors. Sometimes one fireplace is vided in the living-room. No space in the is provided for coal storage, wood being us burnt in the fireplace.

It is always considered desirable to the dining-room directly adjoin the pa When the kitchen adjoins the dining-room from it are heard through the wall. It is sidered bad to cross the main passage fro kitchen or pantry to the dining-room. A room fitted with w.c. and lavatory basin ne entrance hall is included when possible.

Dining-rooms are given no more natural than required by law, and are often made t on a rear court.

Halls may be in the dark space of the pla are sometimes made larger than necessa use up some of this space. This arrangem possible because of the liberal heating arr ments, allowing an arched opening betwee hall and one or more of the living-rooms certain amount of secondary light is al for halls and passages. The front entra made as near the living-room as possible. a rule that every flat must have its own however small.

Interior decoration is not a subject which much need be noted. Much of the in tion for the designs executed has come England. All the known styles, Europea Asiatic, have been drawn upon freely for

In the designing of the steelwork care is to arrange the beams and girders so that cornices caused by them balance one a properly inside rooms. The standard wall is simple plaster with buff or cream pain light wooden panel mouldings applied surface. Ornamental metal brackets for wall lights are a usual feature and a part permanent structure.

In reply to an enquiry from Mr. Langto concerning the position of incinerato American apartment houses, Mr. F. E. B writes as follows: "Incinerators are placed in or near the kitchen. This sys rubbish disposal is not at all uncom New York apartment houses, but all are do not care to use it. I was told person some occupants of flats that it worke so far as they were concerned. Othe smoke came up through it. Apparently not a good thing, unless tenants can be upon to use it properly, *i.e.*, wrap u rubbish first and not throw combustible into it."

Mr. Langton Cole comments on this r follows: "Personally, I agree with architects who do not like the incinerato My experience has been with dust sh old workmen's dwellings, which we have blocked up. The trouble is that, after dust collects in the opening, so that the cannot be conveniently closed, and the do not bother about it, so that draught smell of old dust come into the dwelli course, carrying down dust is a nuisance seems to be the only remedy."

WALES INSTITUTE OF ARCHITECTS.

olonel E. H. Fawckner, R.E., T.D., , Chairman of the Eastern Branch, over the sixth annual dinner of the Branch of the South Wales Institute of at Newport on the 11th inst. ng to the toast of the "R.I.B.A. and eties," Mr. C. F. Ward, F.R.I.B.A., of the South Wales Institute of Archi- that 75 per cent. of buildings were not designed by the profession. Fortunately the Press generally had now taken an interest in the preservation of beautiful scenery. The Royal Institute and Allied Societies endeavoured to create a good feeling and improve the profession. A Bill had been promoted in Parliament for registration, and the stage had now been reached when everybody interested in architecture could help to get local Members to support the Bill in the House of Commons. It was quite a short Bill, not intended to raise their fees, but to promote education and to protect the public. As architects they had an arduous duty to educate the public. Recently the Prime Minister had thought fit to appeal for the preservation of old cottages. The President of the Royal Institute, Mr. Guy Dawber, had brought together many societies which were out to preserve the beauties of rural England.

Lieut.-Colonel E. H. Fawckner, R.E., T.D., F.R.I.B.A., said they were very proud of Mr. Ward as their President for two years. They could not have had a better or more active President. The South Wales Institute was numerically far stronger now than it was in pre-war days, and much of the success was due to Mr. Ivor P. Jones, the Hon. Secretary.

The toast of "The Visitors" was given by Mr. Frank Swash, F.R.I.B.A. Mr. H. Teather, F.R.I.B.A., Chairman of the Central Branch, and Mr. Ivor P. Jones responded.

At the annual general meeting of this Institute, held on the 17th inst., the following officers were elected: President, Mr. C. S. Thomas, F.R.I.B.A. (of Swansea). Vice-Presidents, Mr. C. F. Ward, F.R.I.B.A.; Mr. T. Alwyn Lloyd, F.R.I.B.A. Hon. Treasurer, Mr. H. Teather, F.R.I.B.A. Hon. Auditor, Mr. J. Herbert Jones, F.R.I.B.A. Hon. Librarian, Mr. R. H. Winder, A.R.I.B.A. Hon. Secretary, Mr. Ivor P. Jones, A.R.I.B.A.

MEETINGS

FRIDAY, *March* 25.

London County Council School of Building.—Distribution of Prizes. At Ferndale-road, S.W.4. 7 p.m.

SATURDAY, *March* 26.

Incorporated British Institute of Certified Carpenters.—Annual Dinner. At Carpenters' Hall, E.C. 7 p.m.

Institution of Municipal and County Engineers.—S.E. District Meeting. Rochester. 11 a.m.

Institution of Municipal and County Engineers.—Joint Meeting of the Yorkshire and North-Western Districts, in conjunction with the North of England Division of the Town-Planning Institute At the Town Hall, Manchester. 2.30 p.m.

Institution of Civil Engineers.—Visit to the works at West India and Millwall Docks.

MONDAY, *March* 28.

London Society.—Visit Southwark Cathedral, 3 p.m.

Royal Sanitary Institute.—Mr. J. H. Clarke on "Water Supply." At 6 p.m.

Royal Institute of British Architects.—Election of Royal Gold Medallist. 8 p.m.

WEDNESDAY, *March* 30.

Institution of Civil Engineers.—Mr. V. F. Cornish on "The London County Council Becontree Housing Estate." At 6.30 p.m.

Joint Delegation of the Local (Yorkshire) Associations of the Institutions of Civil, Mechanical, Electrical, Municipal and County and Locomotive Engineers.—Discussion on "Railways or Roads." At Mappin Hall, St. George's-square, Sheffield. At 7 p.m.

THURSDAY, *March* 31.

Society of Antiquaries of London.—Mr. J. Graham Callander on "Recent Archæological Research in Scotland." At 8.30 p.m.

Faculty of Architects and Surveyors.—Meeting. At Charing Cross Hotel, W.C.2. 2 p.m.

FRIDAY, *April* 1.

Royal Institution of Great Britain.—Mr. J. Allen Howe on "Stones of London." At 9 p.m.

Royal Sanitary Institute.—Mr. A. J. Martin, on "Sewerage." At 6 p.m.

"LONDON SQUARES AND HOW TO SAVE THEM"

UNDER this title the London Society has published (price 1s. 3d. post free) a well-produced booklet dealing with the important points raised by the loss of Mornington-crescent and Endsleigh-gardens, and the attempt to build on Brunswick and Mecklenburgh-squares.

The whole problem of the London garden squares has been brought to the fore in recent years, first by the erection of great buildings on the open spaces of both Endsleigh-gardens and Mornington-crescent, and secondly by the action of the Beecham Estates and Pills Company in promoting a Bill to move Covent Garden Market to the site of the Foundling Hospital, involving, apparently, the absorption of the garden grounds of both Mecklenburgh and Brunswick-squares. This proposal aroused an intense opposition, not only from the residents in the Bloomsbury neighbourhood, but from the tenants of the present market, as well as all the principal authorities affected by the proposed removal, including the London County Council (which is the town-planning authority for the whole area), the St. Pancras and Holborn Borough Councils, the Westminster City Council, and many of the leading societies interested in the amenities of London, with the result that the Bill was withdrawn.

The Foundling Hospital site has therefore been saved from conversion to a market, and it is very certain that other commercial enterprises will hesitate before seeking to introduce any undesirable element into the quiet backwaters of Bloomsbury. The Foundling site, however, is only one of the many London squares, and it will prove intolerable if a pitched battle has to be fought over every square to preserve amenities that should be patent to the whole country, as in the case of Leicester-square in 1863, and more recently Edwardes-square and the Foundling Estate. In view of this, it is good to see that Mr. Scurr, Sir James Remnant, Sir Henry Jackson, Mr. Dalton, Mr. Harris, and others, representing all parties, have introduced a second Bill—a previous one being set aside—into the House of Commons, prohibiting the erection of any building or structure in any garden square in the administrative county without the sanction of the London County Council. Such sanction may, however, be given subject to such terms and conditions as the Council may think fit to impose.

It is greatly to be hoped, in view of the considerable publicity given to the Bloomsbury question and the consequent enlightenment of the public as regards the value of town-planning both to commerce and to health, that this Bill has an easy passage through the House.

This booklet is one of which the London Society has every right to be proud. The letterpress is divided into five chapters: Saving the Squares, the Story of the Foundation of Captain Coram and the Adjoining Squares, the Story of Covent Garden, the Town-planning Question and the Legal Question, while the whole is illustrated with reproductions of prints and photographs of an interesting nature. In its pages is given the whole history of the London squares, of which there were in 1905 437, from their inception to the present day, and it makes very clear—if, indeed, such information can still be required—that the tendency of the squares to dwindle away, as in the case of Mornington-crescent and Endsleigh-gardens, must be checked with a firm hand.

"The development of London of the future," concludes the booklet, "can only be properly controlled by the exercise of full town-planning powers over both the built-up as well as the undeveloped portions: powers that will cover all such problems as the situation and distribution of markets and the saving of the lesser lungs of London, to which the attention of Londoners is being specially directed at the present moment."

Two Pencil Sketches.

We reproduce this week two pencil sketches of picturesque old "bits" in London and Bristol by Mr. Joseph Pike.

New General Post Office, Singapore.

This building has been designed to house the Post Office and certain other Government departments. The materials are reinforced concrete, with a facing of masonry and brick. The building has been planned to give the utmost light and air, and also with a view to providing the necessary shade from the tropical sun, a deep verandah being provided all round the building. Major P. H. Keys, F.R.I.B.A., is the architect. Other illustrations of this building were given in our issue for July 28, 1922.

Housing Scheme, Southampton.

This is an enterprise carried out entirely by an architect, including acquisition of land and the actual building operations. The scheme comprises about 50 houses and flats of Georgian character, disposed in groups varying from two to eight. A quadrangle, Highfield Close, consists of houses and flats with an ornamental garden and central artificial pond with running water harnessed from an existing stream. On part of the estate the houses have stucco wall surfaces finished with a coarse stipple, the roofs being covered with red Roman tiles. On the other part of the estate the walls are finished externally with grey bricks of good texture with red dressings, the joints are struck with a pebble, and the roofs are covered with rustic plain tiles.

Mr. Herbert Collins is the architect.

Messrs. Staggs' Premises, Leicester-square.

This work shows the transformation of what was a very ordinary type of building into one of considerable architectural attractiveness. The elevations of the old building had a good deal of not objectionable but rather superfluous ornament. This has been removed and the whole facades have been repainted in cheerful colours. Shutters have been added to the top-floor range of windows, while the roof line has been improved by the addition of end pavilions treated in the Pompeian manner. This work has been carried out under the direction of Mr. H. Austen Hall, F.R.I.B.A.

Studio, Blackhill.

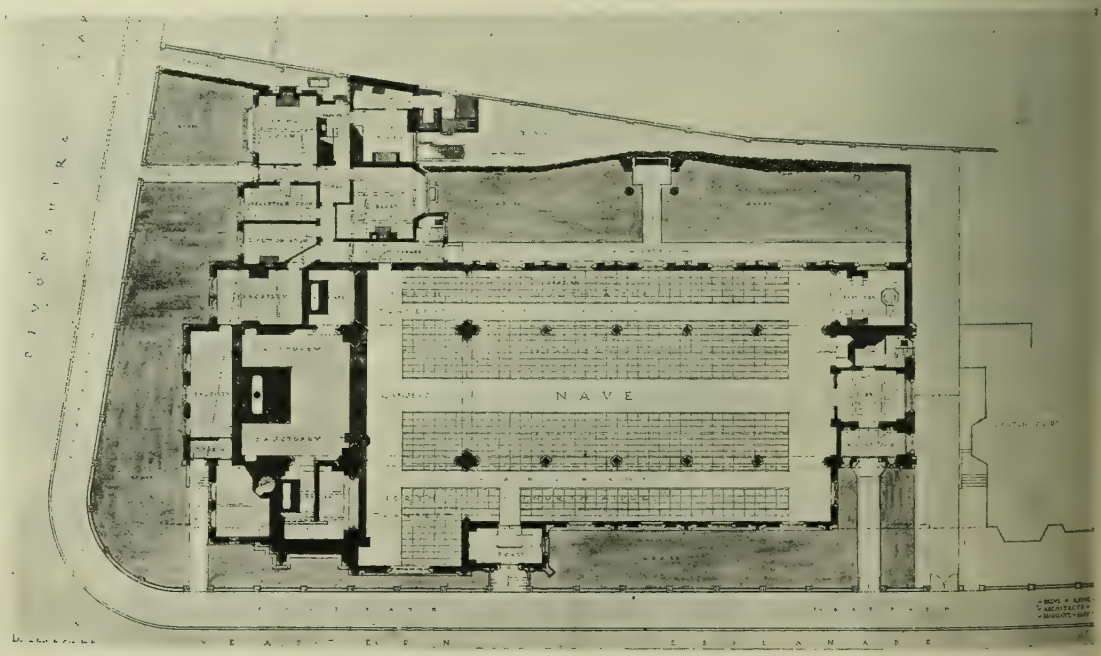
This picturesque little building has been designed by Mr. Oliver Hill, F.R.I.B.A. Features of the exterior are the staircase approach to the first floor level, the balconied window to the studio, and the architectural treatment of the chimney stack.

St. John's Church, Edmonton.

We illustrate this week the completion of this church building scheme, which was instituted originally by the Rev. H. E. Bird. The church, hall and vicarage are linked up by a cloister. The parish is a poor one, and the buildings had to be simple in character. Walls externally and internally are faced with the local yellow stock bricks of mixed colours, bonded occasionally with grey Luton bricks, copings and set-offs being in blue Staffordshires.

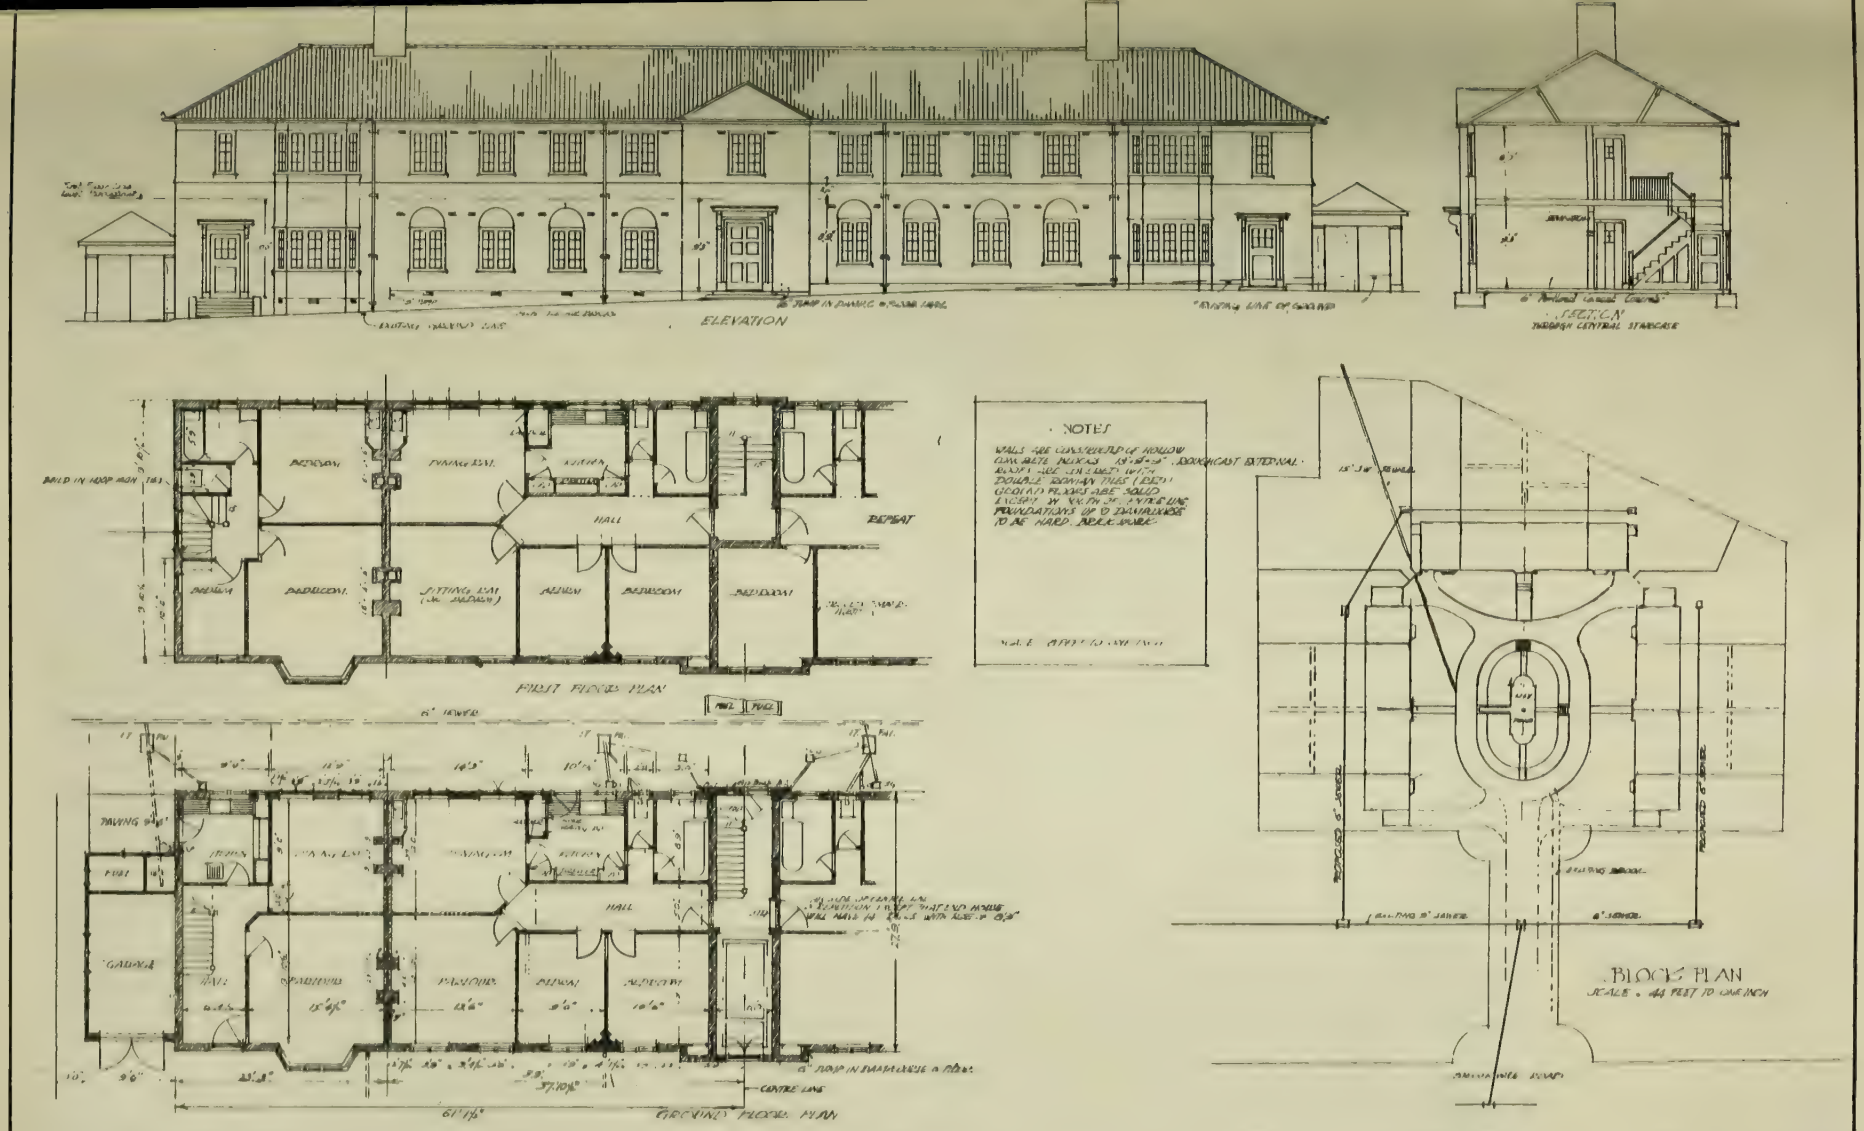
The builder was Mr. Albert Monk, of Edmonton. The roofs are covered with tiles supplied by Messrs. Tucker, of Loughborough. Casements were supplied by the Crittall Manufacturing Co.; glazing by Mr. Paul Woodroffe, Campden, Glos., and ventilating and heating by Messrs. C. Kite & Co., a Brightside Foundry Co.

We also give some further views of the at Mason's Hill, Bromley, an exterio and a plan of which were illustrated in issue.



Mr. C. H. B. Quennell, F.R.I.B.A., architect.

House at Woldingham.



This house is in course of erection f D. Yeo, on a site of nearly four acres, View-road, about 900 ft. above sea leve ground has a fall of one in four to the west, and a fine panoramic view is ob The entrance front faces north-east. A extending the full length of the hou side buildings is to be built on the front. The dining-room and lounge are by folding doors, and access to the room is obtained through a covered The kitchen quarters open off a service which screens the dining-room and hall, which the tradesmen's entrance and staircase are placed. A covered way access to the outbuildings and garage. first floor a pass door cuts off the se bedrooms and bathroom from best bed &c. The servants' bathroom will be with bath, lavatory basin, w.c., and maid's sink. A feature of the first flo be the gallery, having an open firepla lighted by three dormer windows. A room," 45 ft. long, is provided in the re approached from the service stairca addition to the open fireplaces there central heating throughout. Hot and water will be laid on to lavatory ba bedrooms. The external door and w frames, the stairs, internal joinery to h principal rooms on ground floor, and the and first floors will be in oak. Other i joinery is to be in Douglas fir. The h be panelled in oak. The bathrooms wi tiled floors and walls.

The contractors are Messrs. J. A. P Co., of Warlingham. The walls, whi hollow, are faced with Messrs. T. L. Law sand-faced bricks; Sussex stocks being dressings, quoins, bands, &c. The roof covered with Collier's hand-made tiles Messrs. Stirling & Johnson. The ste ments and leaded lights are being supp Messrs. Henry Hope.

Mr. C. E. Hanscomb, F.R.I.B.A., of stead, is the architect.

St. Anne's R.C. Church, Cliftonville, Margate: Plan. MESSRS. REEVE & REEVE, Architects.

TOWN-PLANNING INSTITUTE

Decentralisation.

At a meeting of this Institute held on Friday ast, at Caxton Hall, Westminster, Mr. R. H. Davidge (President) took the chair, when Alderman E. G. Culpin, L.C.C., read a paper n this subject. In the course of his address, e said decentralisation was in the natural ourse of progress. In the early days con-entration and centralisation were necessary or the perfecting of the organism. Consolida-ion followed, but then came the stage when the rue expression of the original idea was only btained by decentralisation and dispersion. The history of society from the first cluster of wellings at road junctions, the ford of a iver, a convenient fishing spot, or a place for efence or refuge, growing for purposes of utual help into the hamlet, the village, and he small town, was a complete analogy. The oming of steel, the growth of mechanical ndustries, enormous expansion of many towns, et up movements which converted this country rom a pastoral into the first manufacturing ation of the world. Without Public Health cts, without building by-laws, the newly rowing towns pushed out in every direction nean streets of mean houses; like a foul ctopus extending its tentacles everything ithin reach was covered. Objects of historic nterest or natural beauty disappeared before he on-rushing wave of brick and mortar. The ealth or convenience of the inhabitants seemed ardly ever to be thought of; men had become hands" for whom some shelter must be found o secure their labour; the only thing that emained sacred was the amount of profit which he individual owner could get out of his ndividual piece of land. The country town hich grew up around the church and market lace entirely changed its character; the old orld beauty which the art of designer and raftsman had fashioned out of local materials radually disappeared to make room for the ordid monotony of alien construction. The hronging thousands who, attracted by a new rage scale peopled the new mill and factory own, over-ran the provision, and they got the rowding of people in the houses, of houses on he site, and streets on the acre, with a tragic ale of disease, death and inefficiency revealed y every medical officer's statistics.

It was from this concentration that they ould trace most of the urban evils from which re suffer to-day in the way of slum areas, and hose tortuous thoroughfares which had so mphasised the necessity of town planning. or the purposes of the paper he must confine imself to the problems of London, but in a reater or lesser degree the principles would pply to the whole of the country.

It was difficult to say at what point the olicy of centralisation should stop; difficult o put a term for the growth of a town. The uilding of huge blocks of tenements would ot solve the problem even if they be as attrac-ive as those in Vienna and as high as those he L.C.C. are proposing in the Ossulston-street rea. Despite his enthusiasm for the cottage, ard facts caused one to recognise that under he existing order of things tenement dwellings ust for some time be a necessity in certain onditions, but he asked that it might be ecognised when they were provided that they ere only a make-shift and a poor alternative o the cottage solution. Vertical expansion as definitely wrong from a public health point f view; lateral expansion was impossible; herefore decentralisation must follow.

First they must clarify their ideas as to what ecentralisation meant as applied to the pro-lem which they had to face. At the present ime the L.C.C., principally responsible for ousing work within its area, was faced with he necessity of providing something like 7,000 houses a year to accommodate the normal ncrease of population, and for that purpose ome 2,000 acres of land must be provided early. The in-county land had, for practical urposes of housing on a large scale, long been xhausted, and they had the estates of Becontree, ,800 acres, Downham, 500 acres, Hendon, 650 acres, and Morden, 750 acres, rapidly being developed to provide for the accommodation of the many, many thousands of people who had applied for houses. But while the individuals whose wants were supplied lived themselves under healthier conditions than their neighbours, the moving of them out merely meant a stupendous increase in the journeys to and fro which had to be made between work and home, and a congestion of all the means of traffic. Therefore, it was not enough merely to take the workers out of their present conditions and give them comfortable houses on the outskirts of London. The new dormitory estates and garden suburbs might for a time serve as a palliation, but as an actual fact they were aggravating the evil, and there was no possible remedy save by the scheme which removed both work and workers far enough from the periphery. Nothing else, therefore, than the full embodiment of a garden city or satellite town would satisfy to-day's needs. And a garden city could not be built merely upon the outer edge of London.

It must not be merely a dormitory; it must combine the requisites of a naturally growing town and provide for healthy living and industry. It went without saying that it must be pre-planned on generous lines and of such a size as made possible a full measure of social and educational life, but when that limit was reached, development must cease. It must preserve to its urban centre that long-denied access to nature by securing a permanent belt of agricultural and park land, and while in the centre they avoided the evil heritages of the towns and made them impossible, on this agricultural belt they must do something towards the solution of the rural problem. Thus the twin problem and evil of centralisation might be dealt with, for while removing surplus population from the centre, they might restore to the countryside the labour so badly needed for food production, and by providing the amenities of the town in a new area they would overcome the social disadvantages which had driven the progressive land worker into the town. Further, as they knew so well in practice, to deal with this area properly it must be under one control, so the land should either be held in trust for the community by a developing company with restricted dividends, or should belong to the public.

For purposes of higher education and some other functions, the population of 50,000 suggested as a maximum would not be sufficient to maintain the necessary services. To complete the scheme, therefore, a satellite town should be established in definite relation to another, so that within a group of satellites—which might well include those growing around the nucleus of an existing small centre—there should be one which should provide opportunities of education, art, drama, &c., for the group. That, of course, pre-supposed scientific decentralisation upon a large scale. There was no reason why existing communities should not be adapted, and although that would present new difficulties, there would be many advantages, and the value of an old tradition would be very potent. Obviously, therefore, some large area was required for an ideal scheme, and it might be definitely established that at least some five miles of agricultural land should divide the new satellites. Urban and rural, the new town, while deriving its life from and to an extent dependent upon its parent body, must develop its own life. engender its own culture, nurture its own tradition. It must not be a village, it must not be suburb, but must grow up in the category of the true hierarchy of English development—the small, self-contained town, purged of its evils and provided with all the facilities for a fuller life that modern civilisation had secured. They had the examples of Letchworth and Welwyn to guide them, which had developed in spite of difficulties. The L.C.C. proposed to build 12,000 houses a year, and its budget provided for something like £6,000,000 for 12 months' expenditure on housing. He suggested that no more economical use of money could be made than the application of these millions of money, and these thousands of houses to the constitution of real satellite towns or garden cities.

From the point of view of pure economy there was no doubt that the transference of certain industries from overcrowded centres would pay many times over, and it might be, as so often happened, the economic urge rather than the humanitarian or æsthetic which would establish a definite move towards garden cities, and that urge might come from the industrial side before the more complex machinery of local government could assert itself. The manufacturer who made his business a science knew what he lost, apart from heavy rent and rates, from the surroundings in which his factory stood, and the homes in which his workers live. The industrial efficiency expert had no shadow of doubt on the subject. Proceeding to deal with the present congested state of London, the author pointed out that 274 accidents occur in the streets each day. The population of Greater London had grown from 6,661,000 in 1902 to 7,733,000 in 1925, and the journeys per head of population were 456 in 1925 as compared with 166 in 1902. The amount spent on these journeys was well over £20,000,000 per year, and if they could secure a practise of decentralisation they would not only save a proportionate amount of the expenditure, which was absolute economic waste, but they would reduce the amount of traffic on the roads and do something to lessen the toll of accidents and deaths.

Having stated his case, and, he hoped, proved that there was a case, what was the method of bringing about this desirable change and what machinery must be employed? As regarded the London area, he believed the L.C.C. could do it. There were difficulties, but difficulties existed only to be overcome. The chief of them was perhaps legislative and administrative. The L.C.C. possessed ample powers under the Town-Planning Act to schedule an area beyond its border for the purpose of creating a satellite it could purchase land, plan it, build houses, provide for factory sites, and so on, but it was still foreign country. The local authority might have a grievance that it had to provide facilities for an interloping population; the promoting authority would be spending its money to create rateable value for another body, and the inhabitants might not take kindly to being divorced entirely from their old home and associations. This last-named, if only a sentimental objection, was a very real one in practice, and he believed that the question of migration could be more easily achieved if, in the early stages at any rate, the new colony could be made a definite part of its parent or a definite satellite. The parent would receive the rates and be responsible for the outgoings until the time when on the same analogy the babe outgrew its childhood and determined to run alone. In this way initial difficulties would be eased, and the financial adjustments which would be necessary could be made comparatively easily.

To do this, London, still using that as an example, must either obtain powers to extend by means of colonies, taking outside areas into the county and leaving gaps between, or there must be set up such a Greater London as would contain such an area that within it should be ample room for the satellites.

A fallacy underlying much of the urban expansion that had taken place in the last fifty years had been the idea that by expanding the borders of a local authority and increasing its population, the administrative cost per head was thereby reduced. This was not borne out by the report of the Royal Commission on London Government, where it was pointed out that the cost of administration in London was the highest of all the cities of England—63s. 9d., as against 48s. 6d. in the six next greatest boroughs. It was difficult to give comparative figures where service provided was not comparable, but an attempt had been made in America, where it was found that there was a steady rise in cost of all governmental services when the population passed 30,000. The 50,000 group cost 3s. a head more than the 30,000; the 100,000 group £1 per head more; 300,000 group £2 15s. per head more; and the 500,000 group £3 5s. more.

The L.C.C. possessed the same powers as other municipal authorities under Section 54 of the

Local Government Act, 1888, of applying for expansion of its area, but as the word in the Statute was "alteration," it would probably be held that this did not apply to discontinuous extension. Perhaps a connecting corridor was theoretically possible, but the difficulties would be great. There was, however, a precedent, for in 1906 Los Angeles provided a "corridor" about 20 miles in length to connect up to the sea and provide its own port, some 20,000 acres of land being so added.

The Garden Cities Association had suggested the following procedure in case of a local authority developing a satellite town:—(*a*) Powers would be exercised by the local authority as a parent company; (*b*) residents in the new area would elect representatives to the local authority; (*c*) at some stage in the development of this new area a local authority would be established as an independent authority and compensation paid to the local authority in respect of its liabilities, &c., undertaken in the development of the new satellite town. This compensation might be on the following basis:—(1) The payment to the parent authority for all the expenses which it has incurred in the establishment of the satellite town. (2) A tribute from the new local authority to the parent local authority. Such tribute could be in the nature of a monetary tribute or the conveyance of certain ground rents; and, further, that the loan capital of the parent authority would be undertaken by the new authority.

The first essential for such a scheme was a proper survey of the needs and possibility of the areas concerned. They welcomed the fact that a beginning had been made with proposals for a regional plan for an area within 25 miles radius of London, inadequate and parsimonious as they were in some directions, but they really required something much bigger than that. To carry things further they needed a country-wide survey and a report upon the development of Britain as a whole. Casual and haphazard policies had brought them to the present position when slum clearance and traffic improvements were well-nigh impossible owing to cost. A national policy which could see national needs, and not merely parochial ones, should prevent these evils in the future. They were already realising that town planning apart from regional planning might be futile; he wanted to lead to the larger issue of country planning, which alone could deal with to-day's evils as affecting the whole country.

But they might hope that the Joint Committee for Greater London may have something definite to say as to areas which were suitable for satellite towns for the Home Counties and as to the means that should be adopted to establish them. When they visualised a 25-mile radius and realised that this overlapped Welwyn Garden City and was on the borders of Letchworth, they could see what possibilities there were. There would be no difficulty in providing sites for some score of real satellite towns in the 2,000 square miles which included on its borders Tonbridge, Guildford, Windsor, Hitchin, and Chelmsford.

For the first time there was the opportunity of making this survey, and they would hope, even against present appearances, that ultimately a comprehensive scheme might be prepared, as was recommended by the Unhealthy Areas Commission in 1920. Who should plan and prepare for this decentralisation? In his book, "Satellite Towns," Mr. Purdom envisaged a Garden City Commission charged with the duty of reporting upon such schemes, assisting in their preparation, supervising their construction, and helping in the finance. It was very interesting to note that, speaking the other day at a meeting in honour of the founder of garden cities, the Minister of Health stated:—"If we could multiply cities of this kind we should be providing the ideal solution of the most difficult problem, the problem of our overcrowded industrial towns. To take the factories to the people in the country, instead of keeping the people round the factories in the towns—that is something that is worth working for. We must educate the public to appreciate the possibilities of the application of the idea on a much larger scale. In that way we shall be preparing the soil for what seems the only practicable development—namely, the establishment and financing of some official organisation to finance, establish, and search out and acquire suitable sites for garden cities, and perhaps to develop them, perhaps in conjunction with existing local authorities, until they are able to stand on their own feet." He suggested that Mr. Chamberlain should draw the attention of the new Joint Regional Committee to this pronouncement of his. Indeed, national resources might be far worse utilised than in the creation of a new post for a Garden City officer, who should be put at the disposal of the Joint Committee and devote himself to the task of dealing with this specific problem. Such an officer would have quite enough to do to report in that way, and if the right man were appointed the expenditure on his office would be the most remunerative investment the Ministry had ever made. They could not over-emphasise the importance of the provision of proper sites; the tragic example of Becontree was sufficient to warn us in this direction; and the necessity of expert advice was pre-eminent.

Mr. Herbert Morrison, L.C.C., in proposing a vote of thanks to the author, said he agreed that the satellite town was that solution for the difficulties which faced them at present. He thought, however, that the fundamental problem which town-planners had now to face was the reform of the structure of local government, and he would like a consolidation of local government as far as he could in one big authority. He wanted a directly represented London municipality over a big area which would town-plan the whole area.

Dr. Raymond Unwin said he had spoken many times in favour of the policy of decentralisation. Some interesting figures had been published recently by Mr. D. Turner, who was mainly responsible for the rapid transit system of New York, and these showed that New York was fifteen years behind the increased traffic. It showed that the problem was not solvable by such means. In London, with three main avenues only east and west, they were allowing the density of building to increase in the central parts, and it was sheer folly to allow this to go on year after year. He believed the only solution was that proposed by Mr. Culpin, and it seemed to him that the difficulties raised by people in the way of this solution were absolute trifles compared with the difficulties which faced them if they did not adopt it.

Mr. W. H. Gaunt touched on the difficulties which beset those responsible for the Letchworth Garden City, and said that in any future satellite town he would like to see the experiment tried of selling land in the manufacturing area, as manufacturers hesitated to put up factories on leased land, whoever the landlords might be. He also considered that satellite cities might be established at a shorter distance from London than 30 miles.

The motion was carried and the author briefly replied.

PAINS AND PLEASURES OF ARCHITECTURE

This was the title which Mr. W. G. Newton gave to a lecture given under the Extra-mural Department of the University of Manchester last week. The lecture was the last of a series of three addresses on the art of building, arranged in conjunction with the Institute of Builders, the Manchester Society of Architects, and the Royal Manchester Institution.

The lecturer dwelt chiefly on the pleasures of architecture, and these he depicted in a series of lantern slides illustrating all periods, which called for little comment or explanation. The larger proportion of these illustrations were of modern houses and public buildings, the lecturer's aim being to show that there was a great deal of modern craftsmanship which was as fine, in its own necessarily machine-based way, as anything which had existed in the past.

Turning to the "pains" of his subject, he remarked that it had been well said that ancient civilisations had been destroyed by imported barbarians. We bred our own; one might see their mean habitations all over the countryside. In two slides the lecturer showed modern types of the "desirable residence," where the chief aim seemed to be for variety at all costs. He had a gentle reproof for certain architects whose reaction from the long rows of identical houses had produced an orgy of "variety" in which not only did every house present a medley of different styles, superfluous decoration, and nailed-on timbering, but in which each house was set at a different angle, which destroyed the symmetry of the road. However, during the last 40 years we had been fighting back to the old standard of beauty.

One of the architect's chief limitations was the size of his drawing paper. He ought to consider not only the house he was building, but the others which were to be built alongside it and those which were already there. In a closely built-up land like our own harmony must come before self-assertion; and we could get harmony without imitation. It was a common error of taste to suppose that everything must be different, either in a single house or in a street. Architecture got its best effects by repetition.

Repose and serenity was a mark of the best English work, old or modern; and for repose repetition skilfully managed was basic. On a larger scale repose rose to stateliness. All about the countryside was a rich heritage of ancestral skill, and it lay largely in the hands of architects to keep this precious heritage alive. Yet the craftsman's part was as important as the architect's: neither could get on without the other.

LAW REPORTS

A Concrete Block Account.

Before Judge Shewell Cooper, in the Mayor's and City of London Court recently, a claim was made by J. A. King & Co., Ltd., 181, Queen Victoria-street, E.C., fireproof slab and concrete block manufacturers, against Mr. B. C. Long, Arden Cottage, Greenford, Middlesex, for £13 14s. 6d. for concrete blocks supplied. Mr. Atkins was counsel for the plaintiffs, and Mr. Thorp represented the defendant.

Judge Shewell Cooper said the whole question was whether the plaintiffs were entitled to act upon the instructions received from Mr. Lord (defendant's builder) on May 10, and whether Mr. Long had allowed the plaintiffs to assume Mr. Lord had authority to order the goods in question. He could not find that the defendant was liable in the circumstances. Judgment was entered for the defendant, with costs.

Goods Wrongly Sold as Proprietary Materials.

In the High Court of Justice, Chancery Division, before Mr. Justice Romer, Messrs. Major & Co., Ltd., the manufacturers of Solignum wood preserving stain, recently applied for an injunction restraining Mr. S. Atlas, builder's merchant, of Hackney, from selling as and for Solignum, goods which were not of the plaintiff company's manufacture. For the defendant it was stated that he did not know that Solignum was a proprietary article, and that in selling what he did sell for Solignum, he was acting in good faith.

Counsel for the defendant raised the question of costs, and asked his lordship to exercise his discretion in view of the statement that the defendant had acted in ignorance. But the injunction was given with costs against the defendant.

National War Memorial, Dublin.

Dail Eireann have agreed, so it is understood, with the resolution of the Free State Senate declaring that a Joint Committee of both Houses should be appointed to consider the Merrion-square (Dublin) Bill, 1927. This Bill, which passed its second reading in the Senate only by the Chairman's casting vote, provides for the erection of an Irish national war memorial in Merrion-square, and the transformation of the square itself into a park of remembrance, which will be opened to the public.

LEGAL SECTION.

NOTES ON CURRENT CASES

Distress for Drainage Rates.

A point may be briefly noticed which was ised in the recent case Rex *v.* Smith *ex rte* Porter (1927, 1 K.B. 478) under the nd Drainage Acts, 1861 and 1918, as ap- ed by local Acts to the area drained by the er Ouse. Those Acts relate to the drainage land for agricultural purposes, and the wers conferred by those Acts were vested the Ouse Drainage Board conferring upon e Board powers of Commissioners of sewers thin their district, including powers to levy es. The Board had made a drainage rate which the applicant Porter was assessed in spect of land in two places within the dis- ct. The applicant had paid the rate in spect of one of these holdings, but for some ason not stated in the report had refused to y in respect of the other property.

Eventually the Board had issued a warrant distress against the applicant, and one of eir bailiffs had seized a horse which was d for £10.

The claim for rates against the applicant mounted to £4 16s. 11d., but the Board imed from the applicant in all £12 8s. 1d., e balance between the two sums being for ts and expenses incidental to the distress, d they retained the sum received from the e of the horse in part satisfaction of the ns due to them. The applicant admitted tain sums, but claimed that the claim for penses was excessive by £6 16s. 8d. The plicant made a complaint before the justices at the costs and charges exceeded the ount allowed by the Distress (Costs) Act, 17, and the Distress (Costs) Act, 1827, t the justices held they had no jurisdiction hear the complaint. The applicant then plied for a rule nisi in the High Court to mpel the justices to hear and determine the mplaint, and that Court had to consider the nts raised by the applicant.

The Distress (Costs) Act, 1817, relates to tress for rent where the amount demanded l due does not exceed £20, and the costs l charges in respect of distress are not to eed the items and amounts set out in the edule. The Distress (Costs) Act, 1827, vides that all the provisions of the Act of 7 shall extend to any distress or levy ich shall be made for (*inter alia*) any poor es or sewer rate where the sum demanded l due does not exceed £20. The Sewers , 1833, section 55, gives the "Court of ers" power "To order and decree that costs charges and expenses of incidental to making and putting in force their orders decrees shall be paid and may be levied raised by distress," and the Sewers Act, , section 7, provides (*inter alia*) that it l be lawful for Commissioners of Sewers proof of non-payment of sewer rates to e their warrant to levy the said sum ums and also the costs and expenses in- ed in obtaining such warrant and in uting the same by distress and sale of the ls and chattels of the person liable to pay rates.

he question involved in the case was ther the two later Acts superseded the rous limits imposed on the expenses of ess by the earlier Acts. The Court, fol- ng the decision of the House of Lords oster *v.* Headland (1906, A.C. 286), where question was decided in reference to poor under the Distress (Costs) Acts and the ress for Rates Act, 1849, but the same ning applied, held that there was no sistency between the Distress (Costs) and the Sewers Acts, and they were ble of being read together, and therefore he cases to which the Distress (Costs) apply the limitations imposed by those statutes still remain, and if in a particular case, although for the recovery of an unpaid sewer rate, the scale prescribed is exceeded, there is nothing to prevent a complainant in reliance upon those Acts going to the justices and asking for the appropriate relief. The case was therefore remitted to the justices with a direction to hear it.

The Private Street Work Act, 1892.

The case Faulkner *v.* Hythe Corporation, which we noted in our issue for November 26, is now reported in full (1927, 1 K.B. 532), but there is nothing to add to our former note except the precise reasoning upon which the Court proceeded. It will be remembered that the Corporation had passed a resolution under section 6 of the Private Street Works Act, 1892, to make up a certain street; the plans and specifications had been prepared and a provisional apportionment had been approved by resolution and published and a copy of the same had been served on the appellant on December 29, 1923. On January 21, 1924, an amended apportionment had been served on the appellant under section 11, but apparently it did not increase the amount of the estimate, as no mention is made of publication of this amended apportionment which under that section would be necessary if the estimate had been increased. On January 23 the appellant, under section 7 by notice in writing, had objected to the proposals of the respondents taking the objection under paragraph (*b*) that the street was repairable by the inhabitants at large.

It is here that the difficulty experienced in this case arose. Objections under section 7 have to be made during a month after publication and the appellant had fulfilled this condition, but the respondents had not at once under section 8 applied to a court of summary jurisdiction to have the objection determined, but had waited until the final apportionment had been served on the appellant under section 12 and then made the application. On service of the final apportionment the appellant had served a notice on the respondents repeating the objection he had taken under section 7. When the matter came before the justices the appellant contended that they had no jurisdiction to determine the objection.

To appreciate the point raised in the case we must first refer to the sections of the Statute. Section 8 provides that "at any time after the expiration of the said month" (that is the month within which objections under section 7 must be made) "the urban authority may apply to a court of summary jurisdiction to appoint a time for determining the matter of all objections made as in this Act mentioned." Then section 12, which relates to the final apportionment in subsection (2), provides that within one month after notice of the final apportionment the owner of premises may by written notice to the urban authority object to the final apportionment on grounds which are different from those which are set out in section 7, and which obviously refer to completed works, for the opening words of this section are "When any private street works have been completed." Then subsection (3) is as follows: "Objections under this section shall be determined in the same manner as objections to the provisional apportionment."

It was contended before the justices that as regards objections raised under section 7 the local authority must take steps to have them determined before the commencement of the works, and that after the final apportionment the only grounds of objection were those specified in section 12, and therefore at that stage the justices had no jurisdiction to hear and determine objections raised under section 7. The justices did not accept that view and a case was stated on the point for the opinion of the High Court.

The Court, constituted of three Judges, was unanimously of opinion that objections raised by frontagers under section 7 must be determined under section 8 before the commencement of the works. The Court referred to sections 9 and 10 and especially to section 11, which all refer to the stage before the works are commenced, and Mr. Justice Salter suggested that sections 9 and 10 should be read before sections 7 and 8. Those sections, as it was expressed by the Lord Chief Justice, close the first chapter of the story, and section 12 then commences with the words we have quoted above: "When any private street works have been completed," and the grounds of objection that can be taken then differ from those which can be taken under section 7. These words, the Lord Chief Justice pointed out, are thus by implication included in section 8, a view which he said was supported by the scheme of the sections and the language used in them, for the objections taken under section 7 are "objections to the proposals of the local authority" not to the works as completed. The Court therefore held that the contention of the appellant was right, the local authority having failed to have the objection determined at the proper time when the works were only proposed, the justices were without jurisdiction to deal with the application. This point has never before been definitely decided, but, as the Lord Chief Justice said in his judgment, it was assumed that the above was a true interpretation in Wirral Rural Council *v.* Carter (1903, 1 K.B. 646); Hayles *v.* Sandown Urban Council (1903, 1 K.B. 169; *The Builder*, February 21, 1903), and Pearce *v.* Maidenhead Corporation (1907, 2 K.B. 96; *The Builder*, April 20, 1907).

The extended report of the case now available throws no light on what the position of the parties is in these circumstances. The frontager, acting strictly within the terms of the Act, raised an objection which, if determined in his favour, would have affected the status of the street (see Wakefield *v.* Cooke (1904, A.C. 31; *The Builder*, December 26, 1903, and our first article on "Making Up New and Private Streets"). If the frontager had been out of time in taking his objection he could not have raised it at all under the Act (Porthcawl Urban District Council *v.* Brogden, 1917, 1 Ch. 534; *The Builder*, March 23, 1917), or apparently in any other proceeding, for section 8 subsection (2) provides "No objection which could be made under this Act shall be otherwise made or allowed in any court proceeding or manner whatsoever." Here, however, it is the local authority who was in default in having the objection determined, and Mr. Justice Avory in the case we are considering held that the words in section 8 subsection (1), "the urban authority . . . may apply to a court of summary jurisdiction to appoint a time for determining the matter of all objections," are mandatory when any objection to the provisional apportionment is raised, and mean "shall apply." The proceedings against this particular frontager appear abortive and presumably he will not in these proceedings be liable to pay his quota of the expenses incurred in making up the street, but had this objection raised by him been adjudicated upon at the proper time and the contention of the frontager been upheld that the street was, in fact, repairable by the inhabitants at large, this would have determined the status of the street against all the world (Wakefield *v.* Cooke), and the decision would have affected all the frontagers in the street.

The position is a very curious one, and we dare not venture to suggest what the ultimate effect of the decision now given may be.

ARBITRATION IN DISPUTES

At an ordinary general meeting of the Institute of Arbitrators, held at 28, Bedford-square on March 15, Capt. W. T. Creswell, barrister-at-law and member of council, delivered an interesting lecture on "Arbitration in Disputes." Opening his paper, the lecturer said that the method of settling disputes between man and man by arbitration or final reference to a third person had been in honourable use from very ancient times. In primitive times the arbitrator's award was no doubt often administered summarily with his club. Plato, in his work, "The Laws," written about 350 B.C., said: "In the first place, there shall be elected judges in the courts who shall be chosen by the plaintiff and defendant in common; these shall be called 'arbiters' rather than judges."

More recently, though still three centuries ago, in Blake's case, A.D. 1606, it was stated that "generally in all actions when damages only are to be recovered, arbitrament is a good plan."

Arbitration, then, was a method by which, in the event of two or more parties disagreeing, the points in dispute were submitted to the arbitrament of a third independent party—the arbitrator—by whose judgment the contending parties agree to be bound. His decision was called the award.

The most fruitful origin was in some agreement or contract which has failed to define the point in dispute with a clearness which convinced both parties of its intended meaning. It was true that occasionally, but rarely, the parties to a dispute might make an oral agreement to submit to the decision or arbitration of a third party; but unless the dispute was limited to some very simple point, men had a natural and wise preference for having the points of difference clearly stated in writing. In fact, oral submissions were not submissions under the Arbitration Act of 1889. Under the Act the submission could be any form of written, typed or printed document or documents, or by mutual bond or by deed, and might be contained in a series of letters between the parties which were submitted to the arbitrator in order that he might construe the exact undertakings set forth therein. It was customary, also, if a submission was once made, to agree to refer all future disputes which might arise from the same undertaking to the same arbitrator. Often, fortunately, the parties at the juncture when a dispute had arisen, preferred to submit to arbitration as being a more expeditious and less costly procedure than resort to the Courts. The County Courts frequently *advised* litigants to go to arbitration, although they could not force them to do so. The High Court, however, had powers now given under Sections 93–96 of the Supreme Court of Judicature (Consolidated) Act, 1925, to refer cases to an official referee, or to a special arbitrator who was conversant with the matters in dispute.

The ultimate benefit from a submission by consent of both parties was, firstly, economy, as avoiding costly litigation in the courts, and secondly, that the arbitrator, discreetly chosen, emanated the right atmosphere for clear and satisfactory consideration and evidence. Arguments which might influence a jury when presented with forensic eloquence by Counsel, were, to use a Yankeeism, "brought down to brass tacks" by the arbitrator's clear knowledge of the technical phraseology and customs of the particular trade or calling within which the dispute had arisen. Counsel was then limited to clear legal argument.

An arbitration was not a valuation, though the two were often confused. The distinction was made thus: If a judicial enquiry was intended by the parties to an existing or prospective dispute, the result was an arbitration; but if a question of values was referred to a third party, for his personal opinion on that point alone, and in order to prevent a dispute arising, the result was a valuation.

The validity of an award was often disputed, not because its ultimate justice was questioned, but because the procedure at the inquiry could be shown to have been irregular. For centuries it had been recognised that a competent tribunal, properly appointed and agreed to by the parties to a dispute, was clothed with all the powers necessary to make and give a final and binding decision on all questions of law, fact, and mixed fact and law, which arise in the course of the hearing.

The importance of an arbitration clause in a contract could not be overrated, for not only was the machinery set up under the Arbitration Act, 1889, as amended by the Judicature Act, 1925, for the mode of procedure on a dispute arising under the contract, but also that for enforcing the decisions when arrived at by the tribunal as a judgment or order of the Court. The grounds on which an award could be set aside or referred back were, shortly:—

1. When the arbitration or award had been improperly procured or material evidence was fraudulently concealed.
2. When there was misconduct on the part of the arbitrator or umpire.
3. When the essentials of a valid award were lacking.
4. Discovery of fresh evidence not known to the arbitrator at the time of the hearing.
5. Admitted mistakes in the award.
6. Evident mistakes.
7. Award judged as illegal by the courts.

Misconduct on the part of the arbitrator or umpire would appear to include:—

1. Failure to decide all the matters referred.
2. The decision of matters not included in the submission.
3. Making an award that is inconsistent, uncertain, ambiguous, and erroneous.
4. Irregularity in the proceedings.
5. Unfairness.
6. Refusing to state a case.
7. Delegation of authority.
8. Acceptance of hospitality from one of the parties.
9. The acquisition of an interest in the subject matter of the reference.
10. Bribery and corruption.

Persons signing any agreement to refer, or to submit, to arbitration, placed themselves under the control of the Act, and more particularly under Schedule I of the Act, unless the Act, as was possible if preferred, was ruled out by the particular submission itself. The obligations imposed on the parties included examination on oath or affirmation, the production of all books, and, in fact, subjection to all and every reasonable requirement of the arbitrator in his endeavour to sift out the truth. This gave the arbitrator great powers, and, indeed, was his main ground of authority in conducting the reference. During the proceedings, either party might require the arbitrator to state a case for the opinion of the Court; and if he refused to do so, the party making this request could ask for the proceedings to be adjourned, so that application might be made to the Court to order him to state a case; and if so ordered, he was bound to comply, but there was no way in which the claimant or respondent himself could compel him to do so.

For some years the Legislature had seen the necessity to provide arbitration under Statute. For instance, the Lands Clauses Act, 1845, which provided arbitration to decide compensation due in respect of the compulsory acquisition of land by some statutory undertaking trading for profit; and later the Public Health Act, 1875, provide for recourse to arbitration in cases of compensation for land compulsorily acquired by a local or public authority or for injury caused by the exercise of powers otherwise given by the Act.

A detailed list of other Acts in which provision was made for arbitration was given.

The lecturer said that he had previously referred to the report of the Committee on the Law of Arbitration. It would not be out of place to touch upon some of their suggestions and findings. As to the time within which an award must be made and enlargement of that time, it was pointed out that an arbitrator at the outset could extend the time for a century, and it was suggested that he should make his award with all reasonable dispatch.

It was suggested that there should be a right of appeal, both in the case of an action stated for the opinion of the Court under Section 19 of the 1889 Act, and in the case of an award stated in the form of a special case under Section 7 and before a single judge. At present there was no appeal under Section 19 from a decision of opinion of the Court, but under Section 7 there was an appeal without leave and there were recommendations as to how such cases could be speeded up.

Further, it was suggested that when two arbitrators were appointed, they must at once appoint an umpire, and that either party could apply to the Court or a judge for the umpire to act as sole arbitrator.

There were, said the lecturer, many other suggestions, especially as to the enforcement of an award, both in this country and on the agent of a foreign party who had represented that party in arbitration in this country.

The Legislature had shown a constantly increasing desire to aid and encourage private arbitration, and this had received the full support of the Courts. This should give the Institute the greatest confidence in its earnest endeavour to build up and strengthen its Corporation and its aim to become a useful factor in the scheme of things.

The President then moved a vote of thanks to Captain Creswell for his masterly and scholarly address, and reminded the meeting that its purpose was in part to initiate discussion. At the next meeting, to be held in April, there would be a discussion, to be opened by Mr. W. Gillbee Scott, F.R.I.B.A., dealing with the report of the Committee on the Law of Arbitration, and he hoped that members would have read the report by that time and come prepared.

Major W. E. Watson, in seconding the vote of thanks, said that Captain Creswell was a recent acquisition to the Council but that already he had been given full scope for his activities on committees whose purposes would be disclosed later. He mentioned that cases were familiar in which both parties to an arbitration came in a friendly manner to the arbitrator and asked for a decision, each party agreeing to pay its own, or a fixed proportion of the total costs. He suggested that such cases should be done away with. Again, in cases where in building disputes, architects were appointed as sole arbitrators, it was put forward in the Report of the Committee that the parties concerned should be able to go to Court and have the architect's authority set aside. Another point suggested in the report of the Committee was that no seal should be required in arbitrations submitted by limited companies. This was a step in the right direction.

Captain S. E. Redfern said that he was afraid that the lecturer and Major Watson had to some extent trespassed upon what Mr. Gillbee Scott would say in April. The lecturer had, however, selected one point of the Committee's Report on the Law of Arbitration which should never have been in: that was, that an arbitrator could with impunity extend the time for award a century forward. He suggested that any arbitrator who proposed such a thing would at once convict himself of very grave misconduct. Regarding the relative costs of arbitration and litigation, he himself had come across arbitration which had cost much more than litigation because it was "full dress." He felt that as far as the members of the Institute were concerned, a great point was that if the activities of the Institute were to be extended there would have to be less of those "full-dress" cases. One of the most important things an arbitrator should be able to do was to accustom himself to sitting with out lawyers. It was his experience that for a person having an issue to settle, the only inducement for arbitration over litigation was the definite saving in cost. Otherwise he went to Court and got his money's worth in ceremony.

Mr. J. E. Yerbury said that he did not think that the lecturer and Major Watson had

d too little attention to the question of t. There were certain recognised rules ich arbitrators had to follow. His experi-e was that the average man would shun urts and would rather have his case set th in a private room. There would be an reased desire for arbitration when it was n that there was a decrease in the cost and speeding up of decisions.

THE PRESIDENT said that there had been a at deal of discussion about the costs of bitration and would like to assure them that e Council had had that well in view. A le of charges had been laid down by the stitution, and the smallest charge for arbi-tion was five guineas, which one or two ple had thought too low. Thus they could e that the question had been gone into very roughly.

CAPTAIN CRESWELL then replied briefly to the nts raised.

THE EARLY DAYS OF THE CHURCH

SIR BANISTER FLETCHER, V.-P.R.I.B.A., turing on Early Christian architecture at the ntral School of Arts and Crafts recently, said at in the whole of human history there was no enomenon so striking as the rise and progress the Christian faith and its spread through the ilised world. Originating in a humble sphere the community in Syria, a distant Roman ovince, it was, by the fourth century of its era, e recognised State religion of the Roman npire, in spite of opposition and persecution m the learning, wealth and power of the most lightened nations. The first Christian urches were of perennial interest as the fore-nners of all the wonderful developments in chitecture and craftsmanship devoted to the rvice of the Christian religion throughout the rld, and the style, both in respect to its pre-cessors and successors, illustrated the con-nuity of architectural development.

The Early Christians were poor at first—they d neither funds nor churches—and craftsman-ip, too, was at a low ebb. Paganism was ssing away and many of its temples were lling into disuse and so to ruin. These ruins came the quarries from which the Christian urch builders obtained material more or less ady for service. A study of their churches vealed long lines of columns with dissimilar afts, often supporting various types of pitals, surmounted by architraves formed of eces placed side by side to form a continuous ne, regardless of their variety of carved orna-ent. The detail was mixed, but the general fect was dignified and imposing, and led the e surely and directly to the sanctuary and the gh altar, the centre of Christian ceremonial. he purpose of Christian churches was to shelter congregation, in striking contrast to the pur-se of pagan temples, which was to shelter the atue of the god. The old style was thus apted to the new purpose with as little waste d as much economy as possible, and this in elf gave these churches a special character. he lecturer summarised the theories as to the igin of the basilican church plan, whether from e atrium of a Roman house, the scholæ or eeting-places for the learned, from the Roman asilica or hall of justice, or from the old pagan mple, each of which, he said, had its own dvocates.

Technical Teachers.

The annual conference of the Association of achers in Technical Institutions will be held is year at Plymouth, from Friday, June 3, Tuesday, June 7. The provisional pro-amme includes, in addition to the business the conference, a number of visits. Arrange-nts are being made to visit, amongst other aces, portions of Plymouth of historical and chitectural interest. Moorland and sea cursions are also being organised, and an portant feature will be an educational and dustrial exhibition in the Guildhall, from ne 4 to 10, inclusive.

THE LONDON SOCIETY

"THE MAKING AND UN-MAKING OF THE LONDON SLUMS."

ON Friday last, MR. MONTAGUE FORDHAM, M.A., Council Secretary of the Rural Reconstruction Association, delivered an interesting lecture on this subject to the London Society at St. John-street, MR. GEORGE DUCKWORTH, F.S.A., C.B., being in the chair. The lecturer said that he proposed to deal not with all the causes that had combined to create the London slums, but with one only—the influx of the people from the country to London—and then he would show how that drift could be turned back. The London slums began, he presumed, to be created in the fifteenth century, but the main modern cause of the modern condition began in the first thirty years of the last century. And it began not in the town but the countryside. It arose in this way. In those years the control of the farming industry passed into the hands of three classes: the landlord, the dealing and the financier classes; they had been tempted by the large natural profits of food production and agriculture in the hope of securing these profits for themselves. The dealers were the dominating factor. Dealing in farm produce at a profit was actually illegal up to 1844, but in 1800 Pitt, inspired no doubt by the new Economists of the English School, declared in a famous speech in the House of Commons that the action of dealers was not hostile to the national policy—then a new idea. Under the new system a class rapidly grew who bought from farmers below the market price, and with the help of the new country bankers held up the produce until they could sell it dear. The farmers, rapidly impoverished by this system, turned on the labourers and drove them down to a state of poverty and misery which, having relation to the wealth of the time, was unique in English history. There was a sort of general strike throughout the south of England at any rate. When this strike failed, the country people decided to leave the country and go to the towns or colonies. It was this that created the present troubles. In the last hundred years, on an average, somewhere about 1,000 country people have left the country week by week. Of these, perhaps half went to the towns and industrial centres and half to the colonies. London had received perhaps 100 strong, rosy-faced men every week for a hundred years. They represented perhaps to-day a country-bred population of 2½ millions. This migration could be studied in detail. There was a young man of the labouring class born about the year of the battle of Waterloo, who used as an old man to claim that he was the first to leave the Mordens in Cambridgeshire for London. It was in the reign of William IV that he walked up. He got a job in a yard, where there were horses, somewhere near where King's Cross Station now stands. A practical and intelligent lad, he made friends with the foreman, and whenever there was a vacancy in the yard he sent down to his own village for one of his relations. He was a voluntary migration agent.

The lecturer then proceeded to analyse the situation. Probably the larger proportion of these men came in at the top of the unskilled labour market; from these many went up. But in any case they crushed others out and down, and these men ground another layer of society down. Thus were created first overcrowding, then slums, and finally unemployment. Thus were the slums made: now to un-make them we had to turn the stream back, to withdraw the pressure on the towns.

It was easy to minimise the importance of this problem; on the other hand, it is well to remember that it was the very condition that appeared to have destroyed earlier civilisations, probably Babylon, certainly Rome. The peasantry drifted into the towns, they created first slums and then unemployment. The Government adopted the policy of "panis" and "circuses": bread and entertainments. "Doles" and free cinema entertainments for the children of the unemployed were, he was informed, a feature of the life of some towns to-day. How, then, were we to cure a tendency that had always succeeded in its destructive course in the past? There were four new elements in this civilisation that made it possible—he wished, said the lecturer, he dared say probable. The first was electricity, which made it possible to decentralise industry; the second was the fact that under modern conditions we could somewhere about double food-production in our own country at prices well below present ones. The third cause was intellectual: we knew all about the economic and social questions involved, and we knew how to deal with them—we had built up in the last forty years a complete new learning. And, finally, we had developed an entirely new power, he would venture to call it Communal Free Will: the power to think out and work out and carry out a new constructive policy.

Now supposing we could take advantage of these new elements in life, what exactly had we to do? We had to restore the balance between agriculture and industry—only a partial remedy—and what was more important, we had to decentralise industry.

If we could do this, we could withdraw the 2½ millions of the people of London, who represented the rural influx of the last hundred years. Then we could un-make the slums; we could raze them to the ground and turn them into open spaces. That was the way to unmake the slums.

The lecturer then dealt with agriculture, an important but not an all-important element in our problem. Agriculture was important because it was, firstly, the only employment in this country that could find work at good wages for a large number of men: the estimates varied from half a million to two millions; and secondly, because by the development of agriculture we could produce essential wealth on a very large scale with small relative expenditure of capital, at prices well below those that we were accustomed to doing to-day. This would perhaps prove a little puzzling, but it was true. We knew, then, definitely how to solve that problem, and when we had solved it, there were plenty of men to come. Men who had come from the country since the war and men who came before the war had made a little money and wanted to get back. There were also others: the English townsmen, judging from the war-time allotments, were born cultivators. The decentralisation of industry was also a fundamental element. "We used to say," said Mr. Borlase Matthews, the great electrician, "that trade follows the flag. We might say to-day that it follows the electric main." The essential feature of an intelligent decentralisation policy was the distribution of electricity and cheap electricity right through the country. Then we could put our new towns, with electrically-driven industries in a large number of cases, anywhere we liked, provided we had the electric mains.

Now what was the position of our civilisation? We knew from our knowledge of history, of economics and sociology how to solve this particular problem. Everything had been carefully explored, analysed and re-analysed. Had we learnt the solutions too late? He did not know, but there were some things to be seen that suggested a hope. He had seen hundreds of square miles of the countryside reconstructed in England under the limited powers given by the Small Holdings Acts. He had seen a new life and a new civilisation created. It was done by country-people.

If, then, they had the balance of political power, they might be able to use it to the national advantage. If so, we might yet restore agriculture to its natural position in the national life, decentralise industry, and reduce the pressure on the great towns. In fact, reverse the policy of the last hundred years—and, incidentally, empty the slums.

THE LONDON BUILDING ACTS AND THEIR APPLICATION.—XI

By H. V. MILNES EMERSON, A.R.I.B.A.

Section II of the Report of the London Building Acts Committee deals with the Height of Buildings and Open Spaces about Buildings.

10. That there is urgent necessity for some regular system in place of the present conflicting rules. That certain rules are necessary while others unfairly differentiate between similar classes of buildings.

11. In large parts of London there is great encroachment on light and air owing to the present right (with a few exceptions) to build to a height of 80 ft. On any site occupied by old buildings and in any old footway or cartway, even though the old buildings are but a few feet high, special enactment should be directed to restricting this encroachment, especially as limitations which might operate, owing to the claim of light and air, can be negatived by agreement between owners on either side of narrow streets.

Note.—See Section 49 in last issue and the last paragraph of note to same.

12. That in any case an existing old building should be allowed to be rebuilt to the existing height.

13. Private interests of building owners should not outweigh the public interests in seeing that adequate light and air are provided in every street.

14-17. With few exceptions in old or new streets with a width of 50 ft., buildings can be erected 80 ft. high, equal to about 1½ times the width of street, and this is suggested as a reasonable proportion of height in general cases. This would mean a slight increase in new streets, but would restrict the height in narrow old streets; such restrictions are specially and urgently necessary. A loss of building development would be entailed in narrow streets, but permission should be given for an increased height in wide streets as above mentioned. The City of London to retain its present privileges and exemptions from the suggested restriction on height in narrow streets.

18. That while under Paragraph 4 the L.C.C. should have power in new streets to lay down a building line beyond which buildings may not be erected, this sacrifice of building land might be set off somewhat by the slight increase on height of buildings.

19. The L.C.C. to retain power to grant increased heights in special situations.

20. That the present obligation to serve notice on every owner within 100 yds. of a building proposed to be increased over statutory height, should be abandoned or a public notification only given.

21. Section 40 of the London Building Act, 1894, should be modified so that no basement area need be provided where the rear of the site abuts on a street and all basement rooms are adequately ventilated.

22. Section 41 should be amended so that the area at the rear of all domestic buildings shall be 150 sq. ft.

23. The restriction with regard to working-class dwellings in Section 13 (5) should be omitted and all domestic buildings should be dealt with on the same basis.

24. Whether a domestic building does or does not abut on a street, air space at the rear should be provided.

25. In new streets a back passage or some other means of access to the rear of rows of buildings should be provided.

Note.—As practically the whole of the undeveloped land in the County of London has been scheduled under the Town Planning Act, which restricts domestic buildings to twelve to the acre, the foregoing provision in this case would hardly be necessary.

26. The requirement that plans of working-class dwellings which do not abut upon a street shall be submitted to the London County Council for approval of air space, should apply to all domestic buildings in such situations.

27. Bedrooms with top light only should be forbidden.

28. Under Section 45 a bedroom window may open into a long, narrow court; this section should be reviewed on the lines that the window should be in such a position that at least the centre of the room should be adequately lit. It should be made clear that only one window of each bedroom need comply and not every one.

29. Permission to extend a frontage 40 ft. down a narrow street is hardly sufficient for modern requirements; 50 ft. is suggested.

Section III of the London Building Acts Committee deals with Materials and Construction and before proceeding with Part VI of the Act (Construction of Buildings), it would be advisable to quote their suggestions upon this part of the Act.

Paragraph 30. Many of the provisions of the present constructional clauses are obsolete.

31. London should be in a position to deal directly with technical matters, such as thickness of walls, coverings of roofs, &c., instead of having to obtain Parliamentary sanction for every detail.

32. That the argument that fixed rules of construction are elements of security for buildings and property owners, that alterations in the law are not conducive to economy in building operations, and that while the L.C.C. have power to grant exemptions and modifications in the majority of cases the needed elasticity is provided, does not appear conclusive.

Note.—The following appears in the R.I.B.A. *Journal*, March 19, 1927: The L.C.C. have resolved: "As regards the objection raised by the Ministry of Health, that a power of waiver applied to single regulations would result in a tendency to postpone the difficult and important task of bringing the main regulations up-to-date and to rely upon working upon continual waivers until the regulations did not really govern the matter, we have asked all Committees concerned to secure that, if the exercise of a power of waiver becomes so frequent as, in effect, to make regulations more honoured in the breach than the observance, the amendment of the regulations shall be undertaken."

It is hoped that this will result in the early issue of the revised Reinforced Concrete Regulations and the amendment of the Building Acts which have been so long under consideration.

33. If laws are obsolete it seems useless to keep them on the Statute Book, particularly if unnecessary delay and expense are involved for automatic consents.

Note.—See leading article in *The Builder* on "A Suggested Change in Building Law," February 11, 1927, and report of lecture by Professor Reilly on "Developments in Building Methods," in same issue.

34. Procedure by "by-laws" or "regulations" seems antiquated as regards London.

35. The questions of construction of buildings and materials to be used are substantially technical matters which are of vital interest to the architect, engineer, builder and property owner.

36. Under the procedure of by-laws and regulations, however, none of these four interested classes are party to the initial framing of the law, which is only disclosed when it is practically in a completed shape. Parliament should be asked to give the L.C.C. the privilege to amend rules of construction and building materials if exercised by all parties concerned openly and freely. If this were done the L.C.C. could from time to time rid itself of a great deal of unnecessary work in the way of applications and consents and building work could be expedited.

37. The L.C.C. should be empowered to set up an Advisory Board on which architects, engineers, builders, and property owners should be represented to frame from time to time rules for construction and building materials. When these rules are sanctioned by the L.C.C. they should become binding on the public.

38. The Advisory Board should always meet in public and may consider amendments put forward by any interested party who may also, on invitation, appear in support or opposition.

PART VI.—CONSTRUCTION OF BUILDINGS.

Section 53.—Subject to any by-laws of the Council made in pursuance of this Act, walls shall be constructed of the substances and in the manner and of not less than the thickness prescribed by this Act or mentioned in the First Schedule of this Act.

Note.—The Schedule applies to walls built of bricks not less than 8½ in. long, or of stone or other blocks of hard and incombustible substance, the beds or courses being horizontal.

1. Every building . . . shall be enclosed with walls . . . and the footings shall rest on the solid ground or upon concrete, or upon other solid substructure. (The District Surveyor has complete power over the foundations of chimney shafts, but otherwise footings and foundations are subject to by-laws.) The Ministry of Health dispenses with footings to walls of houses, and sanction can be obtained from the L.C.C. to omit brick footings under these circumstances. It may be noted that whilst the general public have to put footings to the walls of buildings, such footings are usually omitted from all classes of buildings erected by the Crown.

2. This deals with the bonding, &c., of walls.

3. Walls not built of brick, stone or other hard and incombustible material laid in horizontal beds or courses shall be one-third greater than the thickness prescribed.

Note.—In districts outside London all stone walls, &c., are usually required to be one-third thicker than brick walls.

4. The thickness of any wall of a dwelling-house if built of materials other than those before specified shall be deemed to be sufficient if made of the thickness required by Parts I and II of this Schedule, or of such thickness as may be approved by the Council.

Note.—If you wanted to build "cob" walls to a dwelling house, the thickness of same would probably be equal to those of the warehouse class under Part II of the Schedule.

5. When hollow walls are constructed there shall be a wall on one side of the hollow space of the full thickness prescribed by this Act.

Note.—Houses of two floors erected outside London can be constructed with hollow walls formed with two half brick walls and a 2 in. cavity between. Why it should be necessary to have a 9 in. and a 4½ in. wall for a similar building in London is not readily understandable and an alteration should be made when the Act is amended.

6. Heights of stories.—The mode of measurement is plainly set out.

7. Height of external and party walls.—For the purpose of determining the thickness of a wall the height of such wall shall be measured from the base of the wall to the top of the topmost story whether such wall is carried to the full height or not, or in case of a gable when there are no stories in the roof to half the height of the gable.

Note.—If a two-story house is erected, the height of the external and party walls would be measured from the base of the wall to the top of the first story, and the wall (8½ in.) would be regulated by this height. If, however, you put a story, say, wholly in the roof, the height would be measured from the base of the wall to the top of the topmost story (the second story) and "the wall shall be 13 in. thick below the topmost story, and 8½ in. thick for the rest of its height." This means that the external and party walls for the ground and first floor must be 4½ in. thicker, although practically no extra weight is carried. Application can be made to the L.C.C. to use 9 in. walls throughout for houses with the third story in the roof. This is one of the waivers where the present regulation will probably be amended.

RCHITECTS' & BUILDERS' INQUIRY BUREAU

e are glad to give questions and answers, but cannot pt responsibility for contributed replies, especially on l matters.

*y we appeal to our correspondents to submit their ies on paper of a size easily filed, and written as bly as possible, or, better still, in typewriting!—*ED.

Rule of Thumb for Pricing Timber.

[REPLIES TO "TYRO," MARCH 11.]

SIR,—The replies to "Tyro" on this subject your last issue give systems of calculation ich require proportional variations from a ed basis, and considerable mental agility and culating ability. The following method has merit of being easily mastered :—

To the price per standard in £ add one-half ; duct 1 for every 32 in the addition, and the swer is price per cubic foot in pence. The ult is correct to a fraction of a penny.

mples (in issue of March 18) :— cub. ft.

1) Price per standard .. £25
Add one-half .. 12½
37½
Deduct 1 for every 32 .. 1
36½ = 3s. 0½d.

2) Price per standard .. £8 5 0
Add one-half .. 4 2 6
Say 12½
Deduct 1 for every 32 ½
12 = 1s. 0d.

3) Price per standard .. £20
Add one-half .. 10
30
Deduct 1 for every 32 1
29 = 2s. 5d.

4) Price per standard .. £60
Add one-half .. 30
90
Deduct 1 for every 32 3
87 = 7s. 3d.

J. BARRON.

SIR.—The quickest method of accurately icing a foot lineal of any scantling is as llows :—

Call the price in pounds sterling per standard decimal as, say, £30 per standard, the multi- lier is 0.3d. If £35, then the multiplier is 35d.

Take the sectional area of scantling in square ches as, say, 3 × 2 = 6 sq. in. sectional area. hese 6 sq. in. × 0.3d. = 1.8d. per lineal foot, ecause there are 23,760 ft. 1 × 1 in a standard, nd there are 240 pence in a £.

Add 1 per cent. to 23,760
237
nd you get 23,997

hich is 240 × 100.

If you want absolute accuracy, add 1 per cent.

Proof.—There are 165 cubic ft. in a Peters- urgh Standard, the cost of which is, say, £30. he sum then is :—165 × 12 × 12 in. = 165 × 44 × 0.3d. = 7128d. £29 14 0
Add 1 per cent. .. 6 0
£30 0 0 and so on.

I discovered this rule when checking large mber accounts in war time, and find it works mply and accurately. I never use a timber lculator now for it is easy to work out entally the value of any scantling near nough for any practical purpose, and any one an grasp the whole calculation without quiring a timber calculator to help, or even pencil and paper. I have found the rule ost useful, and that being the case I pass it n. hoping that it will give help to others.

G. W. ATKINSON, F.R.I.B.A.

Non-Sweating Plaster.

[REPLY TO MR. J. W. BUTLER, MARCH 11.]

SIR,—Does your correspondent mean the atural throwing off of the moisture in new work or the collection of condensation on the inside surface ? If the former, I have no faith in anything of a sealing nature where the moisture in the work cannot be driven through to the outer face. The water is there, and as it cannot penetrate the hygeian rock, it can only get out by the inner surface, and this it will do eventually, and with a rush, if an attempt has been made to seal the surface of the wall. In this I speak from bitter experience. If it is a matter of dealing with condensation, there is nothing better than a lime stucco finish to cope with it, though adequate ventilation can do much.

DANGER.

Demolishing Hollow Walls.

[REPLY TO "G.A.," MARCH 18.]

SIR,—The hollow wall pulled down had no openings where a damp course would have been used. I did, however, notice in particular the damp course to the walls immediately above ground level. This was found to be absolutely perished. The damp course in question was of asphalt, supplied in rolls, which was used to a great extent at that particular time. With regard to a damp course over openings in hollow walls, my opinion is that the only safe damp course for the purpose is 2 lb. or 3 lb. lead, and if that is too expensive stout zinc is far preferable to bitumen sheeting.

WELLER W. SANDELL.

"Cement-Stucco."

SIR,—I have frequently come across the term "cement-stucco." In these parts (Aberdeen) we never hear this expression, and the association of these words seems rather contradictory. The word "stucco" with us is used exclusively for plaster of Paris. Plaster of Paris and cement are opposed to one another, and I should be pleased to learn what meaning the expression "cement-stucco" is intended to convey.

A. B. C.

THE WEEK IN PARLIAMENT

WESTMINSTER, *Wednesday.*

Future of London Bridges.

MR. BALDWIN, the Prime Minister, informed Sir W. Davison and Sir G. Hume that His Majesty's Government had given most careful consideration to the Report of the Royal Commission on Cross River Traffic in London, presided over by Lord Lee. His Majesty's Government were prepared to make a grant from the Road Fund to the London County Council of 75 per cent. of the approved cost of reconstructing the existing Waterloo Bridge in the manner recommended by the Commission. The acceptance of the proposal to preserve Waterloo Bridge involved the provision of further facilities for cross-river traffic at Charing Cross. The Government were therefore inviting the London County Council and the Southern Railway Company to join with them in appointing engineers to examine the scheme for the double-decker road and railway bridge put forward by the Commission, and would be prepared to contribute to the scheme if, after examination of its engineering, financial and æsthetic aspects, it appeared satisfactory.

As regarded the proposed Ludgate Bridge, if the City Corporation decided to proceed with the scheme, the Government were prepared to make a grant on the same basis as the Government had contemplated in the case of the St. Paul's Bridge scheme, viz., 50 per cent. of the net cost of the road approaches. The Government also agreed with the Commission in thinking that the Victoria Dock-road was a scheme of urgent importance, and were prepared to make a grant on the basis of 75 per cent. towards its approved cost.

The other projects recommended by the Lee Commission were of varying degrees of urgency. The general financial policy of the country rendered it impossible, in the view of the Government, to accept the suggestion of the Commission to raise a large loan on the security of the Road Fund. Consequently, the rate at which those projects could be carried out must depend on the allocation which could be made each year from those revenues, due regard being had to the other claims on the Fund. In those circumstances, the Government had decided to authorise the Ministry of Transport to negotiate with the local authorities concerned on the basis of grants of a suitable percentage towards the execution of the remaining schemes as funds were available, the total expenditure on all the schemes dealt with in the Report being limited to a sum which, on the average of a series of years, would not exceed £1,000,000 a year. It was not intended to adopt the recommendation of the Commission for the constitution of a special traffic authority.

Output of Bricks.

Sir A. Steel-Maitland, Minister of Labour, informed Mr. T. Thomson that it was estimated that in 1913 there were in Great Britain 69,000 bricklayers in the building industry within the scheme of Unemployment Insurance, of whom 5,760 were recorded as unemployed at February 21, 1913 ; as compared with 71,090 insured at July, 1926, of whom 3,145 were recorded as unemployed at February 21, 1927. It was estimated that the output of bricks in Great Britain during the last twelve months was about 6,000 millions, as compared with something in the neighbourhood of 3,500 millions in 1913.

A Streatham Case.

Sir W. Lane Mitchell asked the Minister of Health whether he was aware that on the Streatham Vale estate, South Streatham, where some hundreds of houses suitable for the accommodation of the working classes were being erected, four of the streets were divided in half by an open stream known as the River Graveney, which crossed them at right angles and, as there were no bridges to carry the streets across the stream, a gap about 4 ft. deep was left in the middle of each roadway, causing danger to inhabitants on the estate and to the public ; that the London County Council were allowing the formation of the streets in question without insisting on the construction by the builders of such bridges ; and would he take steps to have the necessary bridges provided.

Mr. Chamberlain said that his attention had not been previously drawn to this matter. In London, control of the lay-out of streets was vested in the County Council, and it was for them to consider, so far as they might have powers, what measures to take in any case of that kind. He had no authority to intervene, but he was sending the Council a copy of the question.

Insanitary Houses.

Mr. Robinson asked the Minister of Health if his Department took any action in compelling, or had authority to compel, local authorities to reinstate insanitary houses at the expense of the owners of such property which was a menace to the general health of the public and the tenants in particular.

Mr. Chamberlain said that Part I of the Housing Act, 1925, contained the provisions enabling local authorities to secure the repair, maintenance, and sanitary condition of houses at the expense of owners, and provision was also made for their enforcement by order of the Minister of Health if after receiving a complaint and holding a local inquiry he was satisfied that there had been default on the part of a local authority.

Rural Housing.

Sir K. Wood informed Mr. Hurd that 96 rural district councils had so far made applications under Section 5 of the Housing (Rural Workers) Act, 1926, to be declared local authorities for the purposes of the Act.

Cost of Airmen's Houses.

Sir S. Hoare, Secretary for Air, informed Col. Woodcock that the average cost of the married airmen's quarters erected at Halton worked out at £561, exclusive of external services, such as roads, drains, &c. The accommodation consisted of two bedrooms, living-room, scullery, bathroom and sanitary facilities.

THE BUILDING TRADE

BY-LAWS RELATING TO BUILDINGS AND STREETS.—XII

STREETS.—III.

In our last article we were considering the observations of the Committee on Building By-laws on the laying-out of new streets and the making-up of the same preparatory to their adoption by the local authority and the recommendations as to some control by by-law at the laying-out stage and the measures to be adopted to give some measure of certainty as to the requirements at the subsequent stage of taking over, but we had not concluded the whole of the recommendations which apply to the laying-out stage. At this stage the Public Health Acts allow by-laws to be made with respect to the level width and construction of new streets, also as we have shown for the provision of secondary means of access where necessary for the removal of house-refuse, and the by-laws are limited in scope by the fact that they cannot go outside the statutory provisions. (As to this secondary means of access see the criticism of the Committee set out in our second article in Column 3.) The Committee considered the by-laws as contained in the model clauses, and came to the conclusion that although there was no particular reason why the level of streets should remain a by-law function there was no objection to it so remaining, and that as regards construction, for the reasons already given in our last article it should remain so, but as regards width the Report raises some very difficult questions.

The Committee considered that the width of streets proposed to be laid out should remain a by-law function, but that the authorising statutes should be widened so as to enable further and better by-laws to be made. The difficulty in dealing with this part of the Report arises from the fact that since the Report was issued there has been some very complicated legislation in connection with highways and streets, the Public Health Act, 1925, and the Roads Improvement Act, 1925, and it will be necessary to see whether these Acts touch any of the points raised by the Committee, but we think the most convenient course will be for us shortly to state what the recommendations were and then to see whether they are affected by the above statutes.

The Report states that as the law stood at the time the Committee were reporting it was doubtful, to say the least, whether a condition adopted by an owner that he will set back his building from the street or only erect a particular class of building is enforceable against him, or at any rate whether it would run with the land and bind a subsequent owner, and as the model forms of by-laws allow the width of a street to be reduced on certain conditions, as that the houses shall be set back, this is an important point. The Report states that by the combined operations of the Public Health (Building in Streets) Act, 1888, and the by-laws as to open space, substantially the desired result can be attained if the condition is that the buildings be set back, but that the Committee recommended that it would be more satisfactory if a clause were passed through Parliament making definitely binding any such conditions as are embodied in the model by-laws both against persons who have taken advantage of them and against subsequent owners of land, and to carry this a step further the Committee thought that something would be gained if by-laws could be made for fixing building lines in front of which buildings should not be placed, and they recommended the repeal of the Public Health (Building in Streets) Act. Then this passage is very important: "We think, therefore, that local authorities should be empowered by by-law to determine the set-back of buildings in new streets, and that any land required under such a by-law to be free from buildings should not afterwards be built upon. There would thus be two lines to be fixed by by-law, namely, the boundary of the street and the line of buildings, but this would in no way interfere with the principle of the existing by-laws. It would still be open to a local authority, and in many cases would be desirable, to follow the principle now embodied in the models and fix yet another line (less rigorous than the maximum street width), up to which a man might devote his land to the forecourts of his houses instead of to the street."

Before considering the new legislation with reference to the above recommendations, it is necessary to refer to one other subject dealt with in the Report. The Committee drew attention to the definition of what is a new street in the Public Health Acts (see section 157 of the Act of 1875) and observed that where the statutory definition failed was in regard to the conversion of an existing highway into a "new street" to which the by-laws shall apply, and, to some extent, in regard to piecemeal extensions of a street, as local authorities and developing owners have in the past had trouble in determining whether the erection of buildings in an existing road made it a "new street" or not, and this difficulty raised a doubt as to the expediency of the limit of length embodied in the model clauses as one of the conditions on which the width of streets may be reduced. The Committee indicated that the problem caused by the Act itself called for some solution, but they had not had evidence before them to enable them to suggest what the true solution should be, but possibly the matter would have to be left as one of interpretation to be settled under the revised procedure they had suggested (see article seven of this series).

Taking this latter point first, it will be found that it has been dealt with in section 29 of the Public Health Act, 1925, which enacts: "A street may be deemed to be a new street for the purpose of any by-laws of the local authority with respect to new streets, or of any provision in a local Act with respect to the width of new streets, notwithstanding that it is a continuation of an existing street." It will be seen that this section is merely declaratory, and by itself it would not effect the object the Committee desired, for, as it is stated in the explanatory Memorandum issued by the Ministry of Health, it lays down that the continuation of an existing street is to be judged by itself.

Section 30 has to be consulted to see how the by-laws can be made to apply. Subsection (1) of that section provides: "Where it appears to the local authority that the whole or any portion of an existing highway will be converted into a new street as a consequence of building operations which have been or are likely to be undertaken in the vicinity, the local authority may by order declare such highway, or such portion thereof as may be specified in the order, to be a new street for the purpose of the application thereto of their by-laws with respect to new streets, or of any of the provisions in a local Act with respect to the width of new streets."

The notice mentioned in this subsection has to be posted up in conspicuous places in the street affected, for a month before the order can take effect (see subsection (2)), and by subsection (3) the notice must state that an appeal will lie to quarter sessions at the instance of any person aggrieved. This appeal is given by section 7 of the Public Health Acts (Amendment) Act, 1907, as applied by section 7 of this Act.

There may be difficult questions raised in connection with this subsection, as we pointed out in an article on this part of the Act in our issue of November 13, 1925.

The memorandum of the Ministry states that this section was aimed at a difficulty illustrated by the cases of Devonport Corporation *v.* Tozer (1903, 1 Ch. 759), and Attorney-General *v.* Dorin (1912, 1 Ch. 369; *The Builder*, December 8, 1911), in which it was held that the by-laws contemplate something in the nature of a physical laying-out and not a metaphorical laying-out, and they relate to something done or contemplated to be done on the land which is to be the street (see per Romer, L.J., in Devonport Corporation *v.* Tozer, approved in Attorney-General *v.* Dorin); therefore the mere erection of a house on the land of the building owner, with a strip of land left unbuilt upon adjoining the street, was held not to constitute a laying-out of a new street.

It has always been held to be a question of fact whether a street has been laid out or not, and we pointed out in the above article on this part of the Public Health Act that section 30 gives no new definition of what shall constitute "conversion into a new street," by building operations "in the vicinity," and as there is an appeal from the order of the local authority to quarter sessions by a person aggrieved, it still is uncertain what questions can be entertained on this appeal. Will the question be decided according to the principles laid down in former cases and if not, what questions will be open to the appellant? How is he to show that his building operations, present or future, "in the vicinity" of the existing highway do not fall within this section? The subsection is so worded as to be certain to cause litigation.

Apart, however, from this question as to the interpretation to be placed upon the section at the time when the order is made when once the order has come into operation it will affect all persons building upon land abutting upon or adjoining the highway, for subsection (4) provides: "Upon an order under this section coming into operation, any person who shall commence to erect a new building upon land abutting on the highway, or portion of the highway, by the order declared to be a new street shall in relation to that land be deemed to be laying-out a new street within the meaning of the by-laws of the local authority with respect to new streets, or of any provision in a local Act with respect to the width of new streets." To this extent, therefore, the second point mentioned by the Committee has been dealt with by this section, and the by-laws will apply to extensions of existing streets but as we have shown, by-laws under existing statutes can only be made as regards level width and construction, so this section does not touch the first point raised by the Committee as to the set-back of buildings. This we shall refer to later, but it may be convenient here to notice the new statutory provisions as to width.

Section 31, subsection (1), of the Public Health Act, 1925, provides: Whenever application shall be made to the local authority to approve the plans of a new street in furtherance of any by-law or enactment requiring a plan to be submitted to the local authority, and such new street, in the opinion, will form (*a*) a main thoroughfare or a continuation of a main thoroughfare or means of communication between main thoroughfares in their district, or (*b*) a continuation of a main approach or means of communication between main approaches to their district, the local authority may, as a condition of approval, require that the new street shall be of such width as they may determine; but if the width exceeds by more than 20 ft. the maximum width allowed by the by-laws in force in the district, compensa-

tion for any loss or damage sustained may be claimed (see subsection (1)); whilst under subsection (3) any extra expense caused in the execution of street works owing to the width exceeding the by-law width shall be borne by the local authority.

By section 32, where a street is being laid-out on land abutting on an existing highway where buildings have been or are proposed to be erected on one side only, the local authority may, instead of requiring the owner to widen the street to the full by-law width, permit him to widen it to a less width (not less than half the by-law width), but notice of this order shall be sent to the owner of land on the opposite side of the street, and when he commences to build he must complete the widening of the street (see subsection (4)), but nothing in the subsection shall compel him to pull down any building he may have erected before the date of the order of the local authority under this section. The application of this section is entirely discretionary, and no appeal to a court of quarter sessions shall lie against an order made under it.

It would appear one of the cases where an absolute discretion should not be vested in the local authority, as in such a case it would appear to be unjust in almost any circumstances to lay the burden of the whole widening on the owner of property on one side of the road and to relieve the owner at the other side entirely from liability; but we are at the moment not discussing this Act, but only endeavouring to show its bearing upon matters considered by the Committee.

In our next article we must refer to the question raised in the Report of the Committee as to building lines.

RATING AND VALUATION ACT, 1925

There was a full meeting of the Central Valuation Committee (which has been constituted under Section 57 of the Rating and Valuation Act, 1925, to promote uniformity in valuation for rating purposes) at the offices of the Ministry of Health last week. The Committee generally approved a report prepared by the Executive Committee dealing with the following matters among others.

The Committee approved the view taken by the Executive Committee as to the method of assessing glasshouses used mainly for the growing of fruit and flowers for sale, viz., that such glasshouses should be regarded as agricultural buildings within the Act of 1925, and, therefore, as entitled to the 75 per cent. relief from rates accorded by that Act to such buildings.

The Committee considered the form of the annual reports to be furnished by the new Assessment Committees under the Act and made detailed suggestions for the information of the Minister of Health, who has to prescribe the form. The Committee further authorised the issue of a questionnaire to the new Assessment Committees for the purpose of getting reliable information with regard to the present practice in the assessment of various classes of special properties such as sporting rights, woodlands, tithe rent-charge, hospitals, coal mines. The Committee also authorised the Secretary to supply County Valuation Committees with a statement showing for each parish in each county the date of the last general re-valuation.

The Committee passed resolutions dealing with (*a*) the entries to be made in valuation lists in respect of properties the net annual value or rateable value of which includes, or is, a fraction of a pound; (*b*) the valuation of special properties extending into more than one rating area; and (*c*) the rating of sporting rights which are several from the occupation of, and reserved to the owner of, agricultural land. These resolutions will be forwarded as representations to the Minister of Health with a view to his circulating them, if he thinks fit, to the local authorities concerned.

The Committee also considered a report by the Executive Committee upon certain questions which have arisen in connection with the statement prepared by the Rating of Machinery Committee under section 24 of the Act of 1925. This report was adopted and will be forwarded to the Minister as embodying the views of the Central Valuation Committee.

The Committee referred the following matters to the Executive Committee:—

(*a*) The question of securing uniformity in the valuation of glasshouses throughout the country;

(*b*) The form of questions to be asked in returns under section 40 of the Act in relation to special properties;

(*c*) The effect of section 12 (9) of the Increase of Rent and Mortgage Interest Restrictions Act, 1920, upon resolutions (3) to (8) previously passed by the Committee;

(*d*) The method of deducting tithe rent-charge from the rents of farms in order to arrive at the gross value for rating purposes;

(*e*) The question whether any deduction, in respect of the cost of collection and voids, should be made from the gross rents of property let on weekly and monthly tenancies in order to arrive at the gross value;

(*f*) Whether possibility of subsidence should affect the gross value of properties;

(*g*) The assessment of "tied" farm cottages provided as part of the wages of agricultural labourers; and

(*h*) The assessment of land covered with water where it is included in larger hereditaments.

BUILDING TRADE WAGES

The Bovis Case.

The re-trial was begun of the action, heard in July last, in which Bovis, Ltd., builders, contractors, and decorators, of Upper Berkeley-street, W., claim from Mr. F. Thorne, late president of the London Master Builders' Association, and other members and officers of the Association, damages for alleged libel. The plaintiffs complain that in April, May, June and July, 1925, the defendants, on behalf of the Association, published circulars and other documents in which it was stated that the plaintiffs were in "wage rate default."

The defendants deny publication, and plead justification and privilege.

At the previous hearing Mr. Justice Horridge withdrew the case from the jury and directed a verdict for the defendants, for whom he entered judgment. The plaintiffs thereupon appealed, and the Court of Appeal in December last ordered a new trial.

A report of this case, which at the time of going to press had not been adjudicated, will appear in our next issue.

Mr. J. H. Thomas and Housing.

Mr. J. H. Thomas, M.P., speaking as chairman of the directors of the Co-operative Building Society at the annual meeting of the society in London on Saturday last, said he was very much afraid that owing to the natural anxiety of all Governments to justify themselves, there was cultivated an impression that the housing problem was "sort of solved." That was not only not true, but the working classes were still paying very heavily from time to time in many ways for the great housing shortage. The best authorities agreed that at the end of 1918 there was a clear definite shortage of a million houses in this country. The best experts estimated that to meet the ordinary requirements there should be built 100,000 houses annually. The latest Government figures showed that since the Armistice to November last year there had been only 786,000 houses built. So that not only had they not recovered anything of the million war-time shortage, but they had not built the number required for normal conditions.

SHORT COURSES FOR TEACHERS IN TECHNICAL, ETC., SCHOOLS, 1927

The Board of Education are making arrangements for the following short courses among others to be held in the summer of 1927 for teachers in recognised technical schools, art schools, junior technical schools, evening schools and institutes, etc., in England and Wales:—

1. Engineering Science, at Oxford.
2. Electrical Engineering, at Oxford.
3. Building Subjects, in London, viz.:
   - A. Building Science.
   - B. Building Construction and Drawing.
   - C. Painting and Decorating.
8. Gas Enginering and Gas Supply, in London.

Teachers who desire to attend any of these courses must make application to the Board of Education on Form 106e. U. as soon as possible, and in any case before April 13. The Board cannot undertake to consider applications submitted after that date. Applicants will be informed as soon as possible after that date whether they have been selected to attend. The selection will be made by the Board.

The courses on building subjects will be held in London from Monday, July 18, to Friday, July 29. They are intended for teachers or intending teachers of the above or allied subjects in technical schools and art schools. The class instructional work of the courses will be conducted at the Westminster Training College, the L.C.C. School of Building and other institutions, as set out in the detailed programmes, which will be sent to selected candidates.

A. Course on Building Science.—The primary aim of this course will be to familiarise teachers with the methods of instruction generally employed in the teaching of those principles of physics, chemistry, and mechanics that have an important bearing on modern building construction. The problems dealt with will relate to structural design, properties of building materials, and trade processes.
